"And on it said a *century* of prayers,
Such as I can, twice o'er, I'll weep and sigh."
Shakesp. Cymbeline, iv 2.

(2) A period of a hundred years.

"Though our joys, after some *centuries* of years, may seem to have grown older . . ."—*Hopes.*

2. *Fig.:* Any exceedingly long period of time. (*Colloquial.*)

"And fair maids mish'd *centuries* elaps'd,
When next a Roman lord out in the field."
Thomson, Liberty, pt. iii.

II. *Roman Antiq.:*

1. A division of the Roman tribes for the election of magistrates, the passing of laws, &c., on which the voting was by centuries.

2. A company of cavalry; a sub-division in the Roman army.

¶ *Centuries of Magdeburg:* An ecclesiastical history, arranged in thirteen centuries, compiled by a great number of Protestants at Magdeburg. (*Webster.*) Bacon also wrote a work on natural history, under the title of *Ten Centuries of Natural History*, it being divided into ten books, each containing one hundred short articles.

century-plant, *s.* The American Aloe, *Aloe americanus*, so called from its being formerly supposed to flower only once in each century.

* **ceorl,** *s.* [CARL, CHURL.]

cē'-pą, *s.* [Lat.]

Bot.: The common onion, *Allium cepa*.

cē-pā'-ceous, *a.* [Mod. Lat. *cep(a)*, *-aceus*.]

Bot.: Alliaceous, having an odour like that of onions or garlic.

* **cē-pĭv'-ŏr-ŭs,** *a.* [Lat. *cepa* = an onion; *voro* = to devour.] Feeding upon onions.

cĕph-ą-ō-lī'-ĭs, *s.* [Gr. *κεφαλή* (*kephalē*) = head; and *εἴλω* (*eilō*) = to roll or twist together, from the flowers growing closely together.]

Bot.: A genus of plants of the order Compositæ, one of the species of which, *Cephalis ipecacuanha*, a little creeping-rooted Brazilian plant, yields the well-known drug of that name. *C. ruelliæfolia* is possessed, and is used to kill rats and mice.

* **cĕph-ą-lą-cān'-thŭs,** *s.* [Gr. *κεφαλή* (*kephalē*) = head; *ἄκανθα* (*akantha*) = a thorn.]

Ichthy.: A synonym of Dactylopterus.

* **cĕph-ą-ăl'-gĭe,** *a. & s.* [Lat. *cephalalgia*, Gr. *κεφαλαλγιατός* (*kephalalgiatos*) = *κεφαλή* (*kephalē*) = head; *ἄλγος* (*algos*) = pain, to suffer pain.]

A. *As adj.:* Affected with, suffering from, or producing headache.

B. *As subst.:* A remedy for the headache.

"... *cephalalgics*, lethorics, epoplegmatics, as their several causes required."—*Swift: Tatler.*

* **cĕph-ą-ăl'-ў** (*Eng.*), **cĕph-ą-ăl-ą** (*Mod. Lat.*), *s.* [Fr. *cephalalgie*; Gr. *κεφαλαλγία* (*kephalalgia*) = headache; *κεφαλή* (*kephalē*) = head; *ἄλγος* (*algos*) = pain.]

Med.: The pathological name for the ache.

cĕph-ą-ăn'-thēr-ą, *s.* [Gr *κεφαλή* = head; *ἄνθηρα* (*anthera*) = an anther.]

Bot.: A genus of Orchids, three species of which are common in this country: *C. grandiflora*, *C. pallens*, *ensifolia*, and *rubra*. The flowers nearly regular white or red half-closed flowers with a saccate hypochil.

cĕph-ą-ăn'-thĭ-ŭm, *s.* [Gr *κεφαλή* = head; *ἄνθος* (*anthos*) = a flower.]

Bot.: The head or capitate inflorescence of a composite flower. (*Brande.*)

cĕph-ą-ăn-thŭs, *s.* [Gr *κεφαλή* = head; *ἄνθος* (*anthos*) = a flower.]

Bot.: A genus of plants, order Cinchonaceæ, called in North America Button-wood, *C. occidentalis* is a handsome shrub, with leaves opposite, or sometimes three in a whorl, and yellowish-white flowers in heads of the size of a marble. It grows in swamps from Carolina to Canada. The bark of the root is an astringent, and is often taken as a remedy in fevers.

cĕph-ą-ăr'-ĭ-ą, *s.* [Gr. *κεφαλή* = the head, from the form of the genus's flowers, and Lat. *herba*, sing. and pl.]

Bot.: A genus of plants, order Dipsaceæ, Teasel-worts. They are about ten species known, occurring in Middle Europe, Central Asia, and the Cape of Good Hope. They are mostly perennial herbs, a few only being annual. The flowers are white, yellow, or lilac.

cĕph-ą-ăs'-pi-dæ, *s. pl.* [From Mod. Lat. *cephalaspis* (q.v.), and *-idæ*, pl. affix.]

Paleont.: A family of fossil fishes of the Ganoidei, sub-order Ostracoderma. They commence in the Upper Silurian, but do not attain their Devonian period. [CEPHALASPIS.]

cĕph-ą-ăs'-pis, *s.* [Gr *κεφαλή* (*kephalē*) = head; *ἀσπις* (*aspis*) = a shield.]

Paleont.: A genus of ganoid fossil fishes found in the Old Red Sandstone rocks. The cephalic shield is prolonged behind into three acute projections, the two lateral ones produced backwards so as to make the head resemble "a saddle with its horns." The ornament with which leather-coat hunts are made is sometimes called Buckler-heads. The common one is *Cephalaspis Lyelii*. It occurs in Forfarshire.

cĕph-ăl-āte, *a.* & *s.* [Gr. κεφαλή (*kephalē*) = head.]

A. As adj.: Having a distinct head; belonging to the Cephalata (an old synonym of Cephalophora, q.v.).

B. As subst.: A mollusc having a head.

cĕph-ăl-ō-my-ī-ă, *s.* [*cf.* κεφαλή (*kephalē*) = head; μυια (*muia*) = a fly.]

Entom.: A genus of dipterous insects of the family Œstridæ, or Gadflies.

cĕph-ăl-ic, * cĕph-ăl-ick, *a.* & *s.* [Fr. *cephalique*; Gr. κεφαλικος (*kephalikos*) = pertaining to the head; κεφαλη (*kephalē*) = the head.]

A. As adj.: Pertaining to the head; useful as a remedy for pain in the head.

* *Cephalic* medicines are all such as attenuate the blood, so as to make it circulate easily through the capillary vessels of the brain. —*Arbuthnot On Aliments.*

B. As subst.: A medicine or remedy for pains in the head.

cephalic index, *s.*

Anat., Ethnol.: The ratio of the transverse to the longitudinal diameter of the skull.

cephalic snuff, *s.*

Pharm.: The name of an errhine powder, the chief ingredient in which is asaraloacetin.

cephalic vein, *s.* A vein running along the arm, so called because the ancients used to open it for disorders of the head.

† **cĕph-ăl-ĭc-tic,** *a.* [Gr. κεφαλή (*kephalē*) = the head.] Belonging to or situated in the head.

cĕph-ăl-ī-tis, *s.* [Gr. κεφαλή (*kephalē*) = the head, and med. suff. *-itis* (q.v.).]

Med.: Inflammation of the brain or its investing membranes.

cĕph-ăl-i-zā-tion, *s.* [Gr. κεφαλή (*kephalē*) the head.]

Biol.: A word first used by J. Dana to indicate the tendency in certain animals to have their forces localised in or near the head.

"This centralization is literally a *cephalization* of the forces. In the higher groups, the larger part of the whole structure is centred in the head. —*Dana Crustacea*, pt. ii., p. 1,307.

cĕph-ăl-ize, *v.t.* [Gr κεφαλή (*kephalē*).]

Biol.: To cause cephalization in (an animal) of its limbs).

cĕph-ăl-ō, *in comp.* [Gr. κεφαλή (*kephalē*) = head.] Pertaining to the brain.

cephalo-branchiata, *s. pl.*

Zool.: The same as Tubicola (q.v.).

cephalo-branchiate, *a.*

Zool.: Having branchiæ (gills) upon the head. Example, the Serpulæ in the class Annelida.

cĕph-ăl-ō-dĭd-ine, *a.* [From Gr. κεφαλή (*kephalē*) = a head, *d* euphonic, and Eng. suff. *-ine.*] Forming a head. (*R. Brown*, 1874.)

* **cĕph-ăl-ō-gŏ-rŏph-ỹ,** *s.* [Gr. κεφαλή (*kephalē*) = head; λογος (*logos*) = a discourse; γραφω (*graphō*) = to write.]

Anat.: A description of the head.

† **cĕph-ăl-ōid,** *a.* [Gr. κεφαλή (*kephalē*) = head; ειδος (*eidos*) = form.] Head shaped.

cĕph-ăl-ŏl-ŏ-gỹ, *s.* [Gr. κεφαλή (*kephalē*) = head, and λογος (*logos*) = a treatise.]

Anat.: A treatise on the head.

cĕph-ăl-ŏm-ĕ-tēr, *s.* [From Gr. κεφαλή (*kephalē*) = the head, and μετρον (*metron*) = a measure.] An instrument for measuring the size of the fetal head during parturition.

cĕph-ăl-ŏph-ŏr-a, *s. pl.* [From Gr. κεφαλή (*kephalē*) = the head, and φορεω (*phoreō*) = to bear.]

Zool.: A sub-class of molluscs containing those which possess a distinct head. They are called also Eucephala.

cĕph-ăl-ŏph-ŏr-oŭs, *a.* [From Mod. Lat. *cephalophor(a)*, and Eng. suff. *-ous.*] Pertaining to or of the nature of the Cephalophora.

cĕph-ăl-ō-phŭs, *s.* [Gr. κεφαλή (*kephalē*) = the head, and λοφος (*lophos*) = crest.]

Zool.: A genus of Antelopes, peculiar to tropical or southern Africa. The males have horns which are short, straight, simple cones, slanting backwards, and a long tuft of hair (whence the name) directed backwards behind the ears. They are known as Bush-bucks, and there are several species, the smallest, the Pigmy Bush-buck, being no bigger than a rabbit. The better form Cephalolophus is gaining ground.

cĕph-ăl-ŏp-ŏd-a (*Lat.*), **cĕph-ăl-ō-pŏds** (*Eng.*), *s. pl.* [Gr. κεφαλή (*kephalē*) = head, and ποδς (*pous*), genit. ποδος (*podos*) = a foot.]

1. *Zool.:* A class of molluscs, characterized by a distinct head, surrounded by a circle of long arms or tentacles, used for crawling and seizing objects. It includes the Argonaut, Octopus, Cuttle-fish, &c., with the fossil Belemnites and Ammonites. They are furnished with two large eyes, and mostly with an internal shell. They swim with the head backwards. The Nautilus and Spirula form the living types of hundreds of species which have become extinct, and the remains of which are found in great abundance in secondary strata; they occur also in the Palæozoic formations. [Ammonite.] The Cephalopoda are divided into two orders: Dibranchiata, containing those which have two branchiæ only, and Tetrabranchiata, or those which have four branchiæ.

Cephalopod.

2. *Paleont.:* The order Tetrabranchiata comes first in time, appearing in the Lower Silurian rocks, attaining its maximum in Palæozoic times, and decreasing through Mesozoic and Cainozoic periods till now its solitary representative is the genus Nautilus. The order Dibranchiata began with Mesozoic epoch and has since increased, reaching its maximum in the present day. (*Nicholson.*)

cĕph-ăl-ŏ-pŏde, *s.* [Fr. *céphalopode*, from Gr. κεφαλή (*kephalē*) = head, and ποδς (*pous*) = a foot.]

Zool.: A mollusc of the order Cephalopoda.

cĕph-ăl-ŏ-pŏd-ic, *a.* [Eng. *cephalopod*, and suff. *-ic.*] Pertaining to or of the nature of cephalopods.

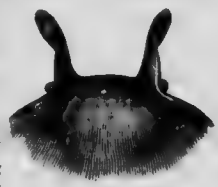
cĕph-ăl-ŏp-ŏ-dous, *a.* [Eng. *cephalopod*, and suff. *-ous.*] The same as Cephalopodic.

cĕph-ăl-ŏp-tēr-o, *s.* [Gr. κεφαλή (*kephalē*) = head, and πτερον (*pteron*) a feather, a wing.]

Ichthy.: A genus of fishes, the typical one of the family Cephalopteridæ (q.v.). *Cephalopteron giorna* is large in size. It occurs in the Mediterranean.

cĕph-ăl-ŏp-tēr-i-dæ, *s. pl.* [From Mod. Lat. *cephalopter(o)* (q.v.), and fem. pl. adj. suff. *-idæ.*]

Ichthy.: A family of fishes, sub-order Plagiostomata. The jaws have many small teeth and the tail a long barbed spine. The head looks horned from its having two small projecting appendages; hence the name Cephaloptera.



Head of Cephaloptera.

cĕph-ăl-ŏp-tēr-ŭs, *s.* [Cephaloptera.]

Ornith.: A genus of the Coracinæ or Fruit-crows, family Corvidæ, having an enlarged crest of feathers on the head, which advances in front and overshadows the bill. *Cephalopterus ornatus* is the Umbrella bird of Brazil.

cĕph-ăl-ŏt, *s.* [Gr. κεφαλή (*kephalē*) = the head.] The same as *cerebrot* (q.v.).

cĕph-ăl-ŏ-tă-cē-æ, *s. pl.* [Mod. Lat. *cephalotā(us)*, and Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: The Australian Pitcher-plant, *Cephalotus follicularis*, a curious herb, with radical leaves, which is a plant of very doubtful affinity, has been considered provisionally as a distinct family under this title. It has a very short or contracted stem, with spoon-shaped stalked leaves, among which are mingled small pitcher-like bodies, placed on short stout stalks, and closed at the top like the true pitcher-plants (*Nepenthes*). These pitchers are of a green colour, spotted with purple or brown, and provided with hairs.

cĕph-ăl-ŏ-tăx-ĭne, *s.* [Gr. κεφαλή (*kephalē*) = a head (referring to the clusters of the male flowers); Lat. *taxus* = a yew.]

Bot.: A genus of Coniferous plants, belonging to the family Taxaceæ. They are nearly allied to the *Taxus* or Yew: several habit, foliage, and essential characters. There are four or five species known, all from Japan or North China. One, *Cephalotaxus Fortunei*, is frequently found in our collections of Conifers.

cĕph-ăl-ŏ-tēg, *s.* [Gr. κεφαλή (*kephalē*) = a head, ους (*ous*), genit. ωτος (*ōtos*) = an ear.]

Zool.: A genus of mammiferous animals, natural order Cheiroptera, with conical head, ears short, and tail but little apparent.

cĕph-ăl-ŏ-thŏr-ax, *s.* [Gr κεφαλή (*kephalē*) = head; θωραξ (*thōrax*) = chest.]

Entom. & Zool.: The name given to the first division of the body of the Arachnida and Crustacea, consisting of the head and chest united.

cĕph-ăl-ŏ-tome, *s.* [From Gr. κεφαλη (*kephalē*) = head, and τομος (*tomos*) = cutting.]

Surg.: An instrument for cutting into the fetal head, to assist its forcible contraction and facilitate delivery.

* **cĕph-ăl-ŏt-ŏm-ỹ,** *s.* [Gr κεφαλή (*kephalē*) = head, τομη (*tomē*) = a cutting, τεμνω (*temnō*) = to cut.]

1. *Anat.:* The dissection of the head.

2. *Midwifery:* The removal of the brain of a child impacted in the pelvis.

cĕph-ăl-ŏ-tribe, *s.* [Gr. κεφαλη (*kephalē*) = head; τριβω (*tribō*) = to rub away, to crush.] An obstetrical instrument for crushing the head of the child in the womb, in order to facilitate delivery. (*Webster.*)

cĕph-ăl-ŏt-rĭ-chŭm, *s.* [Gr. κεφαλη (*kephalē*) = the head; θριξ (*thrix*), genit τριχος (*trichos*) = hair.]

Bot.: A genus of Dematiei (hyphomycetous Fungi). *Cephalotrichum cerium* is an extremely minute plant growing upon the leaves of sedges, with scattered short, brown, erect filaments, bearing somewhat globular heads composed of tufts of forked or ternate branches, with one or two short acute branchlets, slightly scabrous, bearing smooth spores. (*Griffith & Henfrey.*)

cĕph-ăl-ō-thŏ-rax, *s.* [Gr. κεφαλή (*kephalē*) = a head.]

Bot.: A genus of very singular dwarf pitcher-plants, of which only one species is known, *Cephalotus follicularis*, a native of swampy places in King George's Sound. [Cephalotaceæ.]

† **cĕph-ăl-oŭs,** *a.* [Gr. κεφαλ(ή) (*kephal[ē]*) = head; Eng. suff. *-ous.*]

Zool.: Having a head, applied principally to a division of Mollusca, the Cephalata, which includes the Univalves, &c. (*Dana.*)

cĕph-ăl-ŭs, *s.* [Gr. κεφαλωτός (*kephalōtos*) = furnished with a head.]

1. *Ichthy.:* A genus of Cod-fishes (Gadidæ), in which the head is remarkably large, depressed, and broad.

2. *Entom.:* A genus of dipterous insects.

Çē-phe-ŭs, *s.* [Named after the husband of Cassiopeia and father of Andromeda.]

Astron.: A constellation in the Northern hemisphere, lying between Cassiopeia and Draco. In the British Catalogue thirty-five stars are enumerated.

çē-phŭs, *s.* [From Gr. κηφην (*kēphēn*) = a drone.]

Entom.: A genus of Hymenopterous insects, of the family Xiphydriidæ. Mr. Stephens enumerates ten species of this genus occurring in Britain. *Cephus pygmæus* is common in flowers, particularly buttercups.

çē-pē lą, *s.* [Lat. = a small onion, a chive.]

Ichthy.: A genus of anguilliform fishes, order Thoracica, having the head roundish, compressed, teeth curved, gill-membrane with six rays; body ensiform and naked.

çē-pŏl'-i-dæ, *s. pl.* [From Mod. Lat. *cepola*, and fem. pl. adj. suff. *-idæ.*]

Ichthy.: Band-fishes, a family of fishes in which the body is very long, compressed, and ribbon-like. Genera Cepola, Gymnetrus Trichiurus, &c. Some are British.

*** çēp'-tēr, * çēp'-tre, * çēp'-tyr,** *s.* [SCEPTRE.]

*** cep-tur-ĭt,** *a.* [SCEPTRED.]

*** çēr-ā'-çē-ous,** *a.* [Lat. *cer(a)* = wax, and Eng. suff. *-aceous.*] Pertaining to or made of wax; like wax in appearance. Specially in botany. (*Brande.*)

çēr-ā'-dī-ą, *s.* [From Gr. κηρός (*kēros*) = bees-wax, and ἀδήν (*adēn*) = a gland.]

Bot.: Ceradia furcata, a half succulent plant from the most barren part of South-west Africa, yields African Bdellium. It is a brittle, resinoid substance, fragrant when burned, and must not be confounded with ordinary Bdellium. (*Lindley.*)

çēr'-ā-gē, *s.* [Lat. *cera* = wax. Second element in the compound unknown.] Bee-bread, a substance consisting principally of the pollen of flowers, and used by bees for food.

çēr'-ą-ĭn, çēr'-ą-īne, *s.* [From Lat. *cera* = wax, and Eng., &c. suff. *-in, -ine* (*Chem.*) (q.v.).]

Chem.: The part of beeswax which is sparingly soluble in alcohol and not saponified by potash.

çē-răm bўc'-I-dæ, *s. pl.* [Lat. *cerambyx*, genit. *cerambyc(is)*; suff. *-idæ.*]

Entom.: A family of coleopterous insects, which have the head large and vertical, the jaws sharp and strong, the tarsi prehensile, and the thorax nearly as broad as the body. They live upon solid or decayed wood, both in their larva and perfect states.

çē-răm'-bўx, *s.* [Lat. *cerambyx*; from Gr. κέρας (*keras*) = a horn, and ἄμβυξ (*ambux*) = a cup, from the form of the joints of the antennæ.]

Entom.: A genus of Coleoptera, or beetles, the typical one of the family Cerambycidæ. They are widely distributed all over the world, but mainly in hot countries. The Musk Beetle (*C. Moschatus*) is found on willows in England. It has a strong but agreeable odour, somewhat resembling that of attar of roses.

çē-răm-I-ā'-çē-æ, *s.pl.* [Lat. *ceramii(um)*; fem. pl. suff. *-aceæ.*]

Bot.: An order of Florideous Algæ. Rose-red or purple sea-weeds with a filiform frond, consisting of an articulated, branching filament, composed of a single string of cells, sometimes coated with a stratum of small cells. (*Grif. & Henfrey.*)

çē-răm'-ĭc, *a.* [Gr. κεραμικός (*keramikos*) = pertaining to pottery; κέραμος (*keramos*) = a potter.] Of or pertaining to pottery, or the art of pottery.

çē-răm'-ĭcs, *s.* [CERAMIC.] All the varieties of baked or burnt clay. It is distinguished from *vitrics*, in which silex predominates, the result being glass.

çēr-ąm-ĭd'-I-ŭm, *s.* [A dimin. from Gr. κεραμίον (*keramion*) = a pitcher.]

Bot.: A name given to the globose-ovate or conical capsule of rose-spored Algæ. Examples are afforded by Laurencia.

† çēr'-ą-mist, *s.* [Eng. *ceram(ic); -ist.*] A maker of pottery or earthenware; a potter.

çēr-ā'-mi ŭm, *s.* [Gr κεράμιον (*keramion*) = a little pitcher, from the shape of the capsules.]

Botany:

1. A genus of marine, rose-spored Algæ belonging to the order Ceramiaceæ. The tips of the filaments are incurved. Several species occur on our coasts, *Ceramium rubrum* being especially common.

2. A synonym of Didymochlæna, a peculiar genus of South American Ferns. (*Treas. of Bot.*)

çēr'-ą-pūs, *s.* [From Gr. κέρας (*keras*) = horn, and πούς (*pous*) = a foot.]

Zool.: A genus of Amphipodous Crustaceans. *Cerapus tubularis*, the Caddis-shrimp, occurs among Sertularia in the sea, near Egg harbour in the United States.

çēr-ar'-gўr-īte, *s.* [Gr. κέρας (*keras*) = a horn; ἄργυρος (*argyros*) = silver, and Eng. suff. *-ite* (*Min.*).]

Min.: A mineral of a pearl-grey, greyish-green, or whitish colour; transparent. Composition: Chlorine, 24·7; silver, 75·3. It is found principally in Peru, Chili, and Mexico.

çēr'-ą-sĭn, çēr'-ą-sīne, *s.* [Lat. *cerasu(m)* = a cherry, and Eng. suff. *-in, -ine* (*Chem.*).]

1. *Chem.:* The portion of the gum of the cherry, plum, and other trees, insoluble in water.

2. *Min.:*

(1) A mineral, the same as Mendipite (q.v.).

(2) Cromfordite (q.v.).

† çē-rās'-I-nē-ŭs, *a.* [From Lat. *cerasium* = cherry-coloured.]

1. *Ord. Lang.:* Cherry-coloured.

2. *Chem.* Pertaining to cerasin.

çēr'-ą-sīte, *s.* [Lat. *cerus(us)* = a cherry, and Eng. suff. *-ite* (*Min.*).]

Min.: Native muriate of lead.

çēr-ăs'-tēs, *s.* [Gr. κεράστης (*kerastēs*) = horned, from κέρας (*keras*) = a horn.]

1. *Ord. Lang.:* A horned serpent, *Cerastes horridus.*

"Scorpion, and asp, and amphisbæna dire,
Cerastes horned, hydrus, and elops drear."
Milton: P. L., x. 525.

2. *Zool.:* A genus of Indian and African vipers, remarkable for their fatal venom, and for two little horns or pointed bones placed over each eye. They are of a livid grey colour, and have a most terrific appearance.

HEAD OF CERASTES.

çē-răs'-tī-ŭm, *s.* [Gr. κέρας (*keras*) = a horn, from the shape of the capsules.]

Bot.: An extensive genus of Caryophyllaceæ, containing small, white-flowered plants, generally called Mouse-ear Chickweeds. The petals are generally bifid. The number of sepals, petals, and stamens varies; it is generally five in the two former, and ten in the staminal whorl. Several species occur in Britain. *Cerastium arvense* is a common English plant. (*Treas. of Bot.*)

çēr'-ą-sŭs, *s.* [Lat., from Gr. κέρασος (*kerasos*) = a cherry-tree.]

Bot.: The Cherry-tree, a genus of trees of the order Amygdalaceæ. Three species are British—(1) *Cerasus vulgaris*, called also *Prunus cerasus*, the Dwarf Cherry; (2) *C. Avium*, called also *Prunus Avium*, the Gean, and (3) *Cerasus Padus*, called also *Lauro-cerasus Padus* and *Prunus Padus*, the Bird Cherry. Hooker considers Nos. 1 and 2 mere varieties of each other. The first of these is generally supposed to have originated the Garden Cherry, and the second the Morella. The leaves, bark, and fruit of *Cerasus Lauro-cerasus* (the Common Laurel), and the oil derived from them, are virulent poisons, owing to the amount of prussic acid which they contain. For a similar reason *C. capricida*, of Nepaul, kills, as the Latin specific name imports, the goats of that region. *C. Padus* and *C. virginiana* have the deleterious property in less measure. All the species of Cerasus yield a gum analogous to gum tragacanth. The leaves of *Cerasus Avium* have been used as a substitute for tea. A variety of the same tree is used in the Vosges and in the Black Forest in the preparation of the liquor called "Kirschwasser." The kernel of *C. occidentalis*, a West Indian species, is employed in flavouring the liquor called "Noyau." The bark of *Cerasus virginiana* is prescribed as a febrifuge. So also is that of *C. capollin* of Mexico. [CHERRY.]

† çēr'-çēe, *s.* [Lat. *cerātus*, pa. par. of *cēro* = to cover with wax; *cera* = wax.] A pharmaceutical preparation of wax, oil, and some other substance made into a plaister.

*** çēr-ā'-tĕd,** *a.* [Lat. *cerātus* = waxed; *cēro* = to wax; *cera* = wax.] Covered with wax. (*Bailey.*)

çē-rā-tĭd'-I-ŭm, *s.* [Gr. κέρας (*keras*) = horn; εἶδος (*eidos*) = form, appearance.]

Zool.: A genus of Infusoria, of the Oxytrichina. It is furnished with cilia on the fore part of the body, but neither nor styles. One species, *Cerotidium tum*, Dujardin considered to have been ated Oxytricha. The appearance arises from the anterior part of the being deeply notched. (*Grif. & Henf*

*** çēr'-ą-tīne,** *a.* [From Gr. κερατίνη (*keratinē*) = the fallacy called the horn (*keras*) = a horn.] Sophistical.

çēr-ą-tī'-tēs, çēr'-ą-tī'-te, *s.* [Gr. κέρας (*keras*), genit. κέρατος (*keratos*) = and suff. *-ites* (*idæ*).] [ITE.]

Palæont.: A genus of Ammonitidæ, a discoidal shell, having lobed sutures the lobes oviculated. They exist from Devonian to the Cretaceous formation ring in Europe and India.

çē-rā'-tī-ŭm, *s.* [Gr. κεράτιον (*keration*) = dim. of κέρας (*keras*) = a horn.]

Botany:

1. A genus of Isariaceæ (hyphomycetous Fungi), containing a generally diffused plant, *C. hydnoides*, which grows on wood, has a tuft of white simple or branched prickle-like processes, which produce on their surface sterigmata (Berk.), each of which is surmounted spore which easily falls off. The whole readily collapses into a mucilaginous The cellular appearance figured by depends on the collapsing of the pe (*Grif. & Henfrey.*)

2. A kind of fruit, placed by Lindley his class Syncarpi. It is similar siliqua, but has no septum.

çēr'-ą-tō, *in compos.* [From Gr. κέρας (*keras*), genit. κέρατος (*keratos*) = a horn.] Pertaining to, or connected with a horn or horns.

cerato-branchial, *a.*

Comp. Anat.: A term applied by Owen in his Homologies to the long pō-ces supported by the bones which the lower extremities of the branchial in fishes.

cerato glossus, *s.*

Anat.: A name for the hyo glossus from its appearance and insertion in tongue. (*Mayne.*)

cerato hyal, *a.* Pertaining to the of the two chief parts of the hyoid bone

çēr'-ą-tō-çēle, *s.* [Gr. κέρας (*keras*) = κήλη (*kēlē*) = a tumour.]

Pathol.: A term for a hernia of the of the eye, consisting in the protrusion inner layer by the pressure of the humour at some point where the outer is destroyed by ulceration.

çēr' ą tōde, çēr'-ą tose, *s.* [Gr. κερατώδης (*keratōdēs*) = horn-like.] The horny or skeletal substance of sponge.

çēr ăt ō-dŭs, *s.* [From Gr. κέρας (*keras*), genit. κέρατος (*keratos*) = a horn; and ὀδούς (*odous*), genit. ὀδόντος (*odontos*) = a tooth.]

† çēr'-ĕ-bĕl (*Eng.*), **çēr-ĕ-bĕl'-lŭm** (*Lat.*), *s.* [Lat. *cerebellum* = a little brain, dim of *cerebrum* = a brain.]

1. *Anat.*: A portion of the brain situated beneath the posterior lobes of the cerebrum, and about one-seventh the size of the latter, from which it is protected by the *tentorium cerebelli*. It is composed of grey matter on the surface and white in the interior. In shape the cerebellum is oblong and flattened, largest from side to side and divided into two hemispheres, separated on the upper surface by the superior vermiform process; on the under surface there is a deep fissure termed the vallecula or valley, corresponding with the medulla oblongata. On making a vertical incision the arbor vitæ cerebelli is seen, the white central substance resembling the trunk of a tree with branches, branchlets, and leaves. Nearer the commissure than to the lateral border is a yellowish grey dentated line, the corpus rhomboideum, or ganglion of the cerebellum. The cerebellum is associated with the rest of the brain by three pairs of rounded peduncles or cords, the superior proceeding forwards and upwards to the testes, forming the anterior part of the lateral boundaries of the fourth ventricle with the valve of Vieussens between them; the middle, the largest, are lost in the pons varolii, and the inferior descend to the posterior part of the medulla oblongata, and form the inferior portion of the lateral boundaries of the fourth ventricle.

2. *Physiol.*: It is connected with the powers of motion, and is largest in those animals which require the combined effort of a great variety of muscles to maintain their usual position and execute their ordinary movements. It does not appear to affect voluntary power, or reflex movements, but chiefly combined motor action. According to Dr. Ferrier the cerebellum is the co-ordinating centre for the muscles of the eyeball. In the system of phrenologists, first propounded by Gall, it is the organ of the sexual instinct, and Dr. Carpenter says it seems not improbable that the lobes of the cerebellum are the parts specially concerned in the regulation of muscular movements, whilst the central portion may be the seat of the sexual sensations. This view is, however, not generally held.

çĕr-ĕ-brī'-tis, *s.* [From Lat. *cerebr(um)* = the brain, and Lat. & Gr. suff. *-itis*, denoting inflammation.]

Med.: Inflammation of the substance of the brain. Cerebritis may be either acute or chronic. The acute form of the disease runs a very rapid course and usually terminates fatally. The symptoms are as follows, viz., a deep-seated, violent, oppressive, and persistent pain in the head, with some feverishness and vomiting, pallor of the face, low and irregular pulse, depression of spirits, confusion of thought, then convulsions, loss of sensation, paralysis, coma, and death. Chronic cerebritis, to which the term ramollissement or softening of the brain is frequently applied, is usually of a local or partial character, and is consequently much slower in its progress. This form of the disease, which may or may not be a sequence of the acute, is characterised by certain well-marked symptoms such as loss of memory, failing intellectual powers with a consciousness of the decline, dull and protracted pain in the head, tingling or numbness in different parts of the body, impairment of the faculties of sight and hearing, and paralysis slowly increasing. Cerebritis is usually associated with meningitis, or inflammation of the membranes of the brain, and is then called Encephalitis. When this complication occurs the symptoms just described are of a more marked character. [BRAIN-FEVER.]

çĕr'-ĕ-brŭm, çē-rē'-brŭm, *s.* [Lat. *cerebrum* = the brain.]

1. *Anat.:* The higher and front portion of the brain, as opposed to the cerebellum, the hinder and lower portion. The cerebrum is composed of a number of convolutions externally, and divided superiorly by the great longitudinal fissure, containing the *falx cerebri*, and marking the original development of the brain (q.v.),

1. Cerebrum. 2. Cerebellum.

into two symmetrical halves, which are connected by a broad band of white substance, the corpus callosum. If either hemisphere be cut through, a centre of white substance will be found surrounded by a grey border, following the zigzag of the sulci and convolutions. Each hemisphere is divided into an anterior, middle, and posterior lobe; the anterior rests on the roof of the orbit, and is separated by the fissure of Sylvius from the middle lobe, which lies in the middle fossæ of the base of the skull, and is separated from the posterior at the ridge of the petrous bone; the posterior rests on the tentorium. On the middle line of the corpus callosum is the raphe, a linear depression, and a section on each side of it exposes the ventricles (q.v.) extending from one end of the hemispheres to the other.

2. *Physiol.:* According to Dr. Ferrier — (1) The anterior portions of the cerebral hemispheres are the chief centres of voluntary motion and of the active outward manifestations of intelligence. (2) Individual convolutions are separate and distinct centres; and in certain groups of convolutions are localised the centres for various movements—*e.g.*, eyelids, face, mouth, tongue, ear, neck, hand, foot, and tail of animals. (3) The action of the hemispheres is in general crossed; but certain movements of the mouth, tongue, and neck are bilaterally co-ordinated from each cerebral hemisphere

1. *Chem.*: A substance composed of fine crystalline needles, deposited whilst cooling, when wax has been boiled in alcohol. It is composed of carbon 48, hydrogen 50, and oxygen 2. It forms 70 to 80 per cent of beeswax. It is white, analogous to wax, fusible at 154° F. When treated with caustic alkali ley it is converted into margaric acid and *cerasine*.

2. *Min.*: A brownish-black mineral, a variety of Allanite (q.v.), found in East Greenland, generally massive, and rarely crystallized in four-sided prisms. It is composed of silica 35·4, protoxide of cerium 29·9, oxide of iron 25·4, alumina 4·1, lime 9·2. Sp. gr., 3·5–4·0

çē'-rĭn-īte, *s.* [From Lat. *cera* = wax, and Eng. suff. *-in*, *-ite* (*Min.*) (q.v.).] [CERIN.]

Min.: A white or yellowish-white mineral akin to Heulandite, but massive with a waxy lustre. Found in the trap of the Bay of Fundy.

çĕr-ĭn'-thē, *s.* [Lat. *cerinthe*, *cerinthe*; Gr. κηρίνθη (*kerinthē*) = the plant called *Cerinthe major* (see def.).]

Bot.: A small genus of borage-worts. The species are mostly European. Two, *Cerinthe major* and *minor*, have been long cultivated in gardens under the name of Honey-wort.

çĕr-ĭn'-thĭ-ăns, *s. pl.* [From *Cerinthus*, their founder, who flourished about A. D. 88.]

Eccles. Hist.: A heretical sect, followers of Cerinthus, a Jew by birth, who attempted to unite the doctrines of Christ with the opinions of the Jews and Gnostics. He believed that the Demiurge, or Creator of the World, who was not the Supreme Being, was also lawgiver of the Jewish nation. He having fallen off in character, God sent Christ, an æon, to enter into a certain Jewish man called Jesus, to subvert the power of the Demiurge, who, irritated, produced the crucifixion. The æon Christ shall again return to the man Jesus, and reign with his followers in Palestine for 1,000 years. Cerinthus is believed to have been born before the crucifixion of Our Lord, and St. John is said by Irenæus to have written his Gospel in opposition to his doctrines. The sect did not continue long.

çĕr'-ĭ-ŏp-ĕr-ă, *s.* [The first element is prob. Gr. κέρας (*keras*) = a horn; the second is Gr. πορος (*poros*) = a passage.]

Zool.: The type genus of Cerioporidæ (q.v.).

çĕr-ĭ-ō-pĕr'-ĭ-dæ, *s. pl.* [From Mod. Lat. *ceriopora* (q.v.), and Lat. fem. pl. adj. suff. *-idæ*.]

Zool.: A lapsed family of Polyzoa, containing species with a solid, simple, or branched cenœcium, with crowded contiguous cells.

çĕr'-ĭ-ōpe, *s.* [From Gr. κηρος (*kēros*) = beeswax, and ωψ (*ōps*) = the eye, the face.]

Bot.: A genus of plants of the Mangrove family, from tropical Asia and Australia. They are closely related to the genus Rhizophora. The seed germinates and protrudes from the fruit while still attached to the bough.

çĕr'-ĭ-or-nĭs, *s.* [Formed irregularly from Gr. κέρας (*keras*) = a horn, and ορνις (*ornis*) = a bird. The proper formation would be *cerutornis*.] [TRACHYAN.]

çĕr'-ĭph, *s.* [Etym. unknown.]

Type-founding: One of the fine lines of a letter, especially one of the fine cross strokes at the top and bottom of capitals (*Savage*).

çĕr'-ĭ-ŏse, *a.* & *s.* [Fr. *cerise* = a cherry, from Lat. *cerasus*.]

A. *As adj.*: A cherry colour; a light bright red.

B. *As adj.*: Of the colour of cerise.

çĕr'-īte (1), *s.* [Named by the discoverers after the planet Ceres, and suff. *-ite* (*Min.*).]

Min.: A mineral, a silicoferous oxide of cerium, of a brown or cherry-red colour, slightly translucent, and brittle. It is found in Sweden.

çĕr'-īte (2), *s.* [CERITHIUM.]

Paleont.: Any individual of the genus Cerithium or the family Cerithiidæ.

çĕr-ĭ-thĭ-ĭ-dæ, *s. pl.* [From Mod. Lat. *cerithium*, and Lat. fem. pl. adj. suff. *-idæ*.]

Zool.: A family of ctenobranchous molluscs, section Holostomata (Sea-snails). The shells are long and spiral, with many whorls and a horny operculum. They are widely distributed, but most abundant in tropical seas.

çē rĭth'-ĭ-ĭd, *a.* & *s.* [Mod. Lat. *cerithi(um)*; *-oid*.]

A. *As adj.*: Belonging to or resembling the genus Cerithium.

B. *As subst.*: Any individual of the Cerithiidæ.

çĕr-ĭth'-ĭ-ŭm, *s.* [From Gr. κεράτιον (*keration*) = a little horn, dimin. of κερας (*keras*) = a horn.]

Zool. & Paleont.: The typical genus of the family Cerithiidæ (q.v.). 136 recent species are known, and 460 fossil, the latter from the Trias onward till now.

çĕr'-ĭ-ŭm, *s.* [Named by the discoverers after Ceres.]

Chem.: A metal (Sym. Ce.; At. Wt. 92) found with two other metals, lanthanum and didymium, in cerite. Powdered cerite is made into a thick paste with concentrated sulphuric acid, and heated nearly to redness. The mass is then treated with water, saturated with H_2S, filtered, acidified with HCl, and precipitated by oxalic acid. This precipitate heated in the air to redness gives a brown powder of the mixed oxides. Nitric acid dissolves the oxides of lanthanum and didymium, and leaves the oxides of cerium. The oxides of lanthanum and didymium are separated by the repeated crystallization of their sulphates (see Watts's *Dict. of Chemistry*). Cerium is obtained by reducing its chloride with sodium as a grey powder which decomposes water slowly. It dissolves in dilute acids with evolution of hydrogen. Cerous oxide, CeO, obtained by igniting the carbonate or oxalate, is a greyish-blue powder, which, in the air, oxidises into cerous-ceric oxide, Ce_3O_4, a yellowish white powder. The salts of the former are colourless, those of the latter brown-red or yellow.

cerium carbonate, *s. Min.*: Lanthanite (q.v.).

cerium fluoride, *s. Min.*: Fluocerite (q.v.)

cerium phosphate, *s. Min.*: Churchite (q.v.)

cerium silicate, *s. Min.*: Cerite (q.v.).

çĕr'-ma-tĭ-ă, *s.* [Latinized from Gr. κερμα (*kerma*), gen. κερματος (*kermatos*) = a slice.]

Entom.: A synonym of Scutigera (q.v.).

çĕr'-mo-tĭ-ĭ-dæ, *s. pl.* [Mod. Lat. *cermatia(a)*; Lat. fem. pl. adj. suff. *-idæ*.]

Entom.: A synonym of Scutigeridæ (q.v.).

*** çĕrne,** *s.* [O. Fr. *cerne* = a circle; Lat. *circinus* = a pair of compasses.] A magic circle traced or paced; a ring, a circle.

"She . . . made a *cerne* with her wymple all aboute."—*Merlin* (*E. E. T. S.*), iii. 241.

çĕr'-nŭ-ŏŭs, *a.* [Lat. *cernuus* = stooping.]

Bot.: Drooping, hanging, pendulous.

çĕr'-ō-grăph, *s.* [CEROGRAPHY.] A writing on wax; an encaustic painting.

***çĕr-ō-grăph'-ĭc, *çĕr-ō-graph'-ĭ-cal,** *a.* [Eng. *cerograph(y)*; *-ic*, *-ical*.] Of or pertaining to cerography.

*** çĕr-ŏg'-rŭph-ĭst,** *s.* [Eng. *cerograph(y)*; *-ist*.] One who practises or is skilled in cerography.

*** çĕr-ŏg'-rŭph-y,** *s.* [Gr. κηρογραφία (*kērographia*) = painting with wax. κηρος (*keros*)

w wax ; γραφία (*graphía*) = writing, painting ; γράφω (*graphō*) = to write.]

1. The act or art of writing on wax.

2. The art of engraving on copper covered with a thin film of wax, from which stereotype plates are taken. (*Masson.*)

cēr'-ō-lite, *s.* [Gr. κηρός (*kēros*) = wax, and λίθος (*líthos*) = a stone.]

Min. : A greenish or yellowish-white mineral ; transparent or translucent. Comp. : Silica, 47·34 ; magnesia, 29·84 ; water, 21·04 ; hardness, 2—2·5. Sp. gr. 2·3—2·4. Lustre vitreous or resinous. It occurs at Frankenstein, in Silesia. It feels greasy to the touch, whence its name. (*Dana.*)

* **cēr-ō'-ma,** *s.* [Lat. *cerome* ; Gr. *κήρωμα* (*kērōma*) = ointment for athletes ; κηρόω (*kēróō*) = to anoint, to wax over ; κηρός (*kēros*) = wax.] That part of the ancient gymnasia and baths in which athletes used to anoint themselves.

* **cēr'-ō-măn-cy,** *s.* [Gr. κηρός (*kēros*) = wax, and μαντεία (*manteía*) = prophecy, divination.] A method of divination, formerly practised, by dropping melted wax into water and observing the figures formed.

† **cē-rōon',** *s.* [SERROON.] A bale or package made of skins. (*Webster.*)

cēr-ō-pō'-gī-ą, *s.* [From Gr. κηρός (*kēros*) = beeswax, and πηγή (*pēgē*) = a well, a fountain.]

Bot. : A genus of Asclepiads (Asclepiadaceæ), containing more than fifty species of perennial herbaceous plants, natives of India and Africa. They have a bulbous root, and short erect or twining stems. The calyx is five-parted. Several species are employed for food ; in some cases the whole plant is eaten as a salad, in others the fleshy leaves, stems, and tubers are used as pot vegetables. *Ceropegia edulis* is said to be eaten, whence its specific name.

* **cē-rōph'-ōr-ą-rỹ,** *s.* [Lat. *ceroferarius*, from Gr. κηρός (*kēros*) = wax ; φέρω (*phérō*) = to carry.]

1. An acolyte, an assistant of lower grade in a church, whose office it was to carry the candles in any religious procession. (*Fuller.*)

2. A stand for candles.

* **cēr-ō-plas'-tic,** *a.* & *s.* [In Fr. *céroplastique* ; Gr. κηροπλαστικός (*kēroplastikos*) = of or for modelling in wax : κηρός (*kēros*) = wax : πλάσσω (*plassō*) = to mould, to model.]

A. *As adj.* : Modelled in wax.

B. *As substantive* :

Sculp. (*of pl. form*) : The art or science of modelling figures in wax.

cēr-ōp'-tēr-is, *s.* [Gr. κηρός (*kēros*) = wax ; πτερίς (*pterís*) = a fern.]

Bot. : A name formerly applied to the species of Gymnogramma, or Gold and Silver Ferns.

cēr'-ō-sine, cēr'-ō-sin, *s.* [Lat. *cera* = wax ; Gr. κηρός (*kēros*) = wax, and Eng. suff. *-ine* (*Chem.*) (q.v.).

Chem. : A waxy substance found on sugar-canes. It is composed of carbon, hydrogen, and oxygen.

cēr ō-tāte, *s.* [CEROTIC ACID.]

* **cēr'-ōte,** *s.* [Low Lat. *cerotum* ; Lat. *cerutum*.] The same as CERATE (q.v.).

"In those which are critical, a *cerote* of oil of olives, with white wax, hath hitherto served my purpose."—*Wiseman.*

cēr'-ō-tēne, *s.* [Low Lat. *cerot*(*um*), and Eng. suff. *-ene* (*Chem.*).]

Chem. : $C_{27}H_{54}$ = Cerylene. An olefine hydrocarbon, melting at 57°, obtained by the dry distillation of Chinese wax.

cēr'-ō'-lin, *s.* [Low Lat. *cerot*(*um*), and Eng. suff. *-ic.*]

cerotic acid, *s.*

Chem. : $\begin{matrix} C_{25}H_{51} \\ | \\ COOH \end{matrix}$. A monobasic fatty acid which crystallises in small grains, melting at 78°, which distil without decomposition ; its salts are called cerotates. This acid is the principal constituent of cerin, the portion of beeswax which is soluble in boiling alcohol, from which cerotic acid may be prepared by precipitating with lead acetate, decomposing the precipitate with acetic acid, and recrystallising from boiling alcohol. Also from the dry distillation of Chinese wax, which consists of ceryl-cerotate.

cēr'-ox-ỹ-lon, *s.* [Gr. κηρός (*kēros*) = wax ; ξύλον (*xulon*) = wood, a tree.]

Bot. : A genus of Palmaceæ (Palms). *Ceroxylon andicola* yields wax, which forms a coating over its trunk.

cēr'-ri-ąl, *a.* [Lat. *cerrus* ; Fr. *cerre* = a variety of oak.] [CERIAL.] Of or pertaining to the Cerris or Bitter-oak.

cēr'-ris, cēr'-rūs, *s.* [Lat. *cerrus*.]

Bot. : The Bitter-oak, *Quercus cerris*.

* **cēr'-tes,** *v.t.* [Fr. *chercher*.] To search.

"Als at the kingis hienes depot & ordand certane comeris [*certeuris*] in cairtit tuein, quhilk is ane pert, quhilk sal haue power to *certes* the cairtis [*saikes*] & passingis furth of the Realme for haulding furth of money, quhat summeir persoune spirituale or temporale."—*Acts Ja. IV.*, A. 1503, Ed. 1814, p. 248.

* **cērt,** *a.* [Fr. *certes*, from Lat. *certus* = certain, assure.] Sure, certain.

¶ *For cert* : With a certainty, beyond a doubt. (*Fiſa.*)

cert-money, *s.*

Law : Head-money paid yearly by tenants of several manors to the lords thereof, for the certain keeping of the leet, and sometimes of the hundred.

cēr'-tain, * cer-taine, * cer-tayn, * cer-tein, * cer-teine, *a.*, *adv.*, & *s.* [O. Fr. *certein* ; Fr. *certain* ; Ital. *certano* ; Lat. *certus*, with suff. *-anus*. Connected with Lat. *cernō* = to perceive, and Gr. κρίνω (*krinō*) = to judge.]

A. *As adjective* :

I. *Objectively* :

1. Sure to happen, inevitable.

"Virtue that directs our ways,
Through *certain* dangers to uncertain praise."
Dryden.

* **2.** Trustworthy ; on which one can depend ; reliable.

"If he myght on them truste
That thei were *certayn*."
Langtoft, p. 69.

3. Fixed, settled, determined beforehand.

"You shall gather a *certain* rate every day."—*Exodus*, xvi. 4.

4. Indubitable, unquestionable, past doubt.

"These things are *certain* among men, which cannot be denied without obstinacy and folly."—*Tillotson.*

5. Unfailing.

"I have often wished that I knew as *certain* a remedy for any other distemper."—*Mead.*

II. *Subjectively* :

1. Sure, convinced, assured.

(1) With *of*.

"This the mind is equally *certain of*, whether these ideas be more or less general."—*Locke.*

(2) With an infinitive.

* **2.** Determined, resolved.

"However I with thee have fix'd my lot,
Certain to undergo like doom of death,
Consort with thee."
Milton : P. L., bk. ix.

III. *Indefinitely* :

1. *In agreement with a subst.* : Some one.

"And Jesus answering said, A *certain* man went down from Jerusalem to Jericho, . . ."—*Luke* x. 30.

"After wol I speke in ppyyte
Of *certeyn* thing that toucheth the and me."
Chaucer : C. T., 9,631.

2. *Absolutely* : An undetermined number or quantity.

"How and soever this fashion may nattly be accounted, *certain* of the same country men do pass far beyond it."—*Carew : Survey.*

¶ *To make certain* : To inform. [Lat. *certiorem facere*.] [ASCERTAIN.]

* **B.** *As adverb* :

1. *Absolutely* : Certainly, surely, undoubtedly.

"I wol telle it non other man, *certayn*."
Chaucer : C. T., 3,185.

2. *With a prep.* : *In certain*, in *certayne*, *for certain* = certainly, assuredly.

"Yet how should I *for certain* hold, . . ."
Tennyson : The Two Voices.

* **C.** *As substantive* :

1. Certainty, sure facts.

"Whereof the *certaine* to man knoweth."
Gower, i. 8.

2. A number or amount, either stated or not ; a quantity.

"He took with him a *certen* of his idle companions."—*Bale : Acts of Eng. Votaries.*

3. A fixed period or limit.

"Every time hath his *certain*."
Gower, II. 69.

"After he had continued a *certaine* of time."—*Holinshed's Chronicle : Hen. VI.*, p. 661.

¶ *Of a certain* : Assuredly, certainly.

"*Of a certain* these things are pretty toys."—*Peter Martyr*, ch. iii.

¶ Crabb thus distinguishes between *certain*, *sure*, and *secure* : "*Certain* respects matters of fact or belief ; *sure* and *secure* the quality or condition of things. A fact is *certain*, a person's step is *sure*, a house is *secure*. *Certain* is opposed to dubious, *sure* to wavering, and *secure* to dangerous. A person is *certain* who has no doubt remaining in his mind ; he is *sure* when his conviction is steady and unchangeable ; he is *secure* when the prospect of danger is removed. When applied to things, *certain* is opposed to what is varying and irregular ; *sure* to what is unerring ; *secure* is used mostly in its natural sense. It is a defect in the English language, that there are at present no *certain* rules for its orthography or pronunciation ; the learner, therefore, is at a loss for a *sure* guide. Amidst opposing statements it is difficult to *ascertain* the real state of the case. No one can *ensure* his life for a moment, or *secure* his property from the contingencies to which all sublunary things are exposed." (*Crabb : Eng. Synon.*)

* **cēr-tain',** * **cer-teyne,** *v.t.* [CERTAIN, *a.*] To certify, to inform.

cēr'-tain-lỹ, * **cer-tain-liche,** * **cer-tane-ly,** * **cer teyn lie,** * **cer-tein-liche,** *adv.* [Eng. *certain*, *-ly*.]

1. Assuredly, beyond doubt or question, of a certainty.

"*Certenliech* we be schent."
Seven Sages, 97.

"*Certainly* he that, by those legal means, cannot be secured, can be much less so by any private attempt."—*Sir. T. More : Dialogue of Christian Piety.*

2. Without fail.

"And he said, *Certainly* I will be with thee . . ."—*Exod.* iii. 12.

* **cēr'-tain-nĕss,** *s.* [Eng. *certain* ; *-ness*.] The quality of being certain ; certainty.

* **cer-taint,** *a.* [A pa. par. of *certain*, *v.*] Certain, sure. (*Scotch.*)

"It is most *certaint* his crowner Guns decerns Aboyne, . . ."—*Spalding*, i. 177.

cēr'-tain-tỹ, * **cer-tein te,** * **cer-teyn te,** * **cer tayn tye,** *s.* [Eng. *certain*, *-ty*.]

1. The quality or state of being certain, free from doubt.

"If it myght that weys be brouht to *certeynte*."—*Langtoft*, p. 278.

"In hopeless *certainty* of mind."
Byron : Bisoppo's Ghost, v. 11.

2. The quality or state of being fixed.

3. Assurance, confidence.

"Forthy may no *certeynte* be setth upon his wordis."
Wyclif, 1 Cor. xiv. 9.

". . . at a verye venture . . . to build *certainty*. . . . to assure the same."—*Spenser : Mother Hubberd's Tale*, 1,220.

4. A thing certain, sure, or indubitable ; an undeniable.

"Nay, 'tis most credible ; we here receive it
A *certainty* vouch'd from our cousin Austria."
Shakesp. : All's Well, ii. 1.

¶ *At a certainty* : In a state of certainty or assurance.

"Sometimes our way is clear sometimes . . . sometimes up hill, sometimes we feel . . . so are we now *at a certainty*."—*Bunyan : P. P.*, pt. ii.

Of a certainty : Assuredly, undoubtedly.

* **cēr'-tēs,** * **cer tys,** *adv.* [Fr. *certes*, from Lat. *certus* = sure.] Certainly, assuredly.

"An I *certes*, if it were to long to hear
I wolde lain told you fayn the matter."
Chaucer : The Knight's Tale, 1,777.

"*Certes*, who hides his grasp with that on . . . runs."
Thomson : Castle of Indolence, i. 25.

cēr-thī'-ą, *s.* [Lat. *certhia* ; Gr. κερθία (*therthía*) = a little bird, a tree-creeper. See def.]

Ornith. : The Creepers, or Old-World creeping birds, the typical one of the family Certhiidæ (q.v.). They are distinguished by their curved bill, called as *Certhia curvirostra* the crossbill, and *Certhia aurantia*, the Orange-coloured Creeper, also by the shape of the beak, as in *Certhia falcirostris*, the Sickle-billed Creeper. *C. familiaris*, the Common or Brown Creeper, is British. [CREEPER.]

cēr-thī'-i-dæ, * **cēr-thi-ą dæ,** *s. pl.* [From Lat. *certhia* (q.v.), and fem. pl. suff. *-idæ*.]

Ornith. : A family of Insessorial birds

with long, slender, and slightly arched bills, and short legs furnished with strong claws, which enable them to creep about upon the trunks and branches of trees. The family as now restricted contains four or five genera, with about a dozen species, and is often divided into two sub-families, Certhiinæ (Tree-creepers), and Tichodromiinæ (Wall-creepers).

çėr-tĭ-ĭ-næ, *s. pl.* [From Mod. Lat. *certhia* (q.v.), and Lat. fem. pl. adj. suff. *-inæ.*]

Ornith.: The typical sub-family of the family Certhiidæ (q.v.).

çėr-tie, çėr-tĭ, *a.* [Fr. *certes*, from Lat. *certus* = certain.] (Generally with the pronoun.) "My certie" = my faith; in good truth. (Scotch.)

† çėr-tĭ-fĭ-ą-ble, *a.* [Eng. *certify*; *-able.*] That may or can be certified; reliable.

çėr-tĭf-ĭ-cāte, *s.* [Fr. *certificat*; Ital. *certificato*, from Lat. *certificatus*, pa. par. of *certifico* = to make certain: *certus* = certain; *facio* = to make.]

I. *Ordinary Language:*

*1. Testimony, witness.

"A certificate of poverty is as good as a protection.—*L'Estrange.*

çē tă-çē-ə, *s.* [Lat. *cete*, *cetus*; neut. pl. suff. *-acea*; Gr. κητος (*kētos*) = a whale.]

1. *Zool.:* An order of mammiferous animals, which have no hind limbs. They have the form of fishes, with the exception of the horizontal tail, an instrument useful in enabling them to rise speedily to the surface of the water for respiration, which they are obliged to do frequently, as they breathe with lungs. Their blood is warm; they are viviparous, and suckle their young. They were formerly divided into the *Cetacea herbivora* and *C. carnivora*, the first comprising the manatees or lamantins, the hali ore or dugongs, and the extinct Rhytinas; the latter the whales, dolphins, narwhals, porpoises, and cachelots; or the order may be divided into the Sirenia and Cetacea, the latter with the following families: (1) Balænidæ (Whalebone Whales), (2) Delphinidæ (Dolphins and Porpoises), (3) Catodontidæ (Sperm Whales), (4) Rhyncheti (Xiphioid Whales), and (5) Zeuglodontidæ (all fossil).

2. *Palæont.:* The Cetacea appear to begin in the Eocene, from which they extend onwards till now.

The *Cetacea*, in fact, have so much the external form of fishes, that ordinary observers would not hesitate to consider them as such.—*Smithsonian Mod. Hist. Quadrupeds*, p. 180.

çē-tā-çē-əs, *a.* & *s.* [Lat. *cetaceus* = pertaining to a whale, *cete*, *cetus* = a whale.]

A. *As adj.:* Of or pertaining to the Cetacea, cetaceous

B. *As substantive:*

cetic acid, *s.*

Chem.: A name given to what was supposed to be a peculiar acid resulting from the saponification of cetin, but which has been found to be only a mixture of margaric acid and cetin.

çē-ti-çide, *s.* [Formed from Lat. *cet(e)* = whale; *cæd-o* = to kill, on the analogy of *parricide*, &c.] A whale-killer. (*Southey*: *Letters*, vi. 317.)

çē-tin, çē-tine, *s.* [Fr. *cétine*, from Lat. *cet(e)*, *cet(us)* = a whale, and Eng. suff. *-ine* (*Chem.*).]

Chem.: The pure, solid, crystaline mass of spermaceti. It occurs in beautiful silvery scales.

çē-ti-ō-sāu'-ri-an, *s.* [CETIOSAURUS.] Any individual of the genus Cetiosaurus (q.v.)

çē-ti-ō-sau'-rus, çē-ti-ō-sāu'-rus, *s.* [Lat. *cete* = a whale; *saurus* = a saurian.]

Palæont.: A name given by Owen to a genus of fossil Saurians found in the oolitic and cretaceous formations. It belongs to the order Dinosauria. Only one species is known. Its height when standing on all fours must have been ten feet, and its length fifty, sixty, or seventy feet. It was herbivorous.

çē-tōch-il-i-dæ, *s. pl.* [Mod. Lat. *cetochil(us)*, and fem. pl. adj. suff. *-idæ.*]

Zool.: A family of marine Entomostraca, belonging to the order Copepoda.

çē-tōch'-i-lus, *s.* [Gr. κήτος (*kētos*) = the whale, χεῖλος (*cheilos*) = food.]

Zool.: A genus of marine Entomostraca (Crustacea), the typical one of the family Cetochilidæ. It is distinguished by the two small styliform appendages to the head, the inferior antennæ being two-branched, the branches nearly equal, the unbranched jaw feet, the six-jointed thorax and four-jointed abdomen, and the last pair of legs being forms like the rest. There is only one British species, *Cetochilus septentrionalis*. Its colour is bright-red. It forms part of the food of the whale and various fishes. Length one to ten inches. (*Gerst. & Hensley.*)

çē-tō-lō'-ji-cal, *a.* [Eng. *cetology*; *-ical.*] Pertaining to cetology.

çē-tōl'-ō-gist, *s.* [Eng. *cetology*; *-ist.*] One skilled in cetology.

çē-tō-mi-ŋæ, *s.* [Etym. doubtful.]

Entom.: A genus of Beetles, the typical one of the family Cetoniadæ. *Cetonia aurata*, the Rose-beetle, is a beautiful insect, about three-quarters of an inch long, of a bright-green and sometimes coppery colour. It is found commonly in England in May and June on roses.

çē-tō-ni'-i-dæ, *s. pl.* [Mod. Lat. *cetonia*; and Lat. fem. pl. suff. *-idæ.*]

Entom.: The Floral Beetles, a family of Coleopterous insects of great variety and beauty. They live and move amongst trees, plants, and flowers, which are their natural food. The antennæ are small, ten-jointed; basal joints short, the three terminal joints comparatively long; thorax triangular; elytra straight, and obtusely rounded at the apex. It is one of the most interesting groups of Coleoptera, and all the species have brilliant colours.

çē-tŏp'-sis, *s.* [Gr. κήτος (*kētos*) = a whale, and ὄψις (*opsis*), genit. ὄψεως (*opseōs*) = appearance.]

Ichthy.: A genus of fishes with oblong, round, thick bodies, and short tails; eyes vertical and very minute.

çē-tŏr'-i-lite, *s.* [From Gr. κήτος (*kētos*) = any sea monster; ὄρος (*oros*), genit. ὄρεος (*oreos*) = a mountain, and Eng. suff. *-ite* (*Palæont.*) (q.v.).]

Palæont.: An ear-bone referred to some cetacean mammal. Specimens are found in the Red Crag, which is of Miocene age.

çe-trār'-i-a, *s.* [Mod. Lat., from Lat. *cetra*, *cetra* = a short Spanish leather shield, from the form and leathery quality of the plant.]

Bot.: A genus of Lichens, tribe Cetrariei. Thallus bright-brown, rigid, erect or ascending, divided into lacinæ, with shining cortical layer; apothecia dull or bright-brown; spermatia cylindrical. There are three British species. *Cetraria islandica*, the well-known Iceland-moss (CARAGHEEN), *C. Delisei*, and *C. aculeata*. (*Grevil. & Hookey.*)

çē-trār'-ic, *a.* [Mod. Lat. *cetrari(a)*, and Eng. suff. *-ic* (*Chem.*).] Of or belonging to Cetraria or Iceland-moss.

cetraric acid, *s.* An acid which forms one of the components of Cetrarine (q.v.).

çē-trār'-i-ei, *s. pl.* [Mod. Lat. *cetrari(a)*, and Lat. pl. suff. *-ei.*]

Bot.: A tribe of Lichens, of the family Lichenacei, having the thallus compressed, fruticulose, or membranously dilated; apothecia on the margins of the lacinæ or lobes. Genera, Cetraria and Platysma.

çēt rär'-ine, *s.* [Mod. Lat. *cetrar(ia)*, and Eng. suff. *-ine* (*Chem.*).]

Chem.: The bitter principle of the *Cetraria islandica*, or Iceland moss, which is a mixture of cetraric acid, a fatty acid, and an indistinctly crystalline substance, neither acid nor basic, which has not been properly examined.

çēt rīl, *s.* [Lat. *cetus* = a whale; Gr. ὕλη (*hulē*) = . . . matter as a principle of being.]

Chem.: A substance obtained in the state of an oxide in spermaceti; its hydrate corresponds to alcohol, and is termed *ethal*, from the first letters in *ether* and *alcohol*. Cetule consists of thirty-two atoms of carbon, and thirty-three of hydrogen.

çē tūs, *s.* [Lat. *cetus*, from Gr. κήτος (*kētos*) = a whale.]

1. *Zool.*: The whale (q.v.).

2. *Astron.*: The Whale, a large constellation in the southern hemisphere. It occupies the greatest space of any in the heavens, and contains ninety seven stars, of which two are of the second magnitude, eight of the third, nine of the fourth, &c.

çēt'-yl, *s.* [From Gr. κήτος (*kētos* = a sea monster, and ὕλη (*hulē*) = . . . matter as a principle of being.]

Chem.: Organic radical, $C_{16}H_{33}$.

çē'-tyl ic, *a.* [From Eng., &c., *cetyl* (q.v.), and suff. *-ic.*] Derived from or consisting to a greater or less extent of cetyl.

cetylic alcohol, *s.*

Chem.: $C_{16}H_{33}(OH)$ = Sexdecyl Alcohol = Ethal. Obtained from spermaceti, a crystalline fatty substance found in cavities in the head of *Physeter macrocephalus*. This substance consists of cetyl palmitate $C_{16}H_{33}$ $C_{16}H_{31}O_2$, which is converted into potassium palmitate and cetyl alcohol by heating it with solid potash. The cetyl alcohol is thus set out and crystallised from ether. Cetylic alcohol is a white crystalline substance which melts at 50°. Heated with sodium it forms sodium cetylate, $C_{16}H_{33}NaO$. Heated with potash it is converted into potassium palmitate.

çēt-ŷ wall, cet wall, *s.* [CETEWALE.]

Valeriana pyrenaica, or some other species of Valerian. (*Britt. & Holland.*)

çē-thē rāŋ'-chūs, *s.* [Gr. κήθω (*kēthō*) = to hide; ῥαγχος (*rhagchos*) = the throat.]

Entom.: A genus of coleopterous insects of the family Curculionidæ. Antennæ elbowed, jointed; basal joint as long as the rest taken together, club ovate; beak as long as the body, bent, and slightly so, at other times short and straight; thorax attenuated, rounded at extremities, and do not entirely cover the abdomen, extremities of latter with spines. The species are very numerous, many are exceedingly small. *Cethærhynchus dentipes* is abundant on the stinging nettle. When touched, these little beetles roll themselves into a ball, contract the legs, and allow themselves to fall to the ground, when they can with difficulty be distinguished from the mould. Hence they are best captured by sweeping.

çēv'-a-dāte, *s.* [In Fr. *cevadate*, from *cevadilla* (q.v.).]

Chem.: A term for a combination of cevadic acid and a salifiable base.

çē-vād'-ic, *a.* [From *cevadill(a)* (q.v.), and suff. *-ic* (*Chem.*).] Of or belonging to *Veratrum sabadilla*, or caustic barley.

cevadic acid, *s.* An acid obtained by the action of potash on the fatty matter of the Cevadilla, or Sabadilla plant.

çē-vad'-il-la, sē-bad'-il-la, sa-bad'-il-la, *s.* [From the Spanish Mexican *cebadilla* = a little oat, dimin. of *cebada* = oat.]

Bot.: A species of Veratrum, the seeds of which have become an article of commerce, in consequence from their containing a considerable quantity of Veratrin (Vanarino), a native of Mexico. The flowers have a smell resembling that of Bergamot. The plant is now called *Asagræa officinalis*.

çēv'-a-dine, *s.* [From Sp. Mexican *cebadilla* = an oat, and Eng. suff. *-ine.*]

Chem.: An alkaloid with the formula $C_{32}H_{49}NO_9$, found in cevadilla.

***çē vil,** *s.* [Etym. unknown.]

Chem.: A Paracelsian name for a kind of hard substance in the earth, such as lapis calcalus in man, indurated humours, tartar by the spirit of wine, a stone, liquor of the earth, it has stood in high private remedies against the formation of stone or gravel in man.

Çēy lôn, *s. & a.* [A corruption of Singhalese *Sinhala*, in the word *Sinhalé* = Island of lions, from Sanscr. *Simha* = lion, the same word which occurs in Singapore, the city of lions, and as a title of Sinhalese Rajpoots, as *Gadah Singh* = Godah the Lion, or the Lion-like Godah.]

Ceylon moss,

Bot.: *Plocaria* . . . also Jaffna moss.

Çēy lôn ēse, *a. & s.* [From Eng., &c., *Ceylon*, and suff. *-ese.*]

A. *As adj.*: Pertaining to Ceylon.

B. *As subst.*: A native of Ceylon. (Cicero, Brut.)

çēy lôn ite, çēy lan ite, *s.* [From *Ceylon*, where it occurs.]

Min.: A variety of spinel (q.v.), from Ceylon; also called *Iron-Magnesian Spinel*. Colour dark-green, brown to black, lustre splendent, nearly so. Sp. gr., 3·7.

çē yx, *s.* [Gr. κηυξ (*keux*), κηύξ (*kēx*) = a bird, not clearly identified.]

Ornith.: A genus of the Kingfishers of the family Alcedinidæ, with . . . in front, and one behind. . . . are exotic species from the . . . and Austro-Malayan sub-region.

c ĥ at, s. A note in the scale of music.

chad-dy, s. [CHAD (2), s.] Gravelly, as, "chaddy ground," that which chiefly consists of gravel. (*Scotch.*)

*** chad'-lock,** s. [CARLOCK.]

Bot.: A local name for *Sempervivum arvense*.

Water-chadlock: *Nasturtium amphibium*. (*Gerarde.*)

cha-né ploû ra, s. [Gr. χαίνω (*chainō*) = to open, to gape, and πλευρά (*pleura*) = the sides.]

Bot.: A genus of West Indian shrubs, of the order Melastomaceæ.

cha-nos tó ma, s. [Gr. χαίνω (*chainō*) = to open, to gape, and στόμα (*stoma*) = the mouth.]

Bot.: A considerable genus of South African shrubs, belonging to the order Scrophulariaceæ. Leaves dentate, opposite; flowers axillary or racemose, pedicellate; calyx five-parted; corolla deciduous, funnel-shaped; style simple, stigma subclavate.

chasr a dò di-a, s. [From Gr. χαίρω (*chairō*) = to rejoice, second element doubtful.]

Bot.: A genus of endogenous plants, order Amaryllidaceæ. A cold infusion of the leaves of *Chasradata chilensis*, the Tecked of Chili, is used by the natives as a purgative and diuretic.

chas ré-phyl lum, s. [Gr. χαίρω (*chairō*) = to rejoice, and φύλλον (*phyllon*) = a leaf, from the agreeable smell of the leaves.]

Bot.: Cicely, or Chervil, a genus of umbelliferous plants of the tribe Scandineæ (CHERVIL). *Chærophyllum temulum*, or *C. sylvestre*, a plant one to three feet high, with purple-spotted stems, roll-ed bracteoles and deltoid twice-pinnate hairy leaves, is common in Britain, from Moray and Ross, southward; ascending to 1,200 feet in Yorkshire, rare in Ireland. Other alleged British species are doubtful.

chas tę, s. [Gr. χαίτη (*chaitē*) = long, loose, flowing hair . . . a bristle.]

* 1. *Anat.*: An old term for the hair at the back of the head, and about the temples.

2. *Bot.*: A bristle. The slender stalk of the spore-case of mosses; also called *Seta* (q.v.).

chas tó tes, s. Latinised from Gr. χαίτη (*chaitē*) = long, loose, flowing hair, and λίθος (*lithos*) = stone.]

Paleont.: A genus of Tabulate corals, the typical one of the family Chætetidæ. It is found from the Silurian to the Permian.

chæ-tét-i-dæ, *s. pl.* [From Mod. Lat. *chætes* (q.v.), and fem. pl. adj. suff. *-idæ*.]

Paleont.: A family of Tabulate corals, containing species with a compound corallum of closely approximated imperforate coralites without septa. They occur from the Lower Silurian to the Permian period.

chæ tif-er-a, chæ tif-er-i, *s. pl.* [Mod. Lat. *chæta* = a bristle, and *fero* = to bear.]

Zool.: A group of Sipuncula worms (GEPHYREA) having the mouth at the base of the proboscis, two strong ventral bristles, and the anus terminal.

chæ tif ér ous, a. [CHÆTIFERA.]

1. Furnished with, or bearing, bristles.

2. Belonging to, or connected with, the Chætifera (q.v.).

chæ tóg ér-ba, s. [Gr. χαίτη (*chaitē*) = hair, a bristle, and κέρας (*keras*) = a horn.]

Zool. & Paleont.: A genus of marine and fossil Diatomaceæ, having the frustules concatenate, valves equal, sub-cylindrical, with two processes, one on each side, which are subsequently converted into very long, thin, and interwoven siliceous filaments. (*Grev. & Hoskyns.*)

chæ tó-dèr ma, s. [Mod. Lat. *chæta* = a bristle, and Gr. δέρμα (*derma*) = the skin.]

Zoology:

1. A primitive or degraded genus of Gastropoda Inopleura, with a single species, *C. nitidulum*, from about 80 fathoms in the North Sea. It is a small, worm-shaped animal, and the shell is replaced by numerous minute calcareous spits in the surface of the skin. They were formerly thought to be Sipuncula worms.

2. (Used as a pl.) The same as Chætodermata. (*Lankester.*)

chæ tó dèr ma ta, *s. pl.* [CHÆTODERMA.]

Zool.: An order of Gastropoda Inopleura, consisting of the single genus Chætoderma.

chæ tó dèr ma tous, a. [Mod. Lat. *chætoderm(a)*, Eng. suff. *-ous*.]

1. Bearing spines in the integument.

2. Belonging to or characteristic of the Chætodermata.

chæ tó dis cús, s. [Gr. χαίτη (*chaitē*) = a hair, a bristle, and δίσκος (*diskos*) = a disk.]

Zool.: A genus of Diatomaceæ, having the frustules disk shaped; valves circular or oval, with radiating dots and a submarginal circle of tubular processes unconnected by means of special radiating lines of dots with the centre.

chæ tó dòn, s. [Gr. χαίτη (*chaitē*) = a bristle; ὀδούς (*odous*), genit. ὀδόντος (*odontos*) = a tooth.]

Ichthy.: A genus of fishes, the typical one of the old family Chætodontidæ. The body is oval; the mouth more or less pointed; no spine on the pre-operculum, or prickles before the dorsal fin, which is single. There are about 70 species from the tropical parts of the Atlantic and Indo-Pacific, nearly all characterised by brilliant coloration.

chæ tó dont, a. & s. [CHÆTODONTIDÆ.]

A. *As adj.*: Belonging to or characteristic of the family Chætodontidæ.

B. *As subst.*: Any fish of the family Chætodontidæ.

chæ tó don ti dæ, *s. pl.* [Mod. Lat. *chætodont(a)*, gen. *chætodontis(is)*; Lat. fem. pl. adj. suff. *-idæ*.]

Ichthyology:

* 1. A family of Acanthopterygian fishes from tropical seas. The body is compressed and elevated, and covered with finely pectinated or smooth scales. The mouth, which is in front of the snout, is generally small. Dorsal consisting of nearly equal spinous and soft parts, and the dorsal and anal fins are so thickly covered with scales that it is almost impossible to tell where the fins begin and the body ends. Teeth villiform or setiform in bands, no canines or incisors. In this sense it is equal to Squamipinnes.

2. Later ichthyologists who use the term restrict it to Chætodon and its near allies.

chæ-tō-găs'-trą, *s.* [Gr. χαίτη (*chaitē*) = a bristle, a hair, and γαστήρ (*gastēr*) = a belly.]

Bot.: A genus of plants, natives of tropical America, belonging to the order Melastomaceæ. It derives its name from the tube of the calyx being bristly.

chæ-tō-glē'-nę, *s.* [Gr. χαίτη (*chaitē*) = a hair, a bristle, and γλήνη (*glēnē*) = the pupil of an eye.]

Zool.: A genus of Infusoria, of the family Peridina. Carapace hispid, or studded with rigid spines; no traverse furrow; an eye-spot present; organ of motion a flagelliform filament. (*Griff. & Henfrey.*)

chæ-tŏg'-ną-thą, *s. pl.* [From Gr. χαίτη (*chaitē*) = long, loose, flowing hair, and γνάθος (*gnathos*) = the jaw, the mouth.]

Zool.: A class of small marine worms with but two genera, Sagitta and Spadella, both of which have British representatives.

chæ-tŏg'-ną-thŭs, *a.* [Mod. Lat. *chætognath(a)*; Eng. suff. *-ous.*] Belonging to or characteristic of the Chætognatha (q.v.).

chæ-tō'-mĭ-ŭm, *s.* [Gr. χαίτη (*chaitē*) = a hair, a bristle; etymol. of *mium* doubtful.]

Bot.: A genus of Perisporiacei (Ascomycetous Fungi), having a filamentous mycelium bearing superficial roundish or ovate conceptacles clothed with hairs, finally opening above and containing clavate asci with paraphyses; sporidia simple, ovate. The asci in this genus are very delicate, and are readily absorbed, so that frequently there is not a trace of them, and the sporidia seem naked. (*Grif. & Henfrey.*)

chæ-tō-nō'-tŭs, *s.* [Gr. χαίτη (*chaitē*) = a hair, and νῶτος (*nōtos*) = the back.]

Zool.: A genus of microscopic animals found in fresh water, amongst aquatic plants. They appear to be allied to the Rotifera, but have neither mastax nor trochal disk. With one or two allied genera, they are now held to constitute a distinct phylum, Gastrotricha.

chæ-tŏph'-ŏr-ą, *s.* [Gr. χαίτη (*chaitē*) = a hair; φορός (*phoros* = bearing, producing, φέρω (*pherō*) = to bear, to produce.]

1. *Bot.:* A genus of Chætophoridæ (Confervoid Algæ), characterised like Draparnaldia by setigerous branched filaments, but differing from the latter by the filaments being imbedded in a gelatinous matrix. The Chætophoræ are found in fresh water, forming little green protuberances on stones, sticks, &c., usually bright green. The zoospores are formed singly in joints, and bear four cilia. (*Griff. & Henfrey.*) There are about six British species known, all from fresh water.

2. *Zool.* (*As a pl.*): A sub-class or order of Annelida, comprising those in which progression takes place by means of chitinous setæ, or by suctorial disks. Of the former section the Earthworms, Tubeworms, and Sandworms are examples; of the latter, the Leeches. (*Nicholson.*)

chæ-tō-phŏr'-Ĭ-dæ, *s. pl.* [Mod. Lat. *chætophor(a)*, and Lat. fem. pl. suff. *-idæ.*]

Bot.: A family of Confervoid Algæ growing in sea or fresh water, invested with gelatine; either filiform or (a number of filaments being connected together) expanded into gelatinous, branched, definitely or shapeless fronds or masses. Filaments jointed, furnished with bristle-like processes. Fructification consisting of spores and four-ciliated zoospores, formed out of the contents of the articulations. (*Griff. & Henfrey.*)

chæ'-tō pŏ, *a. & s.* [Chætopoda.]

A. *As adj.:* Belonging to or characteristic of the Chætopoda.

B. *As subst.:* Any individual of the Chætopoda (q.v.).

chæ-tŏp'-ō-dą, *s. pl.* [From Gr. χαίτη (*chaitē*) = long flowing hair, and πούς (*pous*), genit. ποδός (*podos*) = a foot.]

Zoology:

1. In Prof. Ray Lankester's classification, one of the three branches of the phylum Appendiculata, the other two being Rotifera and Arthropoda.

2. An order of Annelidæ, containing those marine worms with dorsal branchiæ and non-tentacular. [Oligochæta, Polychæta.]

chæ-tŏp'-ō-dŭs, *a.* [Mod. Lat. *chætopod(a)*; Eng. suff. *-ous.*] Belonging to or characteristic of the Chætopoda (q.v.).

chæ'-tōpe, *s.* [Gr. χαίτη (*chaitē*) = a bristle, a hair, and ὄψ (*ops*) = a face.]

Ornith.: A genus of birds, belonging to the Myotherinæ or Ant-thrushes, so named from the bristly feathers in front of the face.

chæ'-tŏp-sĭs, *s.* [Gr. χαίτη (*chaitē*) = a hair; ὄψ (*ops*), genit. ὄφις (*opsis*) = a face.]

Bot.: A genus of Mucedines (Hyphomycetous Fungi) characterised by erect jointed threads, whorled below, above simple and flagelliform, bearing cylindrical spores from the tips of the branchlets. One species only is known, *Chætopsis Wanchii.* (*Grif. & Henfrey.*)

chæ'-tō-pŭs, *s.* [Gr. χαίτη (*chaitē*)=a bristle, a hair, and ποῦς (*pous*) = a foot.]

Ornith.: The Francolins, a genus of birds belonging to the Perdicidæ or Partridges, so named from the tarsus of the male being armed with spurs.

chæ-tō-spōr'-ą, *s.* [Gr. χαίτη (*chaitē*) = a bristle, a hair, and σπορά (*spora*) = a sporule.]

Bot.: A genus of Algæ, of the order Confervoideæ, so named in reference to the fine capillary divisions of the filaments.

chæ-tŏs'-tŏm-ą, *s.* [Gr. χαίτη (*chaitē*) = a bristle, a hair, and στόμα (*stoma*) = a mouth.]

Bot.: A genus of small, dry, heath-like Brazilian shrubs, belonging to the order Melastomaceæ. Stems leafless at base; flowers solitary, rather small, purple with yellow anthers.

chæ-tūr'-ą, *s.* [Gr. χαίτη (*chaitē*) = a bristle; and οὐρα (*oura*) = a tail.]

Ornith.: A genus of birds of the family Cypselidæ (Swifts), so named from the shafts of the tail-feathers being prolonged into acute points.

chæ-tu-rī'-næ, *s. pl.* [Mod. Lat. *chætur(a)*; Lat. fem. pl. adj. suff. *-inæ.*]

Ornith.: Spine-tailed Swifts, a sub-family of Cypselidæ (q.v.), with four or five genera.

chæ'-tu-rine, *a.* [Chæturinæ.] Belonging to or characteristic of the sub-family Chæturinæ; spine-tailed.

chæ tür'-ŭs, *s.* [Gr. χαίτη (*chaitē*) = a bristle, a hair, and οὐρα (*oura*) = a tail.]

Bot.: A genus of grasses belonging to the tribe Agrostideæ. The only species described, *Chæturus fasciculatus*, is a small annual grass, a native of Spain. It derives its name from the silky appearance of the panicles.

2. *Sporting:* The trail of an otter.

3. *Naut.* (*chains*, properly *chain-wales*, or *channels*): Broad and thick planks projecting horizontally from the ships outside, to which they are fayed and bolted, abreast of and somewhat behind the masts. They are formed to project the chain-plate, and give the lower rigging greater outrig or spread, free from the topsides of the ship, thus affording greater security and support to the masts, as well as to prevent the shrouds from damaging the gunwale, or being hurt by rubbing against it. Of course they are respectively designated fore, main, and mizzen. They are now discontinued in many ships, the eyes being secured to the timber-heads, and frequently within the gunwale to the stringers or lower shelf-pieces above the water-way. *In the chains* applies to the leadsman, who stands on the channels between two shrouds to heave the hand-lead.

"[He] tossed it into the main *chains*, to the man who had thrown the stern last."—*Marryat: Midship Boy.*

4. *Weaving:* The warp threads of a web. It is called also *fitting* or *hoist*, and in the case of silk it is denominated organzine.

☞ Crabb thus distinguishes between a *chain*, a *fetter*, a *band*, and a *shackle*:—"All these terms designate the instrument by which animals or men are confined. *Chain* is general and indefinite; all the rest are *chains:* but there are many *chains* which do not come under the other names, a *chain* is indefinite as to its make; it is made generally of iron rings, but of different sizes and shapes. *fetters* are larger, they consist of many stout *chains: bands* are in general any thing which confines the body or the limbs; they may be either *chains* or even cords: *shackle* is that species of *chain* which goes on the legs to confine them; malefactors of the worst order have *fetters* on different parts of their bodies, and *shackles* on their legs. These terms may all be used figuratively. The substantive *chain* is applied to whatever hangs together like a *chain*, as a *chain* of events; but the verb *to chain* signifies to confine as with a *chain:* thus the mind is *chained* to rules, according to the opinions of the free-thinkers, when men adhere strictly to rule and order; and to represent the slavery of conforming to the establishment, they tell us we are *fettered* by systems. *Band* in the figurative sense is applied, particularly in poetry, to every thing which is supposed to serve the purpose of a *band;* thus love is said to have its silken *bands*. *Shackle*, whether as a substantive or a verb, retains the idea of controlling the movements of the person, not in his body only, but also in his mind and in his moral conduct: thus a man who commences life with a borrowed capital is *shackled* in his commercial concerns by the interest he has to pay, and the obligations he has to discharge." (*Crabb: Eng. Synon.*)

☞ *Chain of locks:*

Hydraulic Engineering: A succession of lock-chambers, the lower pair of gates of each of which (except the lowest) forms the upper pair of gates for the chamber below. [CANAL-LOCK.]

B. *As adj.:* (See the compounds).

chain-belt, *s.*

1. A chain forming a band or belt for the conveyance of power.

2. A chain covered with plating or overlaid with strips to form a round belt.

chain-boat, *s.* A boat used in harbours for recovering chain-cables and anchors.

chain-bolt, *s.*

1. *Naut.:* A large bolt to secure the chains of the dead-eyes through the toe-link, for the purpose of securing the masts by the shrouds. Also the bolts which fasten channel-plates to the ship's side.

2. *Carp.:* A bolt having an attached chain by which it may be drawn back, falling by its own gravity or pushed into place by a spring.

chain-bond, *s.* The tying together of parts of a wall by a chain or iron bar built in.

chain-bridge, *s.*

1. A form of ferry-bridge in which the passage is made by chains laid across the river and anchored on each side, and moving over chain-wheels on board, driven by engines. Such a ferry-bridge used to cross the Itchen, in Hampshire. [FERRY-BRIDGE.]

2. An early form of the suspension-bridge in which catenary chains supported the floor. The first was erected over the Tees, in 1741. Rods with eyes and connecting-links were used by Telford on the Menai Suspension Bridge, 1829; steel wires laid up into cables are now used. [SUSPENSION-BRIDGE.]

* **chain-bullets,** *s. pl.* [CHAIN-SHOT.]

"My friend and I
Like two *chain-bullets*, side by side, will fly
Through the jaws of death."
Heywood: Challenge for Beauty, 1636.

chain-cable, *s.*

Naut.: A cable made of iron links. They are not new; Cæsar found them on the shores of the British Channel. Smyth, in his *Sailor's Word-Book*, says that in 1818 he saw upwards of eighty sail of vessels with them at Desenzano, on the Lago di Garda. They have all but superseded hemp cables in recent times; they are divided into parts fifteen fathoms in length, which are connected by shackles, any one of which may be slipped in emergency; at each 7½ fathoms a swivel used to be inserted, but in many cases they are now dispensed with. Chain-cables were made in England by machinery in 1792, and introduced into the British merchant-service by Captain Brown of the "Penelope," West Indiaman, 400 tons burden, 1811. The cable had twisted links. Chain-cables are generally made in lengths of from 12½ to 25 fathoms; each length is usually provided with a swivel. The lengths are joined together by shackles (q.v.). A cable's-length is 100 fathoms of 6·08 feet each, and is one-tenth of a nautical mile. Chain-cables are stowed in chain-lockers, generally near the mainmast, or just before the engine and boiler compartment. The locker-space required may be found by the following rule: Multiply the square of the diameter of the cable in inches by 35. The product is the space required in cubic feet, nearly. Four kinds of apparatus are used for regulating or checking the motion of the cable as it runs down the hawse-holes, and for holding it fast when the cable after the anchor has taken hold. These are Controllers, Bitts, Stoppers, Compressors (q.v.).

Chain-cable compressor: A curved arm of iron which revolves on a bolt through the deck at one end. At the other is a larger end which a tackle is hooked; it is used to force the cable against the pipe through which it is passing and check it from running out too quickly.

Chain-cable controller: A contrivance for the prevention of one part of the chain riding on another while heaving in.

Chain-cable shackles: Used for coupling the parts of a chain-cable at various points so that they may be disconnected when circumstance demands it.

chain coral, *s.* An elegant European species of fossil, *Cuttalipora catenulata.*

chain-coupling, *s.*

Railroad Engineering:

1. A supplementary coupling between cars, as a safety-device in case of accidental uncoupling of the prime connector.

2. A shackle for a chain whereby lengths are united as in a chain-cable, or a shackle or clevis to unite a chain with an object.

chain-fastening, *s.* A sailor's bend, or cable mooring.

chain-gang, *s.* A gang or number of persons chained together, in order to prevent the escape of any one.

chain-gear, *s.* A form of cog-gearing in which an open linked chain catches upon cogs or sprockets of the wheel, and is the means of motion thereof, or conversely. [CHAIN-WHEEL.]

chain-guard, *s.*

Hor.: A mechanism in watches provided with a fusee, to prevent the watch being over-wound.

chain-hook, *s.*

Nautical:

1. An iron rod with a handling eye at one end and a hook at the other for holding the chain-cable.

2. A cable-stopper which clamps the link of a chain between two other links.

chain-inclinometer, *s.* A form of theodolite in which the inclination of the surveyor's chain is indicated on a scale by the pointer on the end of the level.

chain-knot, *s.*

1. A succession of loops on a cord, each loop in succession locking the one above it, and the last one locked by passing through it the end of the cord.

2. A kind of knot used in splicing. (Knight.)

3. The loop-stitch of some sewing machines. [STITCH, s.]

chain-lifter, *s.*

Naut.: A cast-iron grooved rim, with projections, situated at the foot of the capstan barrel, and forming the drum around which the chain cable is wound in weighing anchor.

chain-locker, *s.* The same as *chain-well* (q.v.).

Chain-locker pipe:

Naut.: The iron-bound opening or section of pipe passing through the deck, and through which the chain-cable passes to or from the locker in which it is stowed.

CHAIN-MAIL.

chain-mail,
s. A kind of armour made of interlaced rings or links.

chain-moulding, *s.*

Archit.: A kind of moulding used in the Roman style, made in imitation of a chain.

CHAIN-MOULDING.

chain-pier, *s.* A pier which runs out into the sea and is supported by chains like a suspension-bridge.

chain pin, *s.*

Surveying: The wire pin, having a loop at one end and pointed at the other, employed by surveyors for marking the termination of each chain in measuring distances.

chain-pipe, *s.* An aperture through which a chain-cable passes from the chain-wel to the deck above.

chain-plates, *s. pl.* Plates of iron with their lower ends bolted to the ship's sides under the channels, and to these plates the dead-eyes are fastened; other plates cap over and secure them below. Formerly, and still in great ships, the dead-eyes were linked to chain-pieces, and from their being occasionally made in one, they have obtained this appellation.

chain-pore, *s. & a.* (See the compound.)

Chain-pore coral: The book-name for the zoological genus Catenipora.

chain-pulley, *s.* A pulley having pockets or depressions in its periphery, in which he the links, or alternate links, of a chain which passes over it and gives motion thereto, or conversely.

chain pump, *s.* One form consists of an endless chain passing around a wheel above and descending into the water below. In its upward course it passes through a vertical tube whose lower end is submerged, and at whose upper end the water is discharged. Along the chain are round disks or buttons, which fit in the bore of the tube, and form pistons which elevate the water as the chain ascends in the tube. The cellular pumps are of this kind, and when packed pistons are used, they are termed *paternoster pumps*, from the resemblance of the chain and buttons to the rosary.

chain rule, *s.*

Arith.: A theorem for solving numerical problems by composition of ratios or compound proportion.

chain-saw, *s.*

1. *Surg.:* A saw whose teeth are jointed links, used in making sections in deep-seated bones by passing the saw around the bone and then back again, so as to give command of both ends to the operator, who draws the ends back and forth.

2. One form of hand saw or scroll-saw is also made of separate teeth pivoted or hooked together.

Chain-saw carrier:

Surgery: A hinged and hooked instrument whereby the end of the chain saw, or a ligature, by which the saw may be drawn, is passed beneath a deep-seated bone, and so far on the other side as to be grasped by a forceps.

chain shot, *s.* Two balls connected either by a bar or chain, formerly used for cutting and destroying the spars and rigging of an enemy's ship. Invented by Admiral De Witt in 1666. (*Knight.*)

CHAIN-SHOT.

In old battle oftentimes, a buttock, the brawn of the thigh, or the calf of the leg, is torn off by the *chain-shot*, and splinters.—*Wiseman. Surgery.*

chain-slings, *s. pl.* Chains attached to the sling hoop and mast head, by which a lower yard is hung. Used for boat or any other slings demanded.

chain-stitch, *s.*

1. An ornamental stitch resembling a chain.

2. (*In sewing-machines*): A loop-stitch, in contradistinction to a lock-stitch. It consists in looping the upper thread into itself, on the under side of the goods; or using a second thread to engage the loop of the upper thread.

chain-stopper, *s.* A stopper for a chain-cable (q.v.).

chain-timber, *s.*

1. A timber of large dimensions placed in the middle of the height of a story, for imparting strength.

2. A bond timber in a wall.

chain top, *s.* A chain to sling the lower yards in time of battle, to prevent them from falling down when the ropes by which they are hung are shot away.

chain-towing, *s.* A method of towing ferry or canal boats, in America, by means of a chain which is laid in the bottom of the watercourse, but with one end on the deck of the boat, where it is wound round a windlass as the boat advances. It was first introduced by Marshal Saxe in 1732, in France, for transporting war material. The steam ferry between Portsmouth and Gosport is worked by towing chains.

chain-wales, *s.*

Shipbuilding: One of the wales or thick planks bolted to the ship's sides and serving for the attachment of the chains to which the shrouds are connected. [CHANNEL.]

chain well, *s.* A receptacle below deck for containing the chain-cable, which is passed thither through the deck-pipe. It is also called a CHAIN-LOCKER.

chain wheel, *s.* A wheel fitted with sprockets adapted to receive the links of the chain successively. The power may be communicated by the wheel to the chain, or conversely.

chain-work, *s.*

1. *Ordinary Language:*

(1) Work with open spaces like the links of a chain.

"Nets of chequerwork, and wreaths of *chainwork*, for the chapiters which were upon the tops of the pillars."—*1 Kings*, vii. 17.

(2) Applied to articles of manufacture in which cordage or thread is linked together in manner of a chain.

2. *Technically:*

(1) *Hosiery:* (See extract).

"This texture [stocking-knitting] is totally different from the rectangular decussation which constitutes cloth. . . . or in this . . . the whole piece is composed of a single thread united or looped together in a peculiar manner, which is called stocking stitch, and sometimes *chainwork*."—*Ure: Dictionary of Arts, Manufactures, and Mines.*

(2) *Naut.:* Chains laid over the sides of vessels, in order to deaden the effects of shot or shell.

ȼhāin, * **ȼhaeynyn,** *v.t.* [CHAIN, *s.*]

I. *Literally:*

1. To fasten, bind, or connect with a chain.

"Th se hands are *ch ined*, but let me die
At least with an unshackled eye."
Byron: Parisina, 17.

2. To guard with a chain.

"The adm ral seeing the mouth of the haven *chained* and the cast . full of ordnance, and strongly manned, durst not attempt to enter."—*Knolles: Hist. of the Turks.*

II. *Figuratively:*

1. To unite closely and strongly, to attach.

"O Warwick, I do bend my knee with thine,
And in this vow do *chain* my soul to thine."
Shakesp.: 3 Hen. VI., ii. 3.

2. To put or keep in subjection, to enslave.

"This world, tis true,
Was made for Cæsar but for Titus too;
And which more blest? who *chain'd* his country, say,
Or he whose virtue sigh'd to lose a day?"
Pope: Essay on Man, iv. 125-8.

ȼhāined, *chayned, *pa. par.* or *a.* [CHAIN, *v.*]

A. *As pa. par.:* (See the verb).

B. *As adj:* Furnished or provided with a chain or collar.

"*Chayned. Torquatus.*"—*Huloet.*

ȼhāin'-ing, * ȼhāyn-ing, *s.* [CHAIN, *v.*]

A. & B. *As pr. par. & par.* (In senses corresponding to those of the verb).

C. *As substantive:*

1. *Ord. Lang.:* The act of fastening with a chain (*lit. & fig.*).

"The *chayninge* and tetenge of the grete hound Cerberus."—*Trevisa*, ii. 161.

2. *Sewing & Weaving:* A system of loopings on a single thread by which stocking-web is formed.

"The rib-needles intersecting the plain ones, merely lay hold of the last thread and, by again bringing it through that which was on the rib-needle before, . . . ve it an additional looping which traverses the line of *chaining* and raises the rib above the plain intervals which have only received a single knitting."—*Ure: Dictionary of Arts, Manufactures, and Mines, Hosiery.*

† **ȼhāin'-lēss,** *a.* [Eng. **chain**; **-less.**] Free from chains, unfettered.

"And, like a brave in *chainless* triumph, went
Up through the blue resounding firmament."
Hemans: The Meeting of the Bards.

† **ȼhāin'-lēt,** *s.* [Eng. *chain*, and dimin. suff. *-let.*] A little chain.

"What plumage waved the altar round
How spurs, and ringing *chainlets* s ound."
Scott: The Lay of the Last Minstrel, vi. 6.

* **ȼhaip,** *v.* [Fr. *échapper.*] To escape.

* **ȼhaipes, ȼhā-pis,** *s. pl.* [CHEAP.] Price, rate, established value of goods.

"'The *chapes* of the country,' the ordinary rate the average price . . ."—*Gl. 1686.*

ȼhāir, * **ȼhaier,** * **ȼhaiere,** * **ȼhayer, ȼhaere, ȼhayre, ȼhayere,** *s. & a.* [O. Fr. *chaiere, chaere*; Fr. *chaire*; Port. *cadeira*; Wel. *cadair*, from Lat. *cathedra* = a chair.] [CATHEDRAL.]

A. *As substantive:*

I. *Ordinary Language:*

1. *Literally:*

(1) A movable seat with a back, intended to accommodate one person.

"Up a *chaere* he sat adoun."—*Robert of Gloucester*, p. 91.

"If a *chair* be defined a seat for a single person with a back belonging to it, then a stool is a seat for a single person without a back."—*Watts: Logick.*

(2) A kind of carriage. Originally a sedan; now a small carriage for a single person, an invalid; a Bath-chair.

"Even kings might quit their state to share
Contentment and a one-horse *chair*."
T. Wharton: Pastoral and the One-horse Chair.

2. *Fig.* (*Chair* or *chair-day*): The evening or close of life.

"Bring thy father to his drooping *chair*."
Shakesp.: 1 Henry VI., iv. 3.

II. *Technically:*

1. A vehicle for one person, carried by two men. [SEDAN-CHAIR.]

"Gay pats my shoulder, and you vanish quite,
Streets, *Chairs*, and Coxcombs rush upon my sight."
Pope: Epist to Mrs. Blount.

2. The seat of the president of an assembly; a seat of authority or dignity.

". . . the *chair* of the House of Commons."—*Macaulay: Hist. Eng.*, ch. v.

"The committee of the Commons appointed Mr Fym to *take the chair*."—*Clarendon.*

To put into the chair: To elect as president of a meeting.

"John Hampden, the most ardent Whig among them, was *put into the chair*."—*Macaulay: Hist. Eng.*, ch. xi.

3. The position or office of a professor; a professorship.

4. *Engineers.:* An iron block or socket used upon railways to support and secure the rails.

* 5. A vehicle drawn by one horse.

B. *As adjective:* (See the compounds).

¶ Obvious compounds: *Chair-back, chair bottom, chair-maker.*

Chair-back machines: These machines may be band or jig-saws, which cut out the curved back-piece which is placed on the top of the pillars of the chair-back. Moulding or rounding machines for chair-backs have a holder for the stuff, which is moved against a rotary cutter of peculiar shape, the stuff travelling in a prescribed path, so as to receive the conformation desired.

chair-bed, *s.* A bed or chair which folds up or down at will so as to be used either as a bed or chair.

chair bolt, *s.* A screw-bolt for fastening down rail-chairs to the sleepers.

***chair-bow, *chare bowe,** *s.* The back of a chair.

"*A chare-bowe. fultrum.*"—*Cath. Anglicum.*

chair-maker, *s.* A maker of chairs.

Chair-maker's saw:

1. A diminutive form of the ordinary frame-pit saw, in which the blade is strained by buckles and wedges. The work is clamped to the bench while sawing.

2. A scroll-saw especially adapted for getting out chair-stuff, such as backs and legs which have curves which cannot be readily bent, or of stuff which cannot be readily bent to shape

chair-organ, *s.*

Music: A choir-organ placed in a separate case in front of the great organ and at the back of the performer.

chair-rack, *s.*

Carpent.: A moulding round a room on which the chairs rest so as to keep them from the wall.

chair-seat, *s.* The seat of a chair.

Chair-seat boring-machine: A machine for the systematic and rapid boring of the small vertical holes in a chair-seat frame, to be occupied by the strips of cane or rattan, or the larger holes for the pillars and spindles of the back.

Chair-seat machine: Various machines. *Spec.*—A planing one, for rounding out the bottoms of the chairs, or one for cutting grooves in the chair seat.

chair spring, *s.*

Upholstery: A spring underneath the hinged seat of a chair, which gives it a certain resilience, and encourages a tilting or rocking motion.

chair web, *s.* A scroll-saw.

çhäir, * **çhayre,** *v.t.* [CHAIR, *s.*]

1. To install.

"*Chayred* or stalled, *cathedratus.*"—*Huloet.*

2. To carry about in a chair in triumph; a compliment frequently paid in former times to a candidate at an election by his supporters and admirers

"The Conservative cause triumphs' in the person of its Eton champion. The day the member was *chaired*, several men in Connaught's rooms were talking over their triumph."—*Disraeli: Coningsby*, bk. v., ch. ii.

çhäired, *pa. par.* or *a.* [CHAIR, *v.*]

çhäir'-iŋ, *pr. par., a., & s.* [CHAIR, *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As subst:* The act of carrying in a chair.

"As the day fixed for the *chairing* approached, Danvers became uneasy."—*Theodore Hook: Sayings and Doings of Danvers.*

çhäir'-maŋ, *s.* [Eng. *chair*, and *man.*]

1. One who takes the chair at a meeting; the president of an assembly.

"In assemblies generally one person is chosen *chairman* or moderator, to keep the several speakers to the rules of order."—*Watts.*

2. The president of a company or society

*3. One whose trade it was to carry a sedan-chair, or wheel a Bath-chair.

¶ The elected chairman or president of the House of Representatives is called the Speaker. [SPEAKER.] When the house resolves itself into committee of the whole the Speaker vacates the chair, which is taken by the Chairman of Committees.

çhäir'-maŋ-ship, *s.* [Eng. *chairman*; *-ship.*] The position or office of a chairman; the time during which any one is chairman.

çhäiṣe, *s.* & *a.* [Fr. *chaise* = a seat, a chair; a Parisian pronunciation of *chaire.*] [CHAIR.]

A. *As substantive:*

1. *Lit:* A light two-wheeled carriage, to accommodate two persons, drawn by one horse, and provided with a calash top.

2. *Fig.:* Any vehicle.

"Instead of the chariot he might have said the *chaise* of government, for a *chaise* is driven by the person that sits in it."—*Addison.*

B. *As adj.:* (See the compounds).

chaise-cart, *s.* A light cart, with springs, used for conveying light goods or parcels expeditiously.

chaise-house, *s.* A covered place in which to keep a chaise; a coach-house.

chaise-lounge, *s.* A kind of sofa open at one end. (*Ogilvie.*)

***çhäl-ṣol, * chei-sel, * chey-sil,** *s.* [O. Fr. *chaisel*; Fr. *chasuble*; from Mod. Lat. *camisile*, from *camisa* = a shirt.] Fine linen used in the Middle Ages.

"Pilche and *chesel* al bibled."—*Saxon Sagas*, 1819.

***çhäis'-ti-fie,** *v.t.* [Lat. *castificus* = making chaste or pure; *castus* = chaste, pure; *facio* (pass. *fio*) = to make.] To chastise.

"Heirfor to dant thir attemptatis of Inglismen, I find na thing as expedient as to be considerat with the pepil that may *chastifie* thame maist easly."—*Bellend.*: *Chron.*, b. 3.

çhak (1), *v.t.* [CHECK.] To check.

çhäk (2), *v.i.* [A word formed in imitation of the sound produced by the action.]

1. To gnash, to snatch at an object with the chops, as a dog does. Properly it expresses the sound made, "when he misses his aim" (*Rudd.*) [CHACK.]

2. The sharp sound made by any iron substance, when entering into its socket, as of the latch of a door when it is shut; to click.

¶ *To chak to:* To shut with a sharp sound.

çhak, *s.* [CHECK.] The act of checking, stop.

***çhäk-ër,** *s.* [CHEQUER.] A chess-board.

"Ane auld *chaker* with the men of tabillis thairto."—*Aberd. Reg.*, A. 1541, v. 17.

***çhäk'-il,** *s.* [SHACKLE-BONE.] The wrist (*Scotch.*)

"Gold bracelets on their *chakils* hings,
Their fingers full of costly rings.
Watson's Coll., ii. 10.

***çhäk-kër,** *s.* [CHEQUER, CHEKKER.] The Exchequer. (*Scotch.*)

***çhäl-eṇge,** *s.* [CHALLENGE.] (*Scotch.*)

***chäl'-an-drie, * chal-an-dre, * chal-aun dre,** *s.* [Fr. *calandre*; Lat. *calandrus* = a lark.] A singing-bird, a lark

"*Chalandre* and wodwale."—*Land of Cokayne*, st.

chal-as-tic, * chal-as'-tick, *a.* & *s.* [Gr. χαλαστικος (*chalastikos*) = relaxing; χαλαω (*chalo*) = to relax.]

A. *As adj.:* Having the property or quality of removing stiffness or rigidity of the body.

B. *As subst.:* A medicine having the power or quality described under A.

chal-ā'-za, chal-ā'ze, *s.* [Gr. χαλαζα (*chalaza*) = (1) hail; (2) a pimple.]

1. *Bot:* That part of the seed where the nucleus joins the seminal integuments; it represents the base of the nucleus, and is invarial by opposite the end of the cotyledons

2. *Veterinary:* A disorder in swine, in which the flesh becomes full of tubercles.

3. *Physiol.:* The treddle of an egg, or the knotty kind of string at each end, whereby the yolk and white are connected together.

4. *Med.:* The same as *Chalarium* (q.v.).

chal-ā'-zal, *a.* [CHALAZA.] Of or pertaining to the chalaza. (*Lindley: Introd. to Bot.*)

chal-a-zif'-ĕr-oŭs, *a.* [Mod. Lat. *chalaza*, and Lat. *fero* = to bear.]

Biol.: Noting or pertaining to the layer of albumen surrounding the yolk of an egg, which is called the chalaziferous membrane, and which, when twisted, gives rise to the chalaza. [CHALAZA, 3.]

chal-ā'-zi-um, *s.* [Gr. χαλαζα (*chalaza*) = hail (from the size and shape).]

Pathol.: A small tubercle on the eyelid, commonly called a stye.

çhäl'-bŏt, çha'-bŏt, *s.* [From Fr. *chabot*, dimin. of *cab* or *chab* = a head. (*Littré*).]

Her.: A name given in blazonry to the fish called Bullhead, or Miller's Thumb.

chal-căn'-thite, *s.* [Gr. χαλκός (*chalkos*) = brass; ἄνθος (*anthos*) = a flower, and Eng. suff. *-ite* (*Min.*).]

Min.: A triclinic mineral; colour blue, of different shades, sometimes a little greenish; sub-transparent or translucent; hardness, 2·5; sp. gr. 2·213. Compos.: Sulphuric acid, 32·1; oxide of copper, 31·8; water, 36·1. It occurs in mines in Wicklow and elsewhere.

chăl-çĕ-dŏn'-ic, *a.* [Eng. *chalcedon(y)*; *-ic*] Of or pertaining to chalcedony. (*Brande.*)

chăl-çĕd'-ŏn-y, *s.* [Lat. *calcedonius.* From Chalcedon, Gr. χαλκηδων (*Chalkēdōn*); Χαλκηδών (*Chalkēdón*), a town in Asia Minor.]

1. *Min.:* A cryptocrystalline variety of quartz, having the lustre nearly of wax, and either transparent or translucent. Colour, white, greyish, pale-brown to dark-brown, or black; tendon-colour common; sometimes delicate blue. Also of other shades, and then having other names. It is a true quartz with some disseminated opal-quartz. Composition: Silica, 98·87; sesquioxide of iron, 0·53; carbonate of lime, 0·62. (*Dana.*)

2. *Script.:* It is not quite certain that the *chalcedony* of Rev. xxi. 19, is the mineral now designated by that name. The probabilities, however, are in favour of its being so.

"The first foundation was a jasper, the second a sapphire; the third, a *chalcedony*."—*Rev.* xxi. 19.

¶ Chalcedony of different colours, arranged in stripes or layers, is called *agate*: if the stripes or layers are horizontal it is called *onyx*; *chrysoprase* is green chalcedony, *carnelian* a flesh-red, and *sard* a greyish-red variety (See these words.)

chăl-çĕd'-ŏn-yx, *s.* [Eng. *chalcedon(y)*, and *onyx.*]

Min.: The name applied to those agates in which opaque white chalcedony alternates with the translucent grey variety.

chăl'-çi-dēṣ, chăl'-çis (1), *s.* [The first form is properly the pl. (but used as sing.) of the second, which is Latin from Gr. χαλκις (*chalkis*) = a kind of lizard.]

Zool.: The type-genus of the Chalcidida

chăl-çid'-i-dæ (1), **chăl-çi-æ,** *s. pl.* [Mod. Lat. *chalcid(es)*, or *chalc is*) (1); Lat. fem. pl. adj. suff. *-idæ.*]

Zool.: A family of tropical American snake-like lizards, but with minute feet. Some authorities use this name for the Teiidæ (q.v.).

chăl-çid'-i-dæ (2), *s. pl.* [Mod. Lat. *chalcis* (2), gen *chalcid(is)*; Lat. fem. pl. adj. suff. *-idæ.*]

Entom.: A family of parasitic Hymenoptera, of which Chalcis (2) is the type

chăl'-ci-huitl, *s.* [Native Mexican name.]

Min.: A mineral, identified with jadeite (q.v.), or with turquoise (q.v.)

chăl'-çis (1), *s.* [CHALCIDES.]

chă''-çis (2), *s.* [Gr. χαλκός = copper, from the metallic coloration of the adult species

Entom.: The type-genus of Chalcidæ (2). They are minute parasitic insects, undergoing metamorphosis in the bodies of their hosts.

chăl-çī'-tēṣ, *s.* [From Gr. χαλκίτης (*chalkitēs*) = containing copper, coppery.]

Ornith.: A genus of Cuculinæ, or parasitic Cuckoos. They are adorned with plumage of a brilliant metallic lustre.

chăl-çī'-tis, chăl-çī'-tēṣ, *s.* [Gr. χάλκιτις (*chalkitis*) = the name of a mineral.]

Min.: A disintegrating pyrites, iron or copper, impregnated with vitriol. (*Dana.*)

chăl'-cō-çīte, *s.* [Gr. χαλκός (*chalkos*) = brass; Eng. suff. *-ite* (*Min.*).]

Min.: An orthorhombic mineral of a lead-grey colour, often tarnished with blue or green. Hardness 2·5—3. Sp. gr. 5·5—5·8. It occurs in Cornwall, Scotland, and many other localities. Compos.: Sulphur, 19·90—21·96; copper, 71·31—79·50; iron, 0·28—0·49. (*Dana.*)

chăl'-cō-dīte, *s.* [From Gr. χαλκοειδης (*chalkoeidēs*) = like brass or copper, and Eng. suff. *-ite* (*Min.*) (q.v.).]

Min.: A variety of Stilpnomelane (q.v.). It consists of minute flexible scales of submetallic lustre.

chăl'-cō-grăph, *s.* [From Gr. χαλκός (*chalkos*) = copper, and γραφή (*graphē*) = a drawing or delineation.] An engraving on copper or brass.

chăl-cŏg'-raph-ĕr, *s.* [Gr. χαλκόγραφος (*chalkographos*) = an engraver; χαλκός (*chalkos*) = brass, copper; γράφω (*graphō*) = to write,

to engrave.] One who engraves on brass, copper, or other metal.

"*Chalcography*, or engraving, properly so called, executed with a graver."—*Encyclopædia Britannica.*

chăl'-cō-līte, *s.* [From Gr. χαλκός (*chalkos*) = copper, and λίθος (*lithos*) = a stone.]

Min.: An obsolete and erroneous name given by Werner to Torbernite, which is an ore of uranium and not of copper. (*Dana.*) The "British Museum Catalogue" retains it as a recent species, and makes it a synonym of Cuprouranite (q.v.).

chăl-cŏm'-ĕn-īte, *s.* [Gr. χαλκός (*chalkos*) = brass, copper: μην (*mēn*) = the moon; and Eng. suff. *-ite* (*Min.*).]

Min.: A mineral found in small green crystals in the Argentine Republic, associated with selenite of lead. It appears to be a new selenite of copper. Discovered in April, 1881, by MM. des Cloizeaux and Damour. (*Athenæum*, May 28, 1881.)

chăl-cō-nō'-tūs, *s.* [Gr. χαλκός (*chalkos*) = brass, copper; νωτος (*nōtos*) = back.]

Entom.: A genus of Coleopterous insects of the family Scarabæidæ.

chăl-cō-phā'-site, *s.* [From Gr. χαλκός (*chalkos*) = copper; φασις (*phasis*) = an appearance, and Eng. suff. *-ite* (*Min.*).]

Min.: The same as LIROCONITE (q.v.).

chăl-cō-phyl'-lite, *s.* [Gr. χαλκός (*chalkos*) = brass, copper; φυλλον (*phullon*) = a leaf, from the shape of the crystals, and Eng. suff. *-ite* (*Min.*).]

Min.: A rhombohedral transparent or translucent mineral, from Cornwall and Saxony, of an emerald-green or grass-green colour. Hardness, 2·0. Sp. gr., 2·4—2·66. Compos.: Arsenic acid, 17·51—21·27; oxide of copper, 44·45—58·0; water, 21·0—31·19. (*Dana.*)

chăl-cō-pў'-rite, *s.* [Gr. χαλκός (*chalkos*) = brass, copper; and Eng. *pyrite* (q.v.).]

Min.: A sulphide of copper and iron containing 2 of copper, 2 of iron, and 4 of sulphur = sulphur, 34·9; copper, 34·6; iron, 30·5. It is of a metallic lustre, of a brass-yellow colour, frequently iridescent. It is opaque. Found largely in the Cornwall mines, where 150,000—160,000 tons of ore are smelted annually. Hardness, 3·5. Sp. gr. 4·1—4·3. (*Dana.*)

chăl-cō-pўr-rhō-tite, *s.* [From Gr. χαλκός (*chalkos*) = copper; πυρρότης (*purrhotēs*) = redness, and Eng. suff. *-ite* (*Min.*) (q.v.).]

Min.: A variety of Pyrrhotite (q.v.). (*Brit. Mus. Cat.*)

chăl-cō-sid-ēr-ite, *s.* [From Gr. χαλκός (*chalkos*) = copper; σιδηρος (*sidēros*) = iron, and Eng. suff. *-ite* (*Min.*) (q.v.).]

Min.: A variety of Dufrenite (q.v.). (*Brit. Mus. Cat.*)

***chăl-cō-sine, chăl'-cō-zīte,** *s.* [From Gr. χαλκός (*chalkos*) = copper, and Eng. suff. *-ine* (*Min.*).]

Min.: The same as COPPER GLANCE.

chăl'-cō-stĭb-īte, *s.* [From Gr. χαλκός (*chalkos*) = copper; στιβι (*stibi*) = tin, and Eng. suff. *-ite* (*Min.*) (q.v.).]

Min.: An opaque orthorhombic mineral of a metallic lustre, and a colour between lead-grey and iron-grey. Hardness, 3—4. Sp. gr., 4·749—5·015. Compos.: Sulphur, 25·7; antimony, 48·9; copper, 25·4. It occurs at Wolfsberg in the Hartz mountains, and at Guadiz, in Spain. (*Dana.*)

chăl'-cō-trĭch-īte, *s.* [Gr. χαλκός (*chalkos*) = brass, copper; θριξ (*thrix*), genit. τριχός (*trichos*) = hair, and Eng. suff. *-ite* (*Min.*).]

Min.: A name applied to the hair-like forms of red oxide of copper, commonly known as plush copper ore.

Chăl-dā'-ic, *a. & s.* [Lat. *Chaldaicus* = pertaining to Chaldea.]

A. *As adj.*: Of or pertaining to Chaldea.

B. *As substantive*:

1. A native or inhabitant of Chaldea.

2. The language of the Chaldeans, Chaldee.

Chaldaic Christians, *s. pl.* [So named because their head church is in what was anciently termed Chaldea.]

Ch. Hist.: The chief name given in the East to the interesting sect more commonly known in the West as Nestorians. In parts of India they are called St. Thomas Christians, from the erroneous notion that they were first converted to Christianity by the Apostle Thomas. Their patriarch resides in a monastery near Mosul, not far from the site of ancient Nineveh. Like Nestorius, they attribute to Jesus two natures, each with its own personality. They reject image worship. In their liturgic services they employ the Syriac language. When first they arose, in the fifth century, they were persecuted by the Eastern Church, but after the rise of the Arabian "prophet" they found favour with the Mohammedans, whose policy it was to support all detached sects against the Catholic Church which they feared. Afterwards they became so noted for missionary work as to elicit the admiration even of the historian Gibbon. Within the present century they have suffered severely from Mohammedan fanaticism. American and other missionaries have also diffused Protestantism among them. One of these Americans, Rev. Asahel Grant, wrote a book which excited some attention, in which he maintained that the "Nestorians" were originally of Jewish descent, deriving their origin from the ten lost tribes.

† Chăl-dā'-ism, *s.* [Eng. *Chalda(ic)*; *-ism.*] An idiom or peculiarity of the Chaldean language.

Chăl-dē'-an, *a. & s.* [Lat. *Chaldæus* = pertaining to Chaldea.]

A. *As adj.*: Of or pertaining to Chaldea.

"He knows *chalk* from *cheese*: he knows on which side his bread is buttered."—*Notes and Questionary*, ed 1854, p. 37.

Walk your chalks! [Walk.

II. *Technically:*

1. *Min. & Chem.:* A massive, opaque carbonate of lime, of a white, greyish, or yellowish colour, with an earthy fracture. Sp. gr., 1·8–2·8. Dana places it along with calcareous marl, under the heading soft, compact limestone, constituting his 21st variety of the mineral species Calcite. It forms extensive rocks in the south and south-east of England.

2. *Geology and Palæontology:*

(1) *Spec.:* A rock which, when pure, as it often is, is made up of the constituents given under II. 1 *Min.* (q.v.). A great belt of it crosses England diagonally from the eastern to the southern coast, and it is impossible to approach London from the east, west, north, or south without having chalk rocks, at a distance often very limited, beneath one's feet. Their appearance is familiar, owing to their being conspicuously displayed in the chalk cliffs of Dover, and in various chalk pits in the southern counties, on the escarpments on the sides of the Northern and Southern Downs (Downs) and in railway cuttings. The chalk, properly so called, consists of the highest portion of the Upper Cretaceous System, and is divided into Upper White Chalk with Flints and Lower White Chalk without Flints. [Flint, *Geol.*] The larger animal fossils of the White Chalk consist of Crinoids and other Echinoderms; Cephalopod Molluscs, specially Ammonites, Baculites, Belemnites; Brachiopods, such as Terebratulæ, &c.; of other Molluscs, Rudistidæ, &c.; of fish, teeth of Cestracionts; of reptiles, Pterodactyls, Turtles, and Oviparous Saurians. Of the smaller organisms, Globigerinæ, and other Foraminifers abound; in fact, chalk is mainly composed of these cemented together by a calcareous paste. The examination by Sir Leopold McClintock, Dr Carpenter, Sir Wyville Thomson, Prof. Huxley, Dr. Wallich, and others, of the Atlantic ooze obtained in connection with the laying of the telegraphic cable to America, and in the subsequent exploratory expeditions of the Porcupine, Challenger, &c., have shown that the ooze now being deposited at a depth of from 5,000 to more than 15,000 feet in the Atlantic is essentially chalk, with Globigerinæ and other Forminifers, the former apparently identical with existing species. Most other organisms are extinct, though a few are not. This discovery does not shorten by an hour the period which has elapsed since the chalk first began to be formed, but only proves that a process which was thought to have terminated or intermitted still goes on. As chalk is a deep-sea formation the vegetable fossils of the Chalk rocks are unimportant.

(2) *Gen.:* The Cretaceous rocks in general, whatever their actual composition. [Cretaceous Formation or System.]

3. *Comm.:* When purified, chalk is called whiting and Spanish white in England. Pure chalk should dissolve readily in dilute muriatic acid, and the solution should afford no precipitate with water of ammonia. Chalk is burnt into lime in great quantities, in which state it is used as a manure, and for making mortar and whitewash.

"*Chalk* is of two sorts; the hard, dry, strong *chalk*, which is best for lime; and a soft unctuous *chalk*, which is best for lands."—*Mortimer.*

Black chalk: A carbonaceous variety of shale.

Brown chalk: A familiar name for umber.

French chalk (*Min.*): [Soapstone].

Red chalk: A clay deeply coloured with the peroxide of iron, of which it generally contains 15—18 per cent.

4. *Art: A drawing in chalks* = one executed with chalk pencils of different colours.

B. *As adjective:*

1. Consisting in large measure of chalk, as a chalk down.

2. Derived from chalk or occurring in it, as a chalk flint.

3. Belonging to the time when the chalk was deposited, as the chalk formation.

chalk-bed, *s.* A layer of chalk.

chalk-cutter, *s.* A man who digs up chalk.

chalk-drawing, *s.* A drawing sketched and filled in with black or coloured chalks.

chalk-line, *s.* A cord rubbed with chalk or similar material, used by artificers for laying down straight lines on the material as a guide for a cutting instrument. (*Knight.*)

Chalk-line reel: A spindle or vessel on which a chalk line is wound. (*Knight.*)

chalk-marl, *s.*

Geol.: An argillaceous stratum situated just under the Lower White Chalk without flints. It contains thirty-two species of Ammonites, seven peculiar to it. There are also Scaphites, Turrilites, &c.

chalk-stone, *s.*

1. *Ord. Lang.:* A lump of chalk.

"He maketh all the stones of the altar as *chalkstones* that are beaten asunder."—*Isaiah* xxvii. 9.

2. *Med.:* Gouty concretions in the tissues and joints, especially of the feet and hands, consisting chiefly of sodium urate $C_5N_4H_3NaO_3$. They are composed of bundles of crystals of urate of soda, and often attain to a considerable size, causing much deformity. Chalk stones are the morbid products of the gouty diathesis which in this way seeks to eliminate itself.

"Also, in many gouty persons, but not in all . . . what are called *chalk-stone form*; concretions that look exactly like chalk collect around and outside the joint . . . and lying in general immediately below the skin."—*Watson: Lectures on the Principles and Practice of Physic*, lect. lxxxi.

chæ-mæ-mēl'-ĭs, *s.* [Gr. χάμαι (*chamai*) = on the ground, and μῆλον (*melon*) = an apple.]

Bot. : A genus of appleworts, deriving their name from their low growth. The genus was founded by Lindley to comprehend a dwarf shrub very like Box, a native of the sea-cliffs in Madeira, having simple shining evergreen, mostly entire leaves, and flowers growing in clusters, which are leafy at the base.

chām-æ-nē'-ma, *s.* [Gr. χάμαι (*chamai*) = on the ground, and νῆμα (*nema*) = feeding.]

Bot. : A supposed genus of Leptotricheous Algæ, consisting of dusky-coloured jointed filaments, forming flocks in various syrups. Doubtless the mycelia of some fungi, such as Penicillium. (*Griff. & Henfrey.*)

chām-æ-peū'-pē, *s.* [Gr. χάμαι (*chamai*) = on the ground, and πεύκη (*peukē*) = a fir.]

Bot. : A genus of plants belonging to the Compositæ, allied to the plume thistles, Cirsium, on the one hand, and to the true thistles, Carduus, on the other. Leaves generally lanceolate, smooth, but, as well as the stem, covered below with a white cottony substance. Flower-heads one to two inches in diameter, arranged in corymbs, or long leafy racemes; corollas purple or white. There are fifteen known species, all natives of the Mediterranean region.

chām-æ'-pĭt-ys, *s.* [Gr. χαμαίπιτυς (*chamaipitus*) = ground-pine.]

Bot. : The herb Ground-pine, a plant of the genus Cressa.

chām-æ-rhō'-dos, *s.* [From Gr. χάμαι (*chamai*) = on the ground, in compos. dwarf, and ῥόδον (*rhodon*) = a rose.]

Bot. : A genus of the Rose family. The species are perennial plants, seldom attaining more than one foot in height, and generally having decumbent stems furnished with alternate three or four-parted leaves, about half an inch long. Flowers small, white or purple. The species are found in Siberia, Northern China, and Thibet, and also in the Rocky Mountains.

chām-æ-rŏps, *s.* [Gr. χαμαίροψ (*chamairŏps*) = an unidentified plant mentioned by Pliny.]

1. *Bot.* : A genus of plants belonging to the order Palmaceæ. The Dwarf Fan-Palm, so called from its low growth. It is the most northerly of the Palm genera, and consists of ten or twelve species. *Chamærops humilis* extends as far north as Nice, and the leaves of it are used for making hats, brooms, and baskets, and for thatching purposes. *C. Fortuni*, a native of China, furnishes a coarse brown fibre used for hats and a waterproof cloth called Bo-e.

2. *Paleont.* : A Lower Miocene species (*Chamærops helvetica*) has been found in Switzerland.

chām-æ-scī-ăd'-I-ŭm, *s.* [Gr. χάμαι (*chamai*) = on the ground, and σκιάδιον (*skiadion*) = a little shade ; σκία (*skia*) = a shade, a shadow.]

1. *Zool.*: An antelope, *Rupicapra tragus*, formerly called *Antilope Rupicapra*. In its physical character it is somewhat aberrant,

CHAMOIS.

approaching the sheep and goats. It is about three feet three inches high, with two parallel horns, straight for about six or seven inches, and then sharply bent back, and no beard. It is densely clothed with hair. It is found on high mountain ranges, specially on the Alps, the Pyrenees, the Carpathian mountains, and those of Greece, besides which it is believed to exist also on those of the Taurus and of the Caucasus.

"Those are the beasts which ye shall eat: the ox, the sheep, . . . the wild ox, and the *chamois*."—*Deut.* xiv. 4, 5.

2. *Comm.* (*Shammy, Chamois-leather*): The name indicates that this leather is made from the skin of the Chamois (*Rupicapra tragus*) but the skins of sheep, goats, deer, calves, and the split hides of other animals, are used for making this kind of leather; the superior kinds of which are called *chamois*, and the inferior, *wash-leather*. The skins are unhaired in a lime-vat, and scraped on a beam in the ordinary way. The lime is removed in a bath by lactic or acetic acid, and the skins are then *frizzed*. This process consists in rubbing the skins with pumice or the blunt end of a round knife, until the grain is removed, the skin softened, and reduced to an even thickness throughout. The skins are then pressed to expel water, fulled by wooden hammers, spread, treated with oil—fish-oil being preferable—rolled up and again fulled, to distribute the oil throughout the bundle. They are then taken out, unfolded, dried, re-oiled, and again rolled and fulled. These processes are repeated till the effect is fully accomplished, heat being applied during the latter portion, by means of suspending the skins in a store-room. Superfluous oil is removed by a short steeping in a dilute alkaline lye; the skins are then wrung, dried, supplied by stretching, and polished by rolling. (*Knight.*)

chamois-leather, *s.* [CHAMOIS, 2.]

ċham'-oi-site (oi as wâ), *s.* [From Chamoson, where it occurs; and Eng. suff. *-ite* (*Min.*) (q.v.).]

ċhăm-pagne', *ċham-pāne', ċhăm-paign' (1) (pagne and **paign** as **pān),** *s.* [From *Champagne*, in France, where it was

originally made.] A kind of brisk sparkling wine. Champagnes are divided into four cuts, viz. sparkling tenant, ordinary sparkling, Half Sparkling, and Tisane de Champagne, or they may be classed as still, sparkling, and semi-sparkling. They are either sweet or dry, according to the extent to which fermentation has been carried. In the manufacture of champagne black grapes of the first quality are usually employed. The breakage of the bottles in these sparkling wines amounts frequently to thirty per cent. Much of the Champagne sold is a spurious imitation, being manufactured from a cheap white wine sweetened with sugar, and coloured. Sometimes it consists entirely of wine made from gooseberries or rhubarb gratoned, and charged with carbonic-acid gas. The Champagnes produced in California are considered equal to those of Europe.

Scott: The Lay of the Last Minstrel, iii. 5.

4. One who is the acknowledged superior in any exercise.

5. A strong supporter or defender of anything.

* **II.** *Law*: One who maintained a cause by wager of battle. When a tenant in a writ of right pled the general issue, i.e., that he had more right to hold than the demandant to recover, and offered to prove it by the body of his champion, the demandant had the option of refusing or accepting the proposal. If he did the latter, then the tenant's champion being produced threw down his gage or glove, which his opponent's champion took up. A piece of ground, sixty feet square, was then enclosed with lists. Within it the champions, if brave enough, fought till the stars appeared, and if the champion of the tenant held his own till that time, he gained the victory for his employer or friend, while if vanquished the land for which he contended was lost. Sometimes the fight was [illegible] prematurely by one of the champions proving recreant, and pronouncing what [illegible] alone calls "th horrible word craven." The man who did so was believed to be [illegible] degraded, and was never to [illegible] put on a jury or even allowed to [illegible] witness in a court of law.

"In our common law [illegible] is [illegible] him that [illegible] the [illegible] and [illegible] him that fights in the case of battle."

5. The event, success, or result of things.

"Turne we our steede; that both in equall tilt
May meete againe, and each take happy *chaunce*."
Spenser: F. Q., III. viii. 18.

6. An unlucky event; misfortune, ill-luck.

"You were us'd
To my extremity was the trier of spirits,
That common *chances* common men could bear."
Shakesp.: Coriolanus, iv. 1.

7. The possibility or probability of any occurrence.

"Thus he taught the game of hazard,
Thus displayed it and explained it,
Running through its various *chances*."
Longfellow: The Song of Hiawatha, xvi.

8. An opportunity offered.

¶ *The last chance:* The last remaining hope.

The main chance: The principal or most important opportunity offered to one.

To take care of or *mind the main chance:* To watch one's best opportunity to look after oneself, or one's own interests, before those of others.

¶ (1) After pointing out the heathenish character of the three words *chance*, *fortune*, and *fate*, Crabb thus distinguishes between them:—"In this ordinary sense *chance* is the generic, *fortune* and *fate* are specific terms: *chance* applies to all things personal or otherwise; *fortune* and *fate* are mostly said of that which is personal. *Chance* neither forms orders or designs; neither knowledge or intention is attributed to it; its events are uncertain and variable: *fortune* forms plans and designs, but without choice; we attribute to it an intention without discernment; it is said to be blind: *fate* forms plans and chains of causes; intention, knowledge, and power are attributed to it; its views are fixed, its results decisive. A person goes as *chance* directs him when he has no express object to determine his choice one way or other; his *fortune* favours him, if without any expectation he gets the thing he wishes; his *fate* wills it, if he reaches the desired point contrary to what he intended. Men's success in their undertakings depends oftener on *chance* than on their ability [?]; we are ever ready to ascribe to ourselves what we owe to our good *fortune*; it is the *fate* of some men to fail in every thing they undertake."

(2) *Chance* and *probability* are thus discriminated:—"These terms are both employed in forming an estimate of future events; but the *chance* is either for or against; the *probability* is always for a thing; a *chance* is but a degree of probability."

(3) The following are stated to be the differences between *chance* and *hazard*:—"Both these terms are employed to mark the course of future events, which is not discernible by the human eye. With the Deity there is neither *chance* nor *hazard*; His plans are the result of omniscience, but the designs and actions of men are all dependant on *chance* or *hazard*. *Chance* may be favourable or unfavourable, more commonly the former; *hazard* is always unfavourable; it is properly a species of *chance*. There is a *chance* either of gaining or losing: there is a *hazard* of losing."

(4) The following are the differences between *accident* and *chance*. "... *Accident* and *chance* may be used indifferently in the colloquial expression to happen by chance or by accident; but the word *accident* is used only in respect to particular events, as it was pure *accident*; but *chance* is employed to denote a hidden senseless cause of things as opposed to a positive intelligent cause." (*Crabb: Eng. Synon.*)

(5) The *Penny Cyclopædia* states briefly and pointedly that the word *chance* has been used in two senses, as opposed to providence and as opposed to certainty.

B. *As adj.:* Happening accidentally; casual, accidental, fortuitous.

"Now should they part, malicious tongues would say,
They met like *chance* companions on the way."
Dryden.

* **C.** *As adv.:* Perchance, accidentally, fortuitously, unexpectedly.

"If *chance* by lowly contemplation led,
Some kindred spirit shall enquire thy fate."
Gray: Elegy.

¶ Compounds of obvious meaning: *Chance-comer*, *chance-gift*, *chance-hit*, *chance-mat*, *chance-poised*, *chance-sown*.

chance-medley, * **chaud-medley,** *s.* & *a.*

A. *As substantive:*

1. *Ord. Lang.:* Chance, luck, a haphazard result.

"Wherefore they are no twain, but one flesh; this is true in the general right of marriage, but not in the *chance-medley* of every particular match."—*Milton: Tetrachordon.*

2. *Law:* The casual slaughter of a man, not altogether without the fault of the slayer, when ignorance or negligence is joined with the chance; as if a man lop trees by a highway-side, by which many usually travel, and cast down a bough, not giving warning to take heed thereof, by which bough one passing by is slain: in this case he offends, because he gave no warning, that the party might have taken heed to himself.

"But the *self-defence*, which we are now speaking of, is that whereby a man may protect himself from an assault, or the like, in the course of a sudden brawl or quarrel, by killing him who assaults him. And this is what the law expresses by the word *chance-medley*, or (as some rather choose to write it), *chaud-medley*, the former of which in its etymology signifies a casual affray, the latter an affray in the heat of blood or passion; both of them of pretty much the same import."—*Blackstone: Commentaries*, b. iv., c. 14.

B. *As adj.:* Depending on chance or fortune.

"And, artless as thou art, whom thou wilt choose
Though much depends on what thy choice shall be,
Is all *chance-medley*, and unknown to me."
Cowper: Tirocinium.

chance, * **chaunce,** * **chaunse,** *v. i.* & *t.* [Chance, *s.*]

A. *Intransitive:*

1. *Of things:* To happen, to fall out, to befall, to fortune, to occur accidentally.

"... natural selection can do nothing until favourable variation *chances* to occur."—*Darwin: Origin of Species* (ed. 1860), ch. vi., p. 177.

¶ It is frequently used impersonally.

chan-çel-lôr, * **chaun-çel-er,** * **chaun-sel-er,** * **chaun-sel-ere,** *s.* [In A.S. *cancelere* (Bosworth); Icel. *kanzellari*; Sw. *kansler*; Dan. *cantsler*; Dut. *kanselier*; Ger. *kanzler*; Fr. *chancelier*; O. Fr. *chancelier*, *cancelier*; Sp. *canciller*, *cancellario*; Port. *chanceller*, *cancellario*; Ital. *cancelliere*. From Low Lat. *cancellarius* = originally an officer having charge of records which stood near the lattice-work, or bar, which fenced off the seat of the judge or judges from the rest of the court. Class. Lat. *cancelli* = an enclosure of wood, a railing, lattice, &c.; pl. of *cancellus* = a grating; dimin. of *cancer* = a crab.]

I. *In ancient times:*

* 1. *Originally* (*in the Roman Empire*): A petty officer stationed at the fence of bars or lattice-work in a law-court, to introduce such functionaries as were entitled to pass inside. The Emperor Carinus, the immediate predecessor of Diocletian, gave great offence by making such a cancellarius prefect of Rome.

* 2. *Next* (*in the Eastern Empire*): A secretary who sat inside the lattice-work to write, but who, in the lower empire, was invested also with judicial functions, and ultimately with a superintendence over the other officers of the empire. From this high dignity to that of a modern English Lord Chancellor the transition is easy.

3. *Then* (*in the Church of Rome during mediæval times*): An officer standing to the bishop much in the same relation as the cancellarius of the lower empire did to the emperor.

II. *In more modern times:*

1. *On the Continent:* An officer of the highest rank, with a certain jurisdiction over other civil functionaries. The powers of the chancellor, however, varied in the different nations.

2. *In England:*

(1) *In the Civil Government:* A name applied

to various functionaries, some of them of very high rank; viz., to—

(a) *The Lord Chancellor:* Originally he was the king's chief secretary, to whom petitions were referred, whence he was called *referendarius*. This title subsequently gave place to chancellor, which first occurs, according to Selden, in English history about A.D. 920. Being generally an ecclesiastic, he became keeper of the king's consciences. Having to express the sovereign's views in cases appealed to him from the Courts of Law, he gradually acquired a great legal standing himself, and finally developed into the potent personage now denominated the Lord Chancellor, or more fully the Lord High Chancellor. He is now the highest judicial functionary in the kingdom, and ranks above every temporal lord, excepting those of the blood royal; he is also above every spiritual lord, except the Archbishop of Canterbury; he is keeper of the great seal; he presides in the House of Lords, of which he is prolocutor; he is a cabinet minister and privy councillor; presides in what was the Court of Chancery (once spelled *chancelry*), but is now the Chancery Division of the Supreme Court; appoints all justices of the peace throughout the kingdom; is the general guardian of all infants, idiots, and lunatics; visitor of the hospitals and colleges of royal foundation; and patron of all livings under twenty marks in value. He goes out with the ministry of which he is a member.

(b) *Chancellor of the Exchequer:* Properly, the under-treasurer of the Exchequer, the head treasurership being held, not by an individual, but by the Lords Commissioners of the Treasury. The Chancellor has, however, a very powerful voice in connection with the Exchequer. He must be in the House of Commons, and may be its leader, and also Prime Minister.

(c) *Chancellor of the Duchy of Lancaster:* An officer who presides, either himself or by deputy, in the Duchy Chamber of Lancaster, dealing on all matters of equity connected with lands held of the crown in that Duchy.

(d) *In the Universities:* The titular head of a university. The office is only honorary. Under him is a Vice Chancellor, who is the actual working head.

(3) *In the Church:* Specially two kinds of officers, viz.—

(a) *Chancellor of a Cathedral:* One of the four chief dignitaries in the cathedrals of old foundation.

(b) *Chancellor of a Diocese or of its Bishop:* A law officer who acts as vicar-general for the bishop, and holds courts for him to decide on cases tried by ecclesiastical law.

(4) *In Heraldry:* A functionary, viz., *the Chancellor of the Order of the Garter*, or other military orders. An officer who acts as secretary to the order, sealing the commissions and mandates of the Assembly of the Knights.

3. *In Scotland:* Till the Union, in 1707, there was a Chancellor of Scotland, who was the head of law as well as equity, thus having gained a step beyond what the English Lord High Chancellor had attained, he being specially head in equity, though with superiority to the judges in law. There are also a Chancellor and Vice-Chancellor in each of the Scottish Universities. The foreman of a jury was also sometimes called its chancellor. (*Scott: Heart of Mid-Lothian.*)

4. *In Ireland:* There is a Lord High Chancellor of Ireland. There are Chancellors and Vice Chancellors in the Irish Universities and colleges.

†5. A secretary.

"One Gilbert Peck, his *chancellor*." — *Shakesp: Henry VIII*, v. 1

ċhan-ċĕl-lòr-ship, *s.* [Eng. *chancellor; ship.*] The office or position of chancellor.

***ċhàn-ċĕl-lòr-ў,** *s.* [Eng. *chancellor; -y.*] The office of a chancellor. (*The Life of Becket*, 452.) (*Herbert Coleridge.*)

ċhan-ċĕr-y, *ċhăn-ċèr-ie, *ċhan-ċer-ye, *ċhăn-ċĕl-ĕr-ie, *ċhaun-ċel ler-ie, *s.* & *a.* [O. Fr. *chancellerie, chancelrie* = "a chancery court, the chancery seale office, or court of every parliament" (*Cotgrave*), from Low Lat. *cancellaria* = a place where records are kept, a record-office of a chancellor, from *cancellarius* = a chancellor.]

A. *As substantive:*

1. The Court of Chancery was the highest court of judicature next to the House of Lords. The Lord Chancellor presided in this court, having under him the Lords Justices and Vice-Chancellors, who act for him in separate courts, and the Master of the Rolls, who had the keeping of all the rolls and records of the Court of Chancery, and also presided in a court of his own. The Court of Chancery was a court of equity. Under the Judicature Act of 1873 the powers and jurisdiction of the Court of Chancery were transferred to the High Court of Justice, and it now exists as the chancery division of that court. In the United States there are Courts of Chancery in several of the original thirteen states, but in most of the states the principles of equity are administered in the higher courts of law.

4. To take or substitute one garment for another.

5. To turn sour or acid, to become tainted.

¶ (1) Crabb thus distinguishes between *to change, to alter,* and *to vary:*—We *change* a thing by putting another in its place; we *alter* a thing by making it different from what it was before; we *vary* it by *altering* it in different manners and at different times. We *change* our clothes whenever we put on others: the tailor *alters* the clothes which are found not to fit, and he *varies* the fashion of making them whenever he makes new . . . A thing is *changed* without *altering* its kind; it is *altered* without destroying its identity, and it is *varied* without destroying the similarity."

(2) He thus discriminates between *to change, to exchange, to barter,* and *to substitute:*—"The idea of putting one thing in the place of another is common to all these terms, which varies in the manner and the object. *Change* is the generic, the rest are specific terms: whatever is *exchanged, bartered,* or *substituted,* is changed; but not *vice versâ. Change* is applied in general to things of the same kind, or of different kinds; *exchange* to articles of property or possession; *barter* to all sorts of merchandise; *substitute* to all matters of service and office. Things rather than persons are the proper objects for *changing* and *exchanging,* although whatever one has a control over may be *changed,* or *exchanged;* a king may *change* his ministers; governments *exchange* prisoners of war. Things only are the proper objects for *barter;* but, to the shame of humanity, there are to be found people who will *barter* their countrymen, and even their relatives, for a paltry trinket. *Substituting* may either have persons or things for an object; one man may be *substituted* for another, or one word *substituted* for another. The act of *changing* or *substituting* requires but one person for an agent; that of *exchanging* and *bartering* requires two: a person *changes* his things or *substitutes* one for another; but one person *exchanges* or *barters* with another. *Change* is used likewise intransitively, the others always transitively; things *change* of themselves, but persons always *exchange, barter,* or *substitute* things. In the figurative application these terms bear the same analogy to each other. A person *changes* his opinions; but a proneness to such *changes* evinces a want of firmness in the character. The good king at his death *exchanges* a temporal for an eternal crown. The mercenary trader *barters* his conscience for paltry pelf. Men of dogmatical tempers *substitute* assertion for proof, and abuse for argument." (*Crabb: Eng. Synon.*)

çhânge, *s. & a.* [CHANGE, *v.*]

A. *As substantive:*

I. *Ordinary Language:*

1. *Literally:*

Still varying to the last!" *Dryden.*

**2. Figuratively:*

(1) Death; the moment of exchanging life for death.

(2) Novelty, variety.

"Perhaps you would like a kidney instead of a devil? It will be a little *change*."—*Disraeli: Henrietta Temple*, bk. vi., ch. xx.

II. *Technically:*

1. *Comm.:* A place where merchants and others meet to transact business. (Properly a curtailed form of *exchange,* q.v.).

"The bar, the bench, the *change*, the schools and pulpits are full of quacks, jugglers, and plagiaries." *L'Estrange.*

"He found that he could not go on *Change* without being followed round the piazza by goldsmiths. . . ."—*Macaulay: Hist. Eng.*, ch. xx.

2. *Hunting:* Applied to a stag, whose scent has been crossed by chance by hounds in pursuit of another, and who is pursued in his turn.

3. *Music:*

(1) The word used as the short for change of key or modulation. Changes are of three kinds: the Diatonic, the Chromatic, and the Enharmonic changes. (See these words.) (*Groves.*)

(2) An alteration or permutation in the order in which a set of bells is rung; alternate or varied peals rung on bells.

"Four bells admit twenty-four *changes* in ringing, and five bells one hundred and twenty."—*Holder: Elements of Speech.*

4. *Math.:* The permutations, alterations, or variations which any number of things may undergo, or are capable of in respect of position, order, &c.

5. *Astron.:* The phases through which the moon passes.

"Take seeds or roots, and set some of them immediately after the *change*, and . . . ers of the same kind immediately after the full."—*Bacon: Nat. Hist*

6. An inn or ale-house [CHANGE-HOUSE.]

¶ *Change of voice:*

Music: [LARYNX.] (*Stainer & Barrett.*)

¶ *To ring the changes:*

1. *Lit:* To ring a set of bells in varied peals. [II. 3.]

†2. *Figuratively:*

(1) To play upon words by slight changes in order or meaning.

"Easy it may be to contrive new postures, and *ring* other *changes* upon the same bells."—*Norris.*

(2) To render a money transaction over a counter or bar as complex as possible with the view of fraudulently obtaining back more change than one is entitled to, as for instance a half-sovereign which one has paid and silver for it. (*Slang.*)

¶ Crabb thus distinguishes between *change, variation,* and *vicissitude:*—"*Change* consists simply in ceasing to be the same; *variation* consists in being different at different times; *vicissitude* in being alternately different and the same. All created things are liable to *change;* old things pass away, all things become new; the humours of men, like the elements, are exposed to perpetual *variation;* human affairs, like the seasons, are subject to frequent *vicissitudes.*" (*Crabb: Eng. Synon.*)

B. *As adj.:* (See the compounds.)

*** change-church,** *s.* One who holds various benefices in succession

"Bono . . . was a great *change-church* in Rome."—*Fuller: Worthies, Herts*, i. 429.

change-house, *s.* An inn, an ale-house

"When the Lowlanders went to drink a beer[illegible] cup they go to the public house call[illegible] the *change-house.*"—*Smollett: Humphry Clinker* (sept. 3

change-keeper, *s.* One who keeps an ale-house, or a petty inn. (*Scotch.*)

"That nobody went into the house but the[illegible] brothers.—and Nelson the *change-keeper* and[illegible] poisoned himself."—*Tribals of Some of the Kings*[illegible]

change-pump, *s.* A pump introduced by the successors of Boulton and Watt in connection with the boilers of sea-going vessels, in order to keep a continual change in the body of water, removing the super-salted water and substituting sea water. The change-pump has been superseded by the blow-off cock, which, being turned at intervals, allows a portion of the super-salted water to escape overboard. External condensation and fresh-water boiler-supply are now the mode. (*Knight.*)

change-ringing, *s.* The art or practice of ringing a peal of bells, so as to make the greatest possible number of permutations.

change-wheel, *s.*

Mach.: Change-wheels, having varying numbers of cogs at the same pitch, are used to connect the main arbor of the lathe with the feed-screw, so as to vary the relative rates of rotation and consequently the pitch of the screw to be cut. The first application of change-wheels to a lathe is supposed to have been in a fusee-cutting lathe, described in a work, 1741. The change-wheels are intermediate, and journaled in a bracket, which permits them to be brought into gearing with the rotative and feed wheels respectively. [SCREW-CUTTING LATHE, ENGINE-LATHE.]

¶ *Change-seats, the King's come:* A game well known in Lothian and in the south of Scotland. (*Jamieson.*)

çhânge-a-bil'-i-ty, *** çhaunge-a-ble-te,** *s.* [Eng. *changeable; -ity.*] The quality of being changeable or subject to change; changeableness.

"Repenting whanne it berith *changeablete*, may not be in God."—*Wycliffe: 1 Kings* xv. 11.

çhânge'-a-ble, *** çhaunge'-a-ble,** *a.* [Eng. *change; -able.*]

1. Capable of being changed.

"The *changeable* suits of apparel, and the mantles, and the wimples, and the crisping pins, . . .—*Isa.* iii. 22.

2. Liable to change, fickle, inconstant

"This worldis life that *changeable* is,
Romaunt of the[illegible]

***3.** Having the quality of exhibiting different appearances.

"Now the taylor make thy doublet of *changeable* taffata; for thy mind is a very Proteus."—*Shakesp.: Twelfth Night*, ii. 4.

¶ Crabb thus distinguishes between *changeable, mutable, variable, inconstant, fickle,* and *versatile:*—"*Changeable* is said of the acts of things; *mutable* is said of things and beings; beings are *changeable,* human affairs are *variable. Changeable* respects the outward and opinions of the mind; *mutable* the state of the feelings; *inconstant,* the attachments; the inclinations and attachments; the application of the talents. A *variable* person rejects what he has on[illegible] order to take up something new; a *mutable* person likes and dislikes alternately the same thing; an *inconstant* person likes nothing long; a *fickle* person likes many things successively or at the same time; a *versatile* person has a talent for what he does. *Changeable, variable, mutable,* and *inconstant,* as applied to persons, are often in the bad sense; but *versatility* is a natural gift, which may be employed advantageously. (*Crabb: Eng. Synon.*)

¶ *Changeable chant:* [CHANT.]

Changeable gauge-truck: A means of adjusting wheels to different gauges of tracks by making the wheels adjustable on the axis. (*Knight*)

change-a-ble-ness, ***change-a-ble-ness,** *s.* [Eng. *changeable*; *-ness.*]

Shakesp.: Hamlet, v. 2.

2. *Spec.:* A child substituted, or left in exchange, for another. [II. 1.]

"And her base elfin brood there for thee left:
Such men do *changelings* call, so changed by fairies' theft."
Spenser: Fairy Queen.

¶ In the following passage the child taken, not that left in exchange, appears to be meant

"She, as her attendant, hath
A lovely boy stol'n from an Indian king;
She never had so sweet a *changeling*."
Shakesp. Mids. Night's Dream, ii. 1.

II. *Figuratively:*

1. The fairies being popularly supposed to steal beautiful children, and leave ... their places ugly and stupid ones, the word soon passed into the meaning of a fool, an idiot, or a simpleton

"... turning the babe into a *changeling* at which the mother shuddered, ..."—*Macaulay: Hist. Eng.*, ch. xx.

2. One who wavers or frequently changes his purpose; a waverer or fickle person.

"Yet his nature
In that is no *changeling*. ...

chank-shells, *s. pl.* A name given in the East Indies to certain varieties of the shell *Turbinella pyrum*, fished up by divers in the Gulf of Manaar, on the N.W. coast of Ceylon. There are two kinds, pavel and pattu, one red and the other white; the latter is of little value. These shells are imported into India, where they are sawn into rings of various sizes, and worn on the arms, legs, fingers, and toes by the Hindoos. A third species, opening to the right, is rare, and very highly valued. The demand for these shells, caused by the religious rites of the Hindoos, was so great that 60,000 rix-dollars per annum were received by the Government for the right of fishing for them. Now the fishery is open and free to all

"The natives, in addition to fishing for *chank shells* in the sea, dig them up in large quantities from the soil on the adjacent shores."—*Tennent: Ceylon*, pt. i. ch. i.

chan-ler, *s.* [CHANDLER.] (*Scotch.*)

chanler-chafts, *s.* [CHANDLER-CHAFTS.]

chan-na, *s.* [It. *canna*; Lat. *channe*, *chane*, from Gr. χάννη (*channē*), χάνη (*chanē*) = a sea-fish, so called from its wide mouth: χάσκω (*chaskō*) = to yawn, to gape.]

Ichthy.: The *Serranus cabrilla* of Cuvier, a European fish, resembling the Sea-perch.

***char-folk, *chair-folke, *chare-folke,** *s.* Persons hired to do charing work.

". . . who, instead of their own servants, use *chair-folke* in their houses."—*Fuller: Worthies. Kent*, i. 121. (Davies.)

char-woman, *s.* A woman hired to do odd jobs, or for a single day.

"Get three or four *charwomen* to attend you constantly in the kitchen, whom you pay only with the broken meat, a few coals, and all the cinders."—*Swift.*

çhar (1), *v.t.* [According to Skeat, simply a special use of *char* (2), v., but evidence is wanting.] To reduce to carbon by the application of heat; to burn slightly; to reduce to charcoal.

"A way of *charring* sea-coal, wherein it is, in about three hours or less, without pots or vessels, brought to charcoal."—*Bogle: Works*, ii. 141.

char-oven, *s.* A furnace for carbonizing turf.

çhär (2), **çhar,** *v.t.* & *i.* [Char (4), *s.*]

A. *Intransitive:*

1. *Ord. Lang.:* To work at odd jobs.

2. *Tech.:* To hew or dress stone.

B. *Trans.:* To do any work.

"That char *charred*."—*Old Proverb* in *Wright.*

***char** (3), *v.t.* & *i.* [A.S. *cerran*, *cyrran* = to turn; O. H. Ger. *chéran*, *chérran*; M. H. Ger. *keren*; O. Fris. *kéra*.] [Chare, *v.*]

1. *Trans.:* To turn, to cause to give away.

"He metis him thare, and *charris* him with ane chak."
Doug.: Virgil, 163, 5.

2. *Intrans.:* To turn aside.

"Lyke as ane bull dois rummesing and rare,
Quhen he escapis hurt out the altare,
And *charres* by the axe with his nek wycht
Gif ane the forbeds the dynt hittis not richt."
Doug.: Virgil, 46, 15.

chär'-a, *s.* [Gr. χαρά (*chara*) = delight.]

1. *Bot.:* The typical genus of the order Characeæ. The species are found in ponds and slow-running streams, and even in brackish water. The slender stem bears a number of whorls of leaves, the internodes growing smaller towards the top, which is crowned by a terminal bud. These internodes consist of enormous cells, sometimes enclosed by a layer of smaller cells (the cortex), and within the internodes the streaming of the protoplasm—erroneously called the circulation of the sap—may be easily seen with a low power of the microscope (1" objective). Several of the species are incrusted with lime. The axis is coated with tubes, and a large quantity of calcareous matter is deposited upon them. *Chara vulgaris*, Common or Stinking Chara or Stonewort, is very common in England, and a perennial, as also is *C. hispida*, the Prickly Stonewort.

çhar-a-bänc (*c* silent), *s.* [Fr.] A long, light pleasure van, with transverse seats.]

char-á'-çē-æ, *s. pl.* [Lat *char*(a), and fem. pl. suff. *-aceæ*.]

Bot.: A small group of aquatic cryptogams, by some considered to be aberrant Algæ, with two genera, Chara (q.v.) and Nitella (q.v.). The reproductive organs are situated at the nodes, and when the ciliated spermatozoids escape into the water, some of them find their way into the female organ through a small opening at the top. The fertilized ovum does not directly produce a new plant, but a string of cells, the oldest of which become the growing point of the young Chara.

2. *Paleobot.:* Fruits of Spirangium, supposed to be a gigantic Chara, occur from the Carboniferous to the Wealden, in which latter formation Chara also occurs, and it is found down to the Pleistocene.

† char-á'-çeous, *a.* [Mod. Lat. *chace*(æ), and Eng. suff. *-ous*.]

Bot.: Of or belonging to the Characeæ.

chä-rą-çi'-ni-dæ, *s. pl.* [Mod. Lat. *characinus* (q.v.); Lat. fem. pl. adj. suff. *-idæ*.]

Ichthy.: A family of physostomatous fishes, intermediate between the Cyprinidæ and the Salmonidæ. The air-bladder is divided into two portions. They inhabit tropical rivers.

chä-rą-çi'-nus, *s.* [From Gr. χάραξ (*charax*), genit. χαρακος (*charakos*) = a stake, a sea-fish, perhaps the rudd, and Lat. suff. *-inus*.]

Ichthy.: A genus of fishes, the typical one of the family Characinidæ (q.v.).

*** chär'-ăct, * chär'-ĕct, * car-act,** *s.* [O. Fr. *caracte*, a curtailed form of *character* (q.v.).]

1. A character, a sign or letter.

"Thorugh *caractes* that Crist wrooth."
Langland: P. Ploughman, 7,666.

2. A book, science, or learning.

"Rede his *caracte* in the wise
As she him taught." *Gower*, ii. 247.

"Even so may Angelo,
In all his dressings, *characts*, titles, forms,
Be an arch-villain."
Shakesp.: Meas. for Meas. v 1.

chär'-ąc-tẽr, * car-ac-tẽr, * car-ac-tur, *s.* [Lat. *character* = a sign or engraved mark: Gr. χαρακτήρ (*charaktēr*), from χαράσσω (*charassō*) = to engrave.]

". . . signed with the *character* of Christ in baptisme, . . ."—*Brinkert: Civil Life*, p. 178.

***2.** A representation or description of any one as to his personal qualities.

"Each drew fair *characters*, yet none
Of these they feigned excels their own."
Denham: On Mr. Abraham Cowley 97.

3. An unfavourable description or account of the natural qualities of a thing or place.

"This subterraneous passage is much mended, since Seneca gave so bad a *character* of it."—*Addison: On Italy.*

4. A distinguishing mark, feature, or trait of anything; a characteristic.

"The truest *characters* of Ignorance
Are Vanity, and Pride, and Arrogance."
Butler: Remains.

5. The personal qualities or attributes of a person; the moral and mental constitution.

"Most women have no *characters* at all."
Pope: Moral Essays, ii. 2.

"Versed in the *characters* of men; and bound,
By tie of daily interest, to maintain
Conciliatory manners and smooth speech."
Wordsworth: Excursion, bk. viii

"He was a man of parts and courage; but his moral *character* did not stand high."—*Macaulay: Hist. Eng.*, ch. v.

6. The quality or nature of anything.

"The method of experiment here pursued, though not of the simplest *character*, is still within your grasp."—*Tyndall: Frag. of Science* (3rd ed.), viii. 14, p. 208.

7. A position, rank, post, or capacity.

"They were sure of a market for such a slave as Joseph, and in that degraded and miserable *character* he arrived in Egypt."—*Milman: Hist. of Jews* (3rd ed.), bk. ii., vol. i., p. 50.

8. A person or actor in a story, play, &c.; a personage.

"Mr Booth satisfies those spectators people who having seen a *character* . . . at all acceptable performed in a certain manner, are intolerant of any attempt to diversify it and are sensitively jealous of modern thought."—*Daily Telegraph*, May 4, 1881.

9. A person noted for any eminent quality.

10. A person noted for any peculiarity of manner, habits, or disposition. (*Colloquial.*)

"He's a *character*, and I'll humour him."—*Goldsmith: She Stoops*, ii. 1.

11. A part appropriated to anyone in a play.

"Those who have followed Mr Booth through his various and varied *characters* know what a good actor he is and how earnest a student."—*Daily Telegraph*, May 4, 1881.

12. An estimate of the personal qualities of a person; reputation, fame, report.

13. A certificate as to behaviour, competency, &c., given by a master to a servant when leaving him.

"Lady Spratt . . . had taken a discharged servant of Mrs Leslie's without applying for the *character*."—*Lytton: My Novel*, bk. viii., ch. v.

¶ *In character:* Appropriate, in keeping with other things.

"Read it: is it not quite *in character*."—*Disraeli: Vivian Grey*, bk. ii., ch. v.

Out of character: Inappropriate, incongruous.

B. *Technically:*

1. *Law:* Witnesses to the character of a prisoner may be called, but they must not go into details. When there has been a previous conviction, it may be proved after the prisoner is found guilty.

2. *Nat. Science:* A short definition expressing the essential marks by which an animal or a plant, or a numeral is distinguished from the others which most nearly resemble it.

3. *Music:* A general name for the signs employed in music, such as brace, bind, bar, sharp, flat, natural, clef, stave, shake, &c.

4. *Roman Theol.:* The change wrought in the recipient of the Sacrament of Baptism or Holy Orders.

¶ (1) Crabb thus distinguishes between *character* and *letter*: "*Character* is to *letter* as the genus to the species: every *letter* is a *character*; but every *character* is not a *letter*. *Character* is any printed mark that serves to designate something; a *letter* is a species of *character* which is the constituted part of a word. Short-hand and hieroglyphics consist of *characters*, but not of letters. *Character* is employed figuratively, but *letter* is not. A grateful person has the favours which are conferred upon him written in indelible *characters* upon his heart."

(2) He thus discriminates between *character* and *reputation*:—"*Character* lies in the man, it is the mark of what he is; it shows itself upon all occasions: *reputation* depends upon others; it is what they think of him. A *character* is given particularly: a *reputation* is formed generally. Individuals give a *character* of another from personal knowledge: public opinion constitute the *reputation*. *Character* has always some foundation; it is a positive description of something: *reputation* has more of conjecture in it; its source is hearsay. It is possible for a man to have a fair *reputation* who has not in reality a good *character*; although men of really good *character* are not likely to have a bad *reputation*." (*Crabb: Eng. Synon.*)

chär'-ąc-tẽr, † **cha-rac'-tẽr,** *v.t.* [Character, *s.*]

char-cōal, * char-cole, * char-coll, char kole, *s.* & *a.* [Eng. *char*, *v.*, and *coal* = that which is turned to coal or carbon.]

A. *As substantive:*

I. *Ord. Lang.:* The same as II. 1.

II. *Technically:*

1. An impure variety of carbon, prepared from vegetable substances or bones.

(1) *Wood charcoal* consists of wood burned with but little access of air. Billets of wood are built into a heap, which is covered with earth or sand. The heap is fired at openings left near the bottom of the pile, and the gases escape at small openings above. For making fine charcoal, such as that of willow, used in the manufacture of gunpowder, the wood is burned in iron cylinders, or rather retorts, in which a process of destructive distillation removes the volatile hydrocarbons, pyroligneous acid, &c. By this more perfect means the process is accurately regulated. Charcoal is used in the arts as—a fuel; a polishing powder; a table on which pieces of metal are secured in position to be soldered by the blowpipe; a filtering material; a deflector and decolorizer of solutions and water; an absorbent of gases and aqueous vapours; a non-conducting packing in ice-houses, safes, and refrigerators; an ingredient in gunpowder and fire-works; in the galvanic battery and the electric light.

(2) *Animal charcoal:* Used largely in sugar-refining, and as a disinfectant and filtering medium, is prepared by calcining bones in closed vessels. These are either retorts, similar to those in which coal is distilled for the production of illuminating gas, or they are earthenware pots piled up in kilns and fired. Charges of fifty pounds of bones to a pot will require, say, sixteen hours of firing. The bones are then ground between fluted rollers, the dust removed, and the granulated material used for charging the filters of the sugar-refiner. The material is used for removing colour, feculencies, and fermenting ingredients from the syrup. [BONE-BLACK FURNACE.] (*Knight.*)

"*Charcole* or *charkole*. P. l. *Carbo*."—*Prompt. Parv.*

"Seacoal lasts longer than *charcoal*; and *charcoal* of roots, being coaled into great pieces, lasts longer than ordinary *charcoal*."—*Bacon: Natural History*

2. A name for the finest tin-plates, so called from being manufactured with charcoal fires.

B. *As adjective:* (See the compounds).

charcoal-blacks, *s. pl.* Various black pigments essentially composed of charcoal, the latter formed by burning ivory, bones, vine twigs, &c.

"Charm by accepting, by submitting sway."
Pope: Epistle, ii. 205.

¶ Crabb thus distinguishes between *to charm, to enchant, to fascinate, to enrapture*, and *to enchant*: "To *charm* expresses a less powerful effect than to *enchant*. A *charm* is simply a magical verse used by magicians and sorcerers: *incantation* or *enchantment* is the use not only of verses but of any mysterious ceremonies, to produce a given effect. To *charm* and *enchant* in this sense denote an operation by means of words or motions; to *fascinate* denotes an operation by means of the eyes or tongue. . . . *Charms* and *enchantments* are performed by persons; *fascinations* are performed by animals; the former have always more supposed good in view; the latter have always a mischievous tendency. . . . To *charm, enchant*, and *fascinate*, are taken in the improper sense to denote moral as well as natural operations; *enrapture* and *captivate* have a moral application only. . . . When applied to the same objects *charm, enchant*, and *enrapture* rise in sense. (*Crabb: Eng. Synon.*)

"*Chartism* means the bitter discontent grown fierce and mad."—*Carlyle: Chartism*, ch. 1.

chart'-ist, *s.* [Eng. *chart* = charter: suff. *-ist.*] A name given to a political party in this country, whose views were embodied in a document called the *People's Charter*. The chief points were—universal suffrage, vote by ballot, annual parliaments, payment of members, equal electoral divisions, and the abolition of property qualification for members. These principles were set out in a bill prepared in 1838. The party became divided in the following year, the extreme members advocating the employment of force for the attainment of their object. These were known as Physical Force Chartists. They perpetrated great outrages at Birmingham on 15th July, 1839, and at Newport in Monmouth, on 4th November of the same year. Inspired by the proclamation of a republic in France early in 1848, they agreed to assemble on 10th April of that year to the number of 200,000 men, and march in procession to Parliament, to present a petition alleged to be signed by six millions of persons. Under the direction of the first Duke of Wellington, the Bank of England, the Post Office, and other public buildings were in consequence temporarily fortified whilst troops supported by artillery held the bridges. About 200,000 civilians were sworn in as special constables, among them being Louis Napoleon, afterwards the Emperor Napoleon III. The petition was permitted to be delivered, and was found to have only two millions of signatures, many of them forged. The procession was forbidden, its suppression being facilitated by the suggestive fact that only about 20,000 had actually put in an appearance at the place of rendezvous. The rise of the Chartists was in large measure produced by the distress consequent on the existence of protection, and when free trade was established, with the effect of raising wages and cheapening food, the movement died away. Now one never hears of a Chartist, but it is worth noting that some points of the Charter, and notably household suffrage and vote by ballot, have been accepted by the legislature, and are the law of the land.

". . . Heming, the learned sub-prior of that monastery, who compiled a *chartulary* of its possessions and privileges."—*Warton Hist. of Academy*, ch. p. 28.

chär'-y, *** char-igh,** *a.* [A.S. *cearig* = full of care, sad, from *cearu*, *caru* = care.] [CARE.]

*** 1.** Full of sorrow or trouble; sad.

"Turtle leadeth *cherigh* hir . . .
Ormulum, 1,574.

2. Wary, cautious, frugal; careful

"The *chariest* maid is prodigal enough.
If she unmask her beauty to the moon."
Shakesp.: Hamlet, i. 3.

*** chās,** *s.* [CHESS.] (*Scotch.*)

chā'-ṣ-ble, * chāṣe'-ṣ-ble, *a.* [Eng. *chas(e)*; *-able.*] Capable of or fit for being chased or hunted.

"Beasts which ben *chaceable*." *Gower*, ii. 169.

chas-bol, * chas-bol, * ches-bowe, * chas-bolle, *s.* [See CHEESE-BOWL, said to be from the shape of the capsule, but evidence is wanting.] A poppy.

"Ad Tarquine gef nay answer to the messangyr, but nake his staf, and syne past thrucht his gardin, and quhar that he sat ouy *chasbollis* that grew hie, he straik the heidis fra them vithi his staf, and did no thyng to the lytil *chasbollis*." —*Compl. Scotland*, p. 146.

chāse (1), * **chaçen, * chasen, * chaci,** *v.t.* & i. [Fr. *chasser*; O. Fr. *cacier, chacier, cachier*; Sp. *cazar*; Port. *caçar*; Ital. *cacciare, cacciare, capto* = to take, to catch. *Chase* is thus essentially the same word as *catch* (q.v.).]

A. *Transitive:*

I. *Ordinary Language:*

1. To pursue with a view to catching; to hunt.

"Tristrem on huntinge . . . An *aert chaci* bigan." *Tristrem*, iii. 41.

2. To drive away; to pursue after an enemy.

"The Comayns *chaced* him out of the contree." *Maundeville*, p. 87

*3. To put in to flight.

" . . . the sound of a shaken leaf shall *chase* them; and they shall flee, as fleeing from a sword . . ." —*Lev.* xxvi. 36

4. To follow fast after; to succeed.

"To the pale-green sea-groves straight and high *Chasing* each other merrily." *Tennyson: Merman*, 2.

* **II.** *Figuratively:*

1. To follow up or pursue a subject.

"Schortly this matiere forth to *chace*." *Chaucer: C. T.*, 9,217.

*2. To follow after a thing as desirable; to strive after

3. To cause to depart or move forward; to drive

Thus *chased* by their brother's endless malice from prince to prince, and from place to place . . ." —*Knolles History of the Turks.*

B. *Intransitive:*

*1. To hunt, to pursue with a view to catching.

"I *chase* with my houndis that he huntyng." *Reliquiæ Antiquæ* i. 192.

*2. To hurry, to hasten.

"To a justes in Jerusalem He *chaced* awey faste" *Langland: P. Plowman*, 11,672.

*3. To pursue, as after an enemy.

"'Horse! horse!' the Douglas cried, 'and *chase!*'" *Scott: Marmion*, vi. 15.

chāse (2), *v.t.* [A contracted form of *enchase* (q.v.).] To enrich or beautify metals by ornamenting them with figures or patterns in bas-relief; to emboss.

chāse (1), * **chāçe, * chās,** *s.* & *a.* [Fr. *chasse*; O. Fr. *chace*; Sp. & Port. *caza*; Ital. *caccia.*]

A. *As substantive:*

I. *Ordinary Language:*

1. *Literally:*

(1) The act or custom of hunting wild animals.

"To make his hunting and his *chace*"—*Gower*, i. 83.

"The unwonted *chase* each hour employs,
Yet scarce he not the hunter's joys"
Byron: The Giaour.

(2) The act of pursuing after an enemy; pursuit.

"The *chas* is left for thilke day"
Gower, i. 248

* (3) That which is hunted or pursued; the object of pursuit.

"Ich Nay Wa sekh, single out some other *chase*;
For I myself will hunt this wolf to death"
Shakesp.: 3 *Henry VI.*, ii. 4

(4) Fitness for hunting.

"Frequent the forests thy chaste will obey.
And for *chase* make the beast a of *chase* thy prey"
Dryden: Solomon & Arcite, iii. 246.

2. *Figurative:*

*(1) The act of pursuing eagerly after anything; an earnest effort after or pursuit of.

"Yet the final *chase* of fame, by few pursued,
Has drawn destruction on the multitude"
Dryden: Juvenal

* (2) That which is eagerly sought after.

II. *Technically:*

1. An open hunting-ground or preserve for game, which is private property. It differs from a park in not being enclosed and in being of greater extent, and from a forest in being of less extent and endowed with fewer liberties. Every forest is a chase, but every chase is not a forest.

"The more for his net, and the land for his game,
The *chase* for the wild, and the park for the tame."
Scott: Rokeby, iii. 20.

*2. A term at tennis, signifying the spot where a ball falls, beyond which a player has to drive his ball to gain a point or chase.

"T. I have two *chases*.—I. Sir, the last is no *chase*, but a loss.—T. Sir, how is it a loss?—I. Because you did strike it at the second bound."—*Wentworth Francis and English Grammar*, p. 234 (1624).

B. *As adj.:* (See the compounds).

chase-gun, *s.*

Ord.: A gun mounted at the bow to fire at a vessel being chased. It is fired from a chase-port.

chase-port, *s.*

Naut.: A port-hole at the bow of a vessel, from which the *chase-guns* are fired.

çhāse (2), *s.* [A variant of *case* (q.v.).]

1. *Printing:* A rectangular iron frame which receives the matter from a galley, and in which it is arranged in columns or pages, and locked up in order for printing. Rules (if necessary) and furniture for spacing the pages are placed between the pages, and all locked firmly in the chase by wedges called quoins. The furniture consists of slips of wood or metal, half an inch in thickness, and of any required length. Those at the head, foot, and side are called head-sticks, foot-sticks, side-sticks. Those between the pages are called gutters. Gutenberg used screws to lock up his form in the chase. Quoins came later.

2. *Ordnance:* The portion of a gun forward of the trunnions to the swell of the muzzle. In modern guns, the swell is suppressed, and the chase extends to the muzzle.

3. *Masonry:* A groove cut in the face of a wall.

4. *Shipbuilding:* A kind of joint by which an overlap-joint gradually becomes a flush-joint, as at the hooding-end of clinker-built boats. A gradually deepening rabbet is taken out of each edge at the lands, so that the projection of each strake beyond the next below it gradually diminishes, and they fit flush with each other into the rabbets of the stem and stern post.

5. *Engin., &c.:* A groove, trench, or passage of a given width and depth to fit an object which traverses or fits therein: as,—

(1) The chase or curved water-way, or breast in which a breast-wheel or scoop-wheel rotates. The sides of the chase fit as nearly as possible to the wheel, to prevent waste of water.

(2) The trench made by spades or machines for the reception of drain-tile. (*Knight.*)

chase-mortice, *s.*

Carp.: A method of fixing the ends of a transverse piece of wood into two holes or mortices in two joists, beams or other timber unyieldingly fixed in position. One end of the transverse piece being mortised into the one fixed timber, the other end is partly rotated around this as a centre till it be fitted into a long groove cut for it in the other beam. This is the method by which ceilings are mortised into bridging joists.

çhāsed (1), * **çhāçed,** *pa. par.* or *a.* [CHASE (1), *v.*]

çhāsed (2), *pa. par.* or *a.* [CHASE (2), *v.*]

chās'-ēr (1), *s.* [*Chase* (1), *v.*; *-er.*]

1. *Ordinary Language:*

(1) One who chases, hunts, or pursues.

"A stranger to respect or fear,
In peace a *chaser* of the deer"
Scott: The Lady of the Lake, vi. 4.

(2) A horse trained specially for hunting or steeple-chasing. [STEEPLE-CHASER.]

"They will certainly have to do more at this meeting than the *chasers*"—*Daily News*, Dec 7th, 1880

2. *Naut.:* A gun at the bow or stern of a ship, used for firing when in chase.

çhās'-ēr (2), *s.* [CHASE (2), *v.*]

I. *Ord. Lang.:* One who practises the art of chasing.

II. *Technically:*

1. *Mech.:* A tool for cutting threads in the hand-lathe; sometimes called a comb, from its having a row of projecting teeth. It is made of steel, and the teeth filed by hand or by a cutting hub. It is first forged in blank. The teeth are then filed or made by a hub (q.v.). The latter is a steel mandril rotated on the centres of a lathe and having a section of screw-thread cut upon it. The thread is notched in places, so as to make cutting edges. Chasing by the graver may be merely engraving in lines, but is usually in the form of relief; parts of the metal being cut away, leaving protuberant portions of ornate form, and which are further beautified by graver-lines, frosting, milling, &c. The sand-bag supports the work while being chased by the graver. (*Knight.*)

2. *Metal.:* One of the edge-wheels which revolves in a trough, to grind substances to powder. [CHILIAN MILL; MORTAR-MILL; OIL-MILL.] Also used in grinding ore for puddling-furnaces, &c. (*Knight.*)

çhās'-ēr (3), *s.* [Perhaps from *chase* (1), *v.*] A ram that has only one testicle. (*Scotch.*)

"I jinkit into Geordie Allan's, at the West Port, where I had often been afore, when selling my auld ewes and *chasers*."—*Brownie of Bodsbeck*, ii. 26.

* **çhāṣ'-i-ble,** *s.* [CHANCEABLE.]

çhās'-ing (1), *pr. par., a., & s.* [CHASE (1), *v.*]

A. & **B.** *As pr. par. & particip. adj.:* In senses corresponding to those of the verb.

C. *As subst.:* The act of hunting or pursuing; chase.

çhās'-ing (2), *pr. par., a., & s.* [CHASE (2), *v.*]

A. *As pr. par.:* (See the verb).

B. *As adj.:* Of or pertaining to the art of a chaser. (See the compounds below.)

C. *As substantive:*

1. The act or art of a chaser.

"The art of *chasing* was much practiced among the Greeks."—*Knight*

2. The pattern chased on any metal.

"You would not suppose that he referred to the dial-plate in front and the *chasing* of the case behind"—*Tyndall. Frag. of Science* (3rd ed.), v. 100.

chasing-chisel, *s.* A punch used in enchasing. The mallet by which it is driven is the chasing-hammer, and the operation is performed on a stake. [CHASER.] (*Knight.*)

chasing-hammer, *s.* The mallet of the chaser in the operation of enchasing by embossing by punches. (*Knight.*)

chasing-lathe, *s.* A screw-cutting lathe. So called from the name of the tool wherewith screws were cut by hand in the old form of lathe, before the slide-rest and feed-screw were invented. (*Knight.*)

chasing-tools, *s. pl.* Those used by the chaser in the operation of embossing by punches. The work is laid on a chasing stake or cushion, and the punch struck by hammer or mallet. The chasing-tools are of various kinds, with flat, rounded faces and curved edges, so as to follow a pattern. Other tools have faces ornamented with designs in cameo or intaglio, which are conferred upon the metal by the action of the punch and hammer. (*Knight.*)

chāsm, *s.* [Lat. *chasma*, from Gr. χάσμα (*chasma*) = a gulf, from χαίνω (*chainō*) = to gape.] [CHASMA.]

I. *Lit.:* A deep opening in the earth; an abyss, a yawning gulf.

"Round his gray head the wild curlew
In misty a fearless circle flew
O'er *chasms* he passed"
Scott: The Lord of the Isles, v. 6.

2. *Fig.:* A gap, a void, an empty space.

(*a*) *In material things:*

"Great numbers of recruits were sent to fill the *chasms* which pestilence had made in the English ranks"—*Macaulay: Hist. Eng.*, ch. xv.

(*b*) *In immaterial things:*

"Such, whose supine felicity but makes
In story *chasms*, in epochas mistakes."
Dryden: Astræa Redux, 196.

☞ For the distinction between *chasm, breach, break*, and *gap*, see BREACH.

chāṣ'-ma, *s.* [The same as *chasm* (q.v.). Trench says it was long in the language before it became anglicised as *chasm.*] A chasm

"Observe how handsomely and naturally that hideous and unprofitable *chasma* betwixt the predictions in the eleventh chapter of Daniel and the twelfth is in this way filled up"—*More: Mystery of Iniquity*, bk. 2, ch. 10, § 8.

chās'-mō, *s.* [Gr. χάσμα (*chasma*) = a gaping.]

Entom.: A genus of beetles of the family Scarabæidæ.

* **chāṣmed (med** as **md),** *a.* [Eng. *chasm*; *-ed.*] Full of chasms or gaps

"Fast by you chasmed hill that frowns.
Cleft by an elemental shock."
Essays by a Society of Gentlemen at Exeter (1796), p. 142.

chăş-mŏ'-dēş, *s.* [Gr. χασμώδης (*chasmódēs*) = yawning, given to yawning; χαίνω (*chaínō*) = to yawn.]

Ichthy.: A genus of fishes belonging to the family Blenniidæ. They resemble the Blenny, but have the head crested and more prolonged, the dorsal fin the whole length of the body, and united to the caudal. (*Craig.*)

chăş-mŏ'-dī-ę, *s.* [Gr χασμώδης (*chasmódēs*) = gaping, yawning.]

Entom.: A genus of coleopterous insects, belonging to the section Lamellicornes, and the sub-section Xylophili. Swainson ranks them with his Rutiline or Metallic beetles. *Chasmodia viridis* is about an inch long, and of a deep blue-green, with the basal joints of the antennæ pitchy red, and the club black. It is found in Brazil.

chăs'-mŏp-tĕr-ĭn, *s.* [Gr. χάσμα (*chasma*) = gap, πτερόν (*pteron*) = a wing.]

Entom.: A genus of beetles belonging to the family Scarabæidæ.

chăsm'-ȳ, *a.* [Eng. *chasm*; *-y.*] Full of chasms. (*Carlyle.*)

* **chass (1),** *s.* [Chess.]

* **chass (2),** *s.* [Case.] Case, condition.

chasse-las (pron. **shas-la**), *s.* [French.] A sort of grape.

chass'e-pōt (*t* silent), *s.* [French; from the name of the inventor.] The breech-loading centre-fire needle gun of the French service. It was designed as an improvement on the Prussian needle-gun, to which it was opposed in the Franco-Prussian war of 1871. A paper cartridge is employed in the gun as originally constructed in 1867, but in 1869 M. Chassepot patented an improved arrangement, embracing a cartridge-retractor for use with a central-fire metallic cartridge; the construction of the gun is, however, essentially the same. (*Knight.*)

chasse'-eŭr, *s.* [Fr. = a hunter, from *chasser* = to hunt.]

* **1.** A hunter or huntsman

"The daring *Chasseur* lost two of his best horses soon after, and never perfectly recovered . . ."—*Scott: The Chase.*

2. One of a select body of infantry in the French service, designed for particularly light and rapid movements.

3. An attendant upon persons of rank and wealth, wearing a kind of military uniform, and acting as a footman.

chas'-sis (**is** as **ĭ**), *s.* [Fr. = a frame, a sash, a lattice.]

Ordnance: The base frame on which a barbette or casemate gun is run in and out of battery. The chassis is capable of a certain amount of lateral sweep, called traverse, so as to adjust the gun horizontally in pointing. This is often done by oscillating in an arc, a pintle in front of the chassis being the centre of oscillation. [Gun-carriage.] (*Knight.*)

chāste, * **chāst,** *a.* [O. Fr. *chaste, caste*; Sp., Port., & Ital. *casto*, from Lat. *castus*, fem. *casta* = chaste.]

I. *Of persons* (*made of life, &c.*):

1. Pure from all unlawful sexual intercourse; virtuous.

"When, as *chaste* Dian, here thou deign'st to rove"
Byron: Hours of Idleness: Nisus and Euryalus.

2. True to the marriage-bed.

"To lede *chast* lyf and clene"
Life of Beket, 154

II. *Of language*:

1. Pure, free from obscenity.

"Among words which signify the same principal ideas, some are clean and decent, others unclean; some *chaste*, others obscene."—*Watts: Logick.*

2. Free from any mixture of barbarous phrases; pure, uncorrupt; unaffected.

". . . that great model of *chaste*, lofty, and pathetic eloquence, the Book of Common Prayer"—*Macaulay Hist. Eng.*, ch. x.

¶ The word was formerly used in reference to men as well as women, but is now chiefly restricted to the latter.

¶ *Chaste brethren and sisters*:

Ch. Hist.: An appellation given to themselves by the members of a sect which flourished in the 12th century, and was more generally known by the name of *Apostolici* (q.v.).

chaste-eyed, *a.* Free from unchaste or lascivious looks.

"The oak-crown'd sisters, and their *chaste-eyed* queen."
Collins: Ode on the Passions.

chaste-tree, *s.*

Bot.: The same as *Agnus Castus* (q.v.).

* **chāste,** * **chāst,** * **chāstie,** * **chāsty,** *v.t.* [O. Fr. *castier, chastier*; Sp. & Port. *castigar*; Ital. *castigare*; Lat. *castigo*, from *castus* = chaste, pure, and *ago* = to make.] [Chasten.]

1. To make or keep chaste.

"Odyr wymmen by her to *chaste*."
Orfeo, 238.

2. To chastise, to punish, to correct.

"Harlottes with his hendelayk he hoped to *chast*"
Allit. Poems (ed. Morris); *Cleanness*, 960.

* **chās'-tĕd,** *pa. par.* or *a.* [Chast, *v.*]

"'Ah, *chasted* bed of mine,' said she."
Sidney: Arcadia, bk. ii., p. 169.

* **chas-tein,** * **chas-teyn,** *s.* [Chestnut.]

* **chāste'-lĭng,** *s.* [Dimin. from *chaste.*] A eunuch.

"It [Mat. xix.] entreateth of three kinds of *chastelings*"—*Becon: Contents of Matthew's Gospel.* (*Trench: On some def. in our Eng. Dict.* p. 30.)

chāste'-lȳ, * **chāst'-lȳ,** * **chast-liche,** *adv.* [Eng. *chaste*; *-ly.*]

1. In a chaste manner; virtuously, purely.

"He sael him loki *chastliche*"
Ayenbite, p. 228.

"You should not pass here; no, though it were as virtuous to lie as to live *chastely*."—*Shakesp.: Coriolanus*, v. 3.

2. Without violation of decent ceremony.

"Howsoe'er my cause goes, see my body
(Upon my knees I ask it) buried *chastely*."
Beaumont and Fletcher: Knight of Malta.

chās'-tęn (*t* silent), * **chas-tien,** *v.t.* [O. Fr. *castier, chastier*; Sp. & Port. *castigar*; Ital. *castigare*; Lat. *castigo* = to make chaste or pure, from *castus* = pure, and *ago* = to make.] [Chaste, Chastise.]

1. To correct with corporal punishment.

"*Chasten* thy son while there is hope, and let not thy soul spare for his crying."—*Proverbs*, xix. 18.

2. To correct, subdue, or mortify the mind or heart.

"But observation tends to *chasten* the emotions and to check those structural efforts of the intellect which have emotion for their base."—*Tyndall: Frag. of Science* (3rd ed.), ii. 31.

3. To make pure or free from faults; to purify, to expurgate.

¶ Crabb thus distinguishes between to *chasten* and to *chastise*:—"*Chasten* has most regard to the end, *chastise* to the means; the former is an act of the Deity, the latter a human action. God *chastens* his faithful people to cleanse them from their transgressions, parents *chastise* their children to prevent the repetition of faults." (*Crabb: Eng. Synon.*)

chās'-tęned (*t* silent), *pa. par.* or *a.* [Chasten, *v.*]

1. *Lit.*: Punished, chastised, corrected.

2. *Fig.*: Softened down, subdued; formed or made according to the very strictest rules.

"It was a face that in prosperity would have been rich and sparkling as a jewel, and in adversity preserved its charms from the rare and *chastened* beauty in which it was modelled."—*G. J. White Melville: The Gladiators*, ch. vii.

chāst'-ęn-ĕr (*t* silent), *s.* [Eng. *chasten*; *-er.*] One who chastens, corrects, or punishes.

"And be alone on earth, as I am now.
Before the *Chastener* humbly let me bow."
Byron: Childe Harold, ii. 98.

1. *Of life, manners, &c.*:

"Stand not upon thy strength, though it surpass;
Nor thy fore proved *chastness* stand thou on.
Sir J. Davies: Writ's Pilgrimage, q. 3.

2. *Of language*:

"He [Sacheverel] wrote without either *chasteness* of style or liveliness of expression."—*Bishop Burnet: History of his own Time.*

chāst'-ęn-ĭng (*t* silent), * **chāste-nynge,** *pr. par., a., & s.* [Chasten, *v.*]

A. & B. *As pr. par. & particip. adj.*: (In senses corresponding to those of the verb).

"Some feel the rod,
And own, like us, the father's *chastening* hand."

C. *As subst.*: The act of chastising, correcting, or punishing; chastisement, correction, humiliation.

"Behulde happie is the man whom God punisheth therefore despise not thou the *chastenynge* of the Almighty."—*Job*, v. 155. (*Rich.*)

* **chast-hed,** *s.* [Mid. Eng. *chast* = chaste, and = hood.] A state of chastity; chasteness, virtue.

"For to don him *chasthed* forgeten."
Story of Gen. and Exod., 1.

* **chas-tie,** * **chas-tien,** * **chas-ty,** *v.t.* [Chast.]

* **chās'-tie-mĕnt,** *s.* [Mid. Eng. *chaste* = chastise; suff. *-ment.*] Chastisement, correction.

"Thurh owuch *chastiement*."—*Ancren Riole*, p. 72.

chās'-tĭ-fȳ, *v.t.* [Lat. *castifico* = to make chaste or pure: *castus* = chaste; *facio* (pass. *fio*) = to make.] To make chaste; and *fig.*, to emasculate.

"He says their he sum quhis hes *chastifyit* thame selvis for the kingdome of heuyen, quhairfor he declaris that they astrict thame selvis to perpetuall continencie and chastitie."—*Knox: Hist. Reform.*, p. 85.

* **chāst'-ĭng,** * **chast-ynge,** *pr. par.* or *a.* [Chast, *v.*]

"Til children cherisynge Be *chastynge* with pein."
Langland: P. Plowman, 3,110.

chās-tĭş'-ą ble, *a.* [Eng. *chastise*; *-able.*] Capable or deserving of being chastised.

chās-tĭşe', * **chas-ty-zyn,** * **chas-ty-se,** *v.t.* [An extension of Mid. Eng. *chaste*, by addition of suff. *-isen*, *-ise*, *-ize.*] [Chasten.]

I. *Literally*:

1. To correct with corporal punishment.

2. To correct, subdue, or mortify the mind, heart, or feelings.

"Ten years are spent, since first he undertook
This cause of Rome, and *chastised* with arms
Our enemies' pride . . ."
Shakesp.: Titus Andronicus, i. 1.

3. To reduce to order or obedience; to repress, to awe, to punish

"Then with surprise, surprise *chastised* by fears
How art thou chang'd"
Pope: Homer's Odyssey, bk. xvi., l. 186.

". . . the courts of justice were not straitened with whatever might be their temper, to *chastise* all aggressions . . ."—*Hallam: Constitutional Hist. of England*, ch. i.

* **II.** *Fig.*: To abridge.

"Both these rooms were *chastised* of their heights towards the west. . . ."—*Crawford: Univ. Babylon*, ii. 4.

¶ For the difference between to *chasten* and to *chastise* see Chasten.

chās-tĭşed, *pa. par.* & *a.* [Chastise, *v.*]

chās'-tĭşe-mĕnt, *s.* [Eng. *chastise*; *-ment.*]

1. The act of chastising or correcting.

". . . for I speak not with your children which have not known, and which have not seen the chastisement of the Lord your God, . . ." *Deut.* xi. 2.

2. Correction, punishment, discipline.

"And for this, oh King! 'tis sent
On thee a double *chastisement*."
Byron: Siege and Conquest of Alhama.

chās-tĭ-şēr, *s.* [Eng. *chastise*; *-er.*] One who chastises, corrects, or punishes.

"They have grown in strength and by their strength now begin to despise their *chastisers*."—*Sir E. Sandys: State of Religion.*

chās'-tĭ-tȳ, * **chastete,** * **chastita,** * **chastetee,** * **chastytc,** *s.* [O. Fr. *chasteit*; Sp. *castidad*; Ital. *castità*; from Lat. *castitas* = chastity, from *castus* = pure, clean.]

1. Purity of body and mind; freed in from unlawful sexual intercourse.

"*Chastyte. Castitas, pudicitia.*"—*Prompt. Parv.*

"'Tis *chastity*, my brother, *chastity*:
She that has that is clad in complete steel."
Milton: Comus.

2. Celibacy.

"As wisly as I schal for evermore
Enforce my might thi trouthe to kepe and
And holde werre alday with *chastite*."
Chaucer: The Knightes Tale, l. 2304.

3. Freedom from obscenity.

"There is not *chastity* enough in language
Without offence to utter them."
Shakesp.: Much Ado, iv. 1.

4. Purity; freedom from any intermixture of barbarous or affected expressions.

¶ Crabb thus distinguishes between *chastity* and *continence*:—"These two terms are equally employed in relation to the pleasures of sense: both are virtues, but sufficiently distinct in their characteristics. *Chastity* prescribes rules for the indulgence of these pleasures; *continence* altogether interdicts their use. *Chastity* extends its views to whatever may bear the smallest relation to the object which it proposes to regulate: it controls the thoughts, words, looks, attitudes, food, dress, company, and in short the whole mode of living: *continence* simply confines itself to the privation of the pleasures themselves: it is possible, therefore, to be *chaste* without being *continent*, and *continent* without being *chaste*. *Chastity* is suited to all times, ages, and conditions; *continence* belongs only to a state of celibacy." (*Crabb: Eng. Synon.*)

cheap, **†chep**, **†chepe**, **†cheep**, a., n., & adv. [A.S. *ceap* = price, *ceapian* = to cheapen, to buy; Dut. *koop* = a bargain; Icel. *kaup* = a bargain, *kaupa* = to buy; Sw. *köp* = a bargain, *köpa* = to buy; Dan. *kiöb*, *kiöbe*; Goth *kaupon* = to traffic; O. H. Ger. *confon*; M. H. Ger *koufen*; Ger. *kaufen* = to buy, *kauf* = a purchase. The word was originally a substantive, and was never used as an adjective in the earlier periods. (*Skeat.*)]

A. *As substantive:*

†1. A price, value.

"Hire **cheap** was the wyne."
Lapamon, i. 17.

"*Cheap. Pretium.*"—*Prompt. Parv.*

†2. A market. In this sense the word survives in many local names, as *Eastcheap*, *Cheapside*.

☞ It is generally found in the compound phrases—*Good cheap* (an imitation of the French *bon marché*) = great plenty, very cheap; *better cheap*, *great cheap*, *dirt cheap* (and earlier), *dog-cheap*, all signifying exceedingly cheap, at a very low price.

"Triolorinus maketh the corn *good cheape* or *dere*."
—*Gower*, ii. 163.

"To *great cheap* is holden al litel pris."
Chaucer: *C. T.*, 6,104.

check, **†checke**, v.t. & i. [Check, s.]

A. *Transitive:*

I. *Ordinary Language:*

1. To put a sudden restraint on; to cause to stop

"A secret horror *checked* the feast,
And chilled the soul of every guest."
Scott: *Lay of Last Minstrel*, vi. 24.

2. To restrain, so as to allow to move or progress less rapidly.

"Such a tax, it was hoped, would *check* the growth of a city which had long been regarded with jealousy and aversion by the rural aristocracy."—*Macaulay*: *Hist. Eng.*, ch. iv.

3. To repress, to curb, to restrain.

"... the means of *checking* the abuses which disgraced every department of the government."—*Macaulay*: *Hist. Eng.*, ch. xi.

4. To reprove, to chide.

"A poet, in his evening walk,
O'erheard and *check'd* this idle talk."

5. To go through and place marks against names or items in a list, account, &c.

6. To ascertain or ensure the correctness or authenticity of anything by comparing it with others.

". . . but we have county means of checking and controlling it with other accounts."—*Lingard: Cred. Early Roman Hist.* (1858), ch. xiii., pt. i., § 2, Vol. ii. p. 260.

II. *Technically:*

†**1.** *Chess:* To make a move by which any one of the adversary's pieces is put in check.

"Remove, confine, check, leave, or take
Pieces, Queens, undo or make,
Pawn, Rook, Knight, Queen, or King."
Printer's Int.

2. *Bookkeeping, &c.:* To compare with an original or count, &c., in order to secure accuracy and correctness.

3. *Nautical:*

(1) *To check a brace:* To slacken or ease off a brace which is found to be too stiffly extended, or when the wind is drawing aft.

(2) *To check a cable:* To stopper it.

(3) *To check a bowline:* To slacken it when the wind becomes large or free.

B. *Intransitive:*

I. *Ordinary Language:*

*1. To make a stop or pause (followed by *at*).

"The mind, once jaded by an attempt above its power, either is disabled for the future, or else *checks at* any vigorous undertaking ever after."—*Locke.*

*2. To clash, to interfere.

"If love *check* with business, it troubleth men's fortunes."—*Bacon.*

*3. To cause a feeling of restraint or repression; to act as a restraint.

"I'll avoid his presence;
It *checks* too strong upon me."
Dryden.

II. *Falconry:* To stop, to hover over the game; to change the game while in pursuit, especially for an inferior kind.

". . . like the haggard, *check* at every feather
That comes before his eye."
Shakesp.: Twelfth Night, iii. 1.

¶ (1) Crabb thus distinguishes between to *check*, to *curb*, and to *control*:—"To *check* is to throw obstacles in the way to impede the course; to *curb* is to bear down by the direct exercise of force, to prevent from action; to *control* is to direct and turn the course: the actions of men are *checked*; their feelings are *curbed*; their actions or feelings are *controlled*. External means are employed in *checking* or *controlling*; external or internal means are employed in *curbing*: men *check* and *control* others; they *curb* themselves or others: young people ought always to be *checked* whenever they discover a too forward temper in the presence of their superiors or elders; it is necessary to *curb* those who are of an impetuous temper, and to keep youth under *control*, unless they have within themselves the restrictive power of judgment to *curb* their passions and *control* their inordinate appetites."

(2) He thus discriminates between to *check*, to *chide*, to *reprimand*, to *reprove*, and to *rebuke*:—"The idea of expressing one's disapprobation of a person's conduct is common to all these terms. A person is *checked* that he may not continue to do what is offensive; he is *chidden* for what he has done that he may not repeat it: impertinent and forward people require to be *checked*, that they may not become intolerable; thoughtless people are *chidden* when they give hurtful proofs of their carelessness. People are *checked* by actions and looks as well as by words; they are *chidden* by words only: a timid person is easily *checked* . . . the young are perpetually falling into irregularities which require to be *chidden*. To *chide* marks a stronger degree of displeasure than *reprimand*, and *reprimand* than *reprove* or *rebuke* . . . *Chiding* and *reprimanding* are employed for offences against the individual, and in cases where the greatest disparity exists in the station of the parties: a child is *chid* by his parent; a servant is *reprimanded* by his master. *Reproving* and *rebuking* have less to do with the relation or station of the parties than with the nature of the offence; wisdom, age, and experience or a spiritual mission give authority to *reprove* or *rebuke* those whose conduct has violated any law human or divine . . ."

(3) The difference between to *check* and to *stop* is thus stated:—"To *check* is to cause to move slowly; to *stop* is to cause not to move at all: the growth of a plant is *checked* when it does not grow so fast as usual; its growth is *stopped* when it ceases altogether to grow: the water of a river is *stopped* by a dam; the rapidity of its course is *checked* by the intervention of rocks and sands. When applied to persons, to *check* is always contrary to the will of the sufferer; but to *stop* is often a matter of indifference, if not directly serviceable: one is *checked* in his career of success by some untoward event; one is *stopped* on a journey by the meeting of a friend." (*Crabb: Eng. Synon.*)

çhĕck, * **çhĕk, çhĕque,** * **çhĕcque,** *s.* & *a.* [O. Fr. *eschec* = a check at chess, from Pers. *shāh* = king.] [CHECKMATE, CHESS.]

¶ Crabb thus distinguishes between to *cheer*, to *encourage*, and to *comfort*:—". . . To *cheer* and *comfort* have both regard to the spirits, but the latter differs in degree and manner: to *cheer* expresses more than to *comfort*; the former signifying to produce a lively sentiment, the latter to lessen or remove a painful one: we are *cheered* in the moments of despondency, whether from real or imaginary causes; we are *comforted* in the hour of distress. *Cheering* is mostly effected by the discourse of others; *comforting* is effected by the actions, as well as the words, of others. Nothing tends more to *cheer* the drooping soul than endearing expressions of tenderness from those we love: the most effectual means of *comforting* the poor and afflicted, is by relieving their wants." (*Crabb: Eng. Synon.*)

çhēer, * çheare, * çheere, * çhere, * çher, * çhiere, *s.* [O. Fr. *chere, chiere*; Ital. *cera*; Sp. & Port. *cara*, from Low Lat. *cara* = a face; Gr. κάρα (*kara*) = the head; Sanse. *çirus* = the head.]

A. *As substantive:*

1. The curd or caseine of milk, with variable quantities of butter and common salt, pressed into moulds and ripened by keeping. The various kinds of cheese differ chiefly in the mode of manufacture, the amount of fat which they contain, and in the flavour, which is due partly to the food, and partly to the breed of the animal. In this country, cheese is made from the milk of the cow, but on the continent of Europe it is made from goat's milk and ewe's milk, whilst in Arabia it is prepared from the milk of the camel and the mare. There are three kinds of cheese, viz., whole-milk, skim-milk, and cream-cheese. To the first class belong the Stilton, Cheddar, Dunlop, Gloucester, and American, all of which are made from unskimmed milk and contain from 30 to 40 per cent. of fat or cream, and 40 to 50 per cent. of caseine. Skim-milk cheese is poor in fat, containing from 1 to 4 per cent. Cream-cheese contains from 60 to 70 per cent.

Authorities differ as to the dietetic value of cheese, some affirming that it is very indigestible, whilst others assert that it assists digestion. Its digestibility, however, varies with its age, its texture, and its composition, and it is possible that it may produce different effects on different persons. Cream-cheese is more digestible than any other kind of cheese, owing to its containing less caseine.

Cheese is rarely adulterated. To suit the public taste it is frequently coloured with annatto, or some other vegetable colour, and as the colouring matter is not injurious, it cannot be considered an adulteration.

2. (Sing. *cheese*, or more frequently pl. *cheeses*): The fruit of two species of Mallow—(1) *Malva sylvestris*, and (2) *M. rotundifolia*.

chef d'orchestre, *s.* [Fr.] (1) The leader. (2) conductor of an orchestra. (*Stainer & Barrett.*)

chef-d'œuvre (pron. **shā-dŏvr**; *pl.* **chefs-d'œuvre**), *s.* [Fr. *lit.* a chief or masterpiece of work.] A masterpiece; a work of superior excellence in art, literature, &c.

*** cheffare,** *s.* [CHAFFARE.]

*** chēf-froŭn, * shăf-froŭn, * săf-ĕr-ŏn,** *s.* [Fr. *chaperon* = a hood, a French hood for a woman; also any hood, bonnet, or lettee cap. (*Cotgrave.*)] A kind of ornamental head-dress for ladies.

*** çhef-tan,** *s.* [CHIEFTAIN.]

chegre, çhegoe, *s.* [CHIGRE.]

*** çhēif,** *a.* [CHIEF.] (*O. Scotch.*)

*** cheif-schimmers,** *s.* A principal dwelling-place or manor-house (*Acts James VI.*) [CHEMYS.]

***cheif'-tyme,** *s.* [O. Scottish *cheif* = chief, and *tyme* = time.] The time of one's being chief, one's reign, a reign. (*Jamieson.*) (*Barbour's Coldingham.*)

chei-lăn'-thē-æ, *s. pl.* [Mod. Lat. *chellanth(us)*, and fem. pl. suff. *-ea.*]

Bot.: A section of polypodiaceous ferns, in which the sori are punctiform at the apices of the veins, and covered by indusia. Type, Cheilanthes.

chei-lăn'-thēs, *s.* [From Gr. χεῖλος (*cheilos*) = a lip, and ἄνθος (*anthos*) = a flower.]

Bot.: A genus of polypodiaceous ferns, the typical one of the group Cheilantheæ. The species, which are numerous, are spread over the tropical and temperate regions of the Old

CHEILANTHES.

1, *Cheilanthes argentea* (portion of underside of frond). 2, *Cheilanthes fragrans* (ditto fertile segment enlarged).

and New Worlds. They are for the most part dwarf plants, inhabiting dry rocky situations. The distinguishing features of the genus consist in its producing small punctiform sori at the ends of the veins close to the margin of the frond, the margin itself becoming membranaceous, and bent over them to form the indusia, which are either linear and continuous, or take the shape of roundish lobes.

chei-lō-dăc'-tȳl-ĭa, *s.* [Gr. χεῖλος (*cheilos*) = a lip; δακτυλος (*daktulos*) = a finger.]

Ichthy.: A genus of ovate-bodied fishes belonging to the family *Chætodontidæ*. They have small mouths and dorsal fins, with numerous spiny rays.

chei-lō-dĭp'-tĕr-ŭs, *s.* [Gr. χεῖλος (*cheilos*) = a lip; δίπτερος (*dipteros*) = double-finned, from δίς (*dis*) = twice, and πτερόν (*pteron*) = a wing, a fin.]

Ichthy.: A genus of Acanthopterygious fishes, belonging to the Percidæ or Perch family. Most of the species inhabit the Indian seas.

chei-lŏg'-nə-thə, *s.* [Cheilognatha.]

***chei-lōs'-cȳph-ŭs,** *s.* [Gr. χεῖλος (*chei'os*) = a lip, a brink, an edge, and σκύφος (*skuphos*) = a cup.]

Bot.: A genus of Jungermanniæ (Hepaticæ), founded upon *Jungermannia polyanthus* (Linn.), which is not unfrequent in wet places. (*Grif. & Henfrey.*)

***chei-lō-stŏm'-ə-tə,** *s.* [Gr. χεῖλος (*cheilos*) = a lip, an edge, and στόμα (*stoma*) = a mouth.]

1. *Zool.:* A suborder of Infundibulate (Marine) Polyzoa, having the orifice of the cell filled with a thin membranous or calcareous plate, with a curved mouth, furnished with a movable lip. It is divided into two sections. (1) Articulata, containing the families Salicornariadæ and Cellularidæ, and (2) the Inarticulata, containing numerous families. (*Grif. & Henfrey.*) [Inarticulata.]

2. *Palæont.:* Representatives of the Cheilostomata seem to have come into existence as early as the Silurian times, but most of the species found have been Cretaceous or Tertiary.

***chei-lō-stŏm'-ə-tous,** *a.* [Gr. χεῖλος (*cheilos*) = a lip, and στόμα (*stoma*) = a mouth.] Of the nature of or belonging to the Cheilostomata (q.v.).

"The ovicell is a structure especially characteristic of the *cheilostomatous* polyzoa."—*Nicholson: Palæont* (2nd ed.), ii. 418.

cheim, *v.t.* [Probably a corruption of Eng. *chine* (q.v.).] To divide equally, especially in cutting down the backbone of an ass: 1. (*Scotch.*)

cheip, cheipe, *s.* [Cheep, *v.*] A chirping, squeaking, or croaking.

cheip (1), **cheep, chepe,** *v.i.* [From the sound.] (*Scotch.*)

1. To peep, to chirp, as young birds in the nest.

"The gaer'ling of the cleiteuc gart the cuertee cheip."—*Dunbar: Tournament*, p. 68.

2. To squeak with a shrill and feeble voice.

"... the maxim of the Dongleanes, that it was 'better to hear the lark sing, than the mouse cheep,' was adopted by every border chief."—*Stoutenlaw: Border, Prof. Trav.*

3. To mutter (applied metaph. to man).

"Their wyfe hes maistery,
That they dar na cwyis cheip."
Bannatyne Poems, p. 178, st. 7

4. To creak. In this sense shoes are said to *cheip* when they retain the music of the last. A door is also said to *cheip* when the sound occasioned by its motion grates the ear.

***cheip** (2), *v.t.* [Cheap, *v.*] To buy or sell.

cheip, *s.* [Cheep, *s.*]

cheip'-ĕr, *s.* [*Cheip* (1), *v.*; *-er.*]

1. *Zool.:* The Cricket, an insect so named from the noise it makes.

2. *Bot.:* The Bug-iris, so called because children make a shrill noise with its leaves.

cheip'-ĭng, *pr. par.*, *a.*, & *s.* [Cheeping.]

cheir, *s.* [See def.] An abbreviation of Cheiranthus (q.v.).

Wild cheir: The Wallflower, *Cheiranthus cheiri.*

cheïr-ə-căn'-thĭn, *s.* [From Gr. χείρ (*cheir*) = the hand, and ἄκανθα (*akantha*) = a thorn, a prickle.]

Palæont.: A genus of ganoid fishes founded by Agassiz for species from the Old Red Sandstone of Gowrie in Forfarshire and of the Orkney Islands.

cheïr-ăn'-thĕr-ə, *s.* [Gr. χείρ (*cheir*) = a hand; Lat. *anthera* = an anther, from Gr. ἀνθηρος (*anthēros*) = blooming.]

Bot.: A genus of Pittosporaceæ, containing an Australian undershrub with erect stems and narrowly linear acute leaves; peduncles terminal, with small blue corymbose flowers; calyx of five sepals; petals and stamens five each; fruit dry, two-celled. (*Treas. of Bot.*)

cheïr-ăn'-thĭn, *s.* [Gr. χείρ (*cheir* = the hand, and ἄνθος (*anthos*) = a flower.]

Bot.: A genus of cruciferous flowers, of which *Cheiranthus cheiri*, the Wallflower, is well known. In its wild state the flowers are always single and of a bright yellow colour, but the cultivated plants produce a wide variety of tints. The Wallflower is by some supposed to be the *Viola* of the Latin poets. [Wallflower.]

***cheïr-ə-găl'-ĕ-ŭs,** *s.* [Gr. χείρ (*cheir*) = the hand, and γαλεος (*galeos*) = a young weasel or kitten.]

Zool.: A genus of Quadrumana belonging to the Lemuridæ (q.v.).

cheïr-ŏl'-ĕp-ĭs, *s.* [Gr. χείρ (*cheir*) = the hand, and λεπις (*lepis*) = a scale.]

Palæont.: A genus of fossil fishes found in the Old Red Sandstone of Morayshire and the Orkney Islands. (*Miller: Old Red Sandstone*, ch. iv.) It is doubtfully referred to the Lepedosteidæ. It is akin to Palæoniscus.

cheïr-ŏl'-ə-gȳ, *s.* [Gr. χείρ (*cheir*) = the hand, and λόγος (*logos*) = a discourse, a treatise.] A treatise on the language of the hands; also a mode of conversing with manual signs practised by the deaf and dumb.

cheïr-ŏm'-ȳ-dæ, *s. pl.* [From Mod. Lat. *cheiromys* (q.v.), and fem. pl. adj. suff. *-idæ.*]

Zool.: A family of mammals, order Quadrumana, tribe or section Strepsirhina.

***cheïr'-ə-mȳs,** *s.* [Gr. χείρ (*cheir*) = a hand, and μῦς (*mus*) = a rat.]

Zool.: The genus containing the Aye-aye, a singular animal inhabiting Madagascar. It is the Aye-aye Squirrel of Pennant. Swainson classed it amongst the Rodentia or Glires; it is now placed near the Lemurs. It is *Cheiromys madagascariensis*, formerly called *Sciurus madagascariensis*. Its large and flat ears resemble those of a bat, while its habits approach those of the squirrels. It is of a musk-brown colour mixed with black and ash-grey; tail black.

cheï-rō-nē'-tĭng, *s.* [Gr. χειρ (*cheir*) = the hand; νήχω (*nēchō*) = to swim.]

1. *Ichthy.:* The Frog-fish, the name given by Cuvier to a genus of Acanthopterygian fishes, comprising some of those fishes popularly known under the name of Anglers. They are most grotesquely and hideously shaped, having the pectoral fins supported like short feet on peduncles, by means of which they can creep over mud or sand when left dry by the receding tide. [Angler.]

2. *Zool.:* A name given by Illiger to a group of marsupial animals, the opossums, in which the hinder legs are webbed. [Didelphidæ.]

cheï-rŏn'-ō-mȳ, *s.* [Gr. χειρ (*cheir*) = the hand; νομος (*nomos*) = a law, a regulation.] The management of the hands with appropriate movements and gestures in speaking.

"*Cheironomy* or the decorous and expressive movement of the hands being especially practised."—*Grote: Hist. Greece*, ch. lii.

cheï-rō-plēū'-rȳ, *s.* [Gr. χειρ (*cheir*) = hand; πλευρά (*pleura*) = a rib.]

Bot.: A synonym of Asparagus, apt: *A. asparagoides*, and *A. scandens*, two species which are remarkable in bearing fronds or a form resembling bats'-wings.

cheïr-ŏp'-ŏ-dĭst, *s.* [Cheiropodist.]

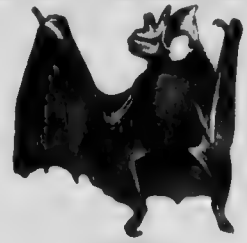
***cheïr'-ə-pŏd,** ***cheïr-ŏp'-ŏd-ə,** *s. pl.* [From Gr. χειρ (*cheir*) = the hand, and πους (*pous*), genit. ποδ. (*podos*) = a foot.]

Zool.: Ogilby's name for the mammalia possessed of hands, all of which he brings together, dividing them again into Bimana (two-handed, including man; Quadrumana (four-handed), including monkeys, Pedimana (foot-handed, including the lemurs, rabbits, the cheiromys, and the didelphidæ). His terms have not been adopted by other zoologists.

† cheïr-ŏp'-tĕr, *s.* [Cheiroptera.] A mammal belonging to the order Cheiroptera (q.v.).

cheïr-ŏp'-tĕr-ə, *s. pl.* [Gr. χειρ (*cheir*) = the hand; πτερον (*pteron*) = a wing.]

1. *Zool.:* The name of an order or tribe of mammiferous animals having the fingers elongated for the expansion of membranes which act as wings. It contains the bats. They are widely spread over the globe.



CHEIROPTERA.

Generally speaking they remain in concealment during the day in hollow trees, caverns, ruins, &c., and flit forth at dusk to seek their prey, which consists principally of flies. The genera and species are numerous. The Cheiroptera are divided primarily into Frugivorous Bats and Insectivorous Bats, the first of which containing only one family, Pteropidæ (Fox-bats, or Roussettes), and the second three, viz. Vespertilionidæ or Typical Bats, the Rhinolophidæ or Horse-shoe Bats, and Phyllostomidæ, Vampire Bats or Vampires.

2. *Palæont.:* Bats have been found as early as the Eocene.

cheïr-ŏp'-tĕr-ŏŭs, *a.* [Eng. *cheiropter(a)*; *-ous.*] Of or belonging to the Cheiroptera; having elongated fingers or toes for the expansion of membranes which act as wings.

cheïr-ŏs'-pŏr-ə, *s.* [Gr. χειρ (*cheir*) = the hand; σπορά (*spora*) = a seed.]

Bot.: A genus of Melanconiei (Coniomycetous Fungi), growing upon the twigs of the

beach. The beasts are formed of chains of spores, like a Pentacrinus. (*Grif. & Henfrey*)

cheir-ó-ste-mŏn, *s.* [Gr. χείρ (*cheir*) = hand; στήμων (*stēmōn*) = a stamen. So called from the hand-like form of the anthers.]

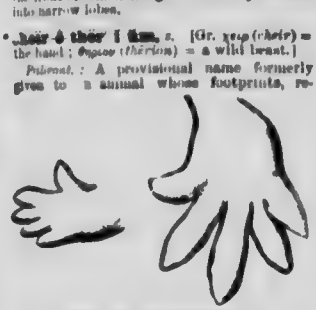
Bot.: A genus of Sterculiads, of which *Cheirostemon platanoides*, the Hand-flower tree, or Macpalxochitlquahuitl of the Mexicans, is the sole species. It is a tree growing thirty or more feet in height, and having plane-like leaves of a dingy-green colour on the upper surface, but coloured underneath with a rust-coloured scurf composed of star like hairs; each leaf being about six inches long by five broad, deeply indented at the base, and divided at the margin into from three to seven blunt-rounded lobes. The flowers are two inches long, by as much broad, with a leathery rusty-red, cup-shaped calyx; stamens bright-red, united for about one-third of their length, and then separated into five curved claw-like rays, bearing some slight resemblance to the human hand. Forests of the tree exist near the city of Guatemala. (*Treas. of Bot.*)

cheir-ó-stŷ-lis, *s.* [Gr. χείρ (*cheir*) = the hand; στύλος (*stulos*) = a style.]

Bot.: A genus of terrestrial orchids, consisting of little plants, with the habit of Aneectochilus, to which it is nearly allied. It has the three sepals united into a short tube, from the front of which hangs down a lip divided into narrow lobes.

***cheir-ó-ther-i-ŭm,** *s.* [Gr. χείρ (*cheir*) = the hand; θήριον (*therion*) = a wild beast.]

Paleont.: A provisional name formerly given to a animal whose footprints, re-



TRACKS OF CHEIROTHERIUM.

sembling those of a human hand, are found in the New Red Sandstone. The name has lapsed, for the footprints are now known to have been made by one of the huge Batrachians, for which the late Professor Owen founded the genus Labyrinthodon (q.v.).

cheir-ur-i-dæ, *s. pl.* [From Mod. Lat. *cheirurus* (q.v.), and fem. pl. adj. suff. *-idæ*.]

Paleont.: A family of Trilobites. The head shield is well developed, and there are eleven, ten, or twelve body rings.

cheir-ŭr-ŭs, *s.* [From Gr. χείρ (*cheir*) = a hand, and οὐρά (*oura*) = a tail.]

Paleont.: A genus of Trilobites, the typical one of the family Cheiruridæ. It is found in Swedish.

***çheis,** *v.* [Choose.]

***çhei-tie,** *v. i.* [From the sound.] To chirp, to chatter, or to warble.

***chei-tor, *chei-tur,** *s.* [O. Fr. *escheteur*; Low Lat. *escaetor*.] An escheator.

"Shireves, *chesteres* and chaunceler."
Wright Polit. Songs, p. 239.

***çhék, *çheke** (1), *s.* & *v.* [Check, *s.* & *v.*]

***çhék, *çheke** (2), *s.* [Cheek.]

che-ke-o, che-ko-a, *s.* [Chinese.] A fine paste prepared by calcination and trituration from a hard stony substance. It is used by the Chinese in drawing figures in wholly white chinaware, which they afterwards varnish.

***çhéke-máte,** *s.* & *v.* [Checkmate, *s.* & *v.*]

***çhék-ér** (1), ***çhek-yr,** *s* [Checker, Chequer.]

"A *cheker*; *scaccarium*."—*Cath. Anglicum.*

çhék-ér (2), *s* [Contracted from O. Fr. *eschequier* = the exchequer.] The exchequer. (*Scotch.*)

chek-mak, *s.* [Turkish.]

Fabrics: A Turkish fabric of silk and gold thread, mixed with cotton.

chē-lę, chē-lē, *s.* [Gr. χηλή (*chēlē*) = a claw.]

1. *Sing.* (*Of the form* chele) (*Owen*): One of the bifid claws of the Crustacea, Scorpions, &c. [Chely.]

2. *Pl.* Chelæ: The modified fourth pair of thoracic limbs in lobsters and their allies; the modified mandibles in scorpions. (*Huxley.*)

3. *Ichthy.*: A genus of fishes belonging to the Salmonidæ, sub-family Cyprinæ. The mouth is very small, and opens vertically. anal fin long.

chē-lāte, *a.* [Gr. χηλή (*chēlē*) = a claw.] Having the form or appearance of a claw, possessed of claws.

"The foremost two pairs [legs] are terminated by double claws, arranged so as to form a pincer, whence they are said to be *chelate*."—*Huxley. Crayfish*, p. 92.

***che-laun-dre,** *s.* [Chalandre.]

"Than is bliefful many eithe,
The *chelaundre*, and the popynjay."
Romaunt of the Rose.

***chele** (1), *s.* [Chill.]

"Her is *chele* and hete."
Old Eng. Miscell. (ed. Morris), p. 73.

chele (2), *s.* [Chela.]

chē-l-ē-ryth-rine, *s.* [From Mod. Lat. *chel(idonium)*; Gr. ἐρυθρός (*erythros*) = red, and Eng. suff. *-ine* (*Chem.*) (q.v.).] A substance obtained in the form of a gray powder from the plants *Chelidonium majus* and *Glaucium luteum*, which powerfully excites sneezing. Under the action of acids it takes a fine orange colour, and forms neutral salts, which act as narcotics when taken in small doses.

chēl-eŭ-tite, *s.* [From Gr. χαλεύτης (*chalcutēs*) = netted, plaited, and Eng. suff. *-ite* (*Min.*).]

Min.: A variety of Smaltine (q.v.). (*Brit. Mus. Cat.*)

chēl-ię-ér-ę, chēl-ię-ér-ęs, *s.* [Gr. χηλή (*chēlē*) = a claw; κέρας (*keras*) = a horn.] A name given by Latreille to two appendages on the heads of spiders and scorpions, which he considers as representing the mesial antennæ of the Decapod Crustaceans, converted in these Arachnidans into organs for the seizure of food.

chēl-ich-nŭs (*ch* guttural), *s.* [From Gr χηλή (*chēlē*) = a horse's hoof, a bird's talons a wolf's claws, &c., and ἴχνος (*ichnos*) = a footstep.]

Paleont.: A temporary and provisional genus, formed for the reception of certain footprints like those made by chelonians. *Chelichnus Duncani* (Sir William Jardine) is the name given to certain footprints in the Permian rocks of Annandale. It is doubtful if they were really made by chelonians, and when it is discovered what animal really produced them, the term Chelichnus will be superseded, as Cheirotherium was by Labyrinthodon. (See these words.)

***chēl id-ér-ect,** *s.* [O. Fr. *chelydre*.] A kind of serpent; a basilisk. [Chelydra.] Dr. Murray suggests that it may be a "bad spelling of *chelydrie*," noting that "aspect" aspic = asp.)

"Thair was the Viper, and th Aspect,
With the serpent *Chelidrect*;
Quhois stink is felt maist."
Bannatyne Poly, *Watson's Coll.*, ii. 21.

chēl-i-dŏn (1), *s.* [Celandine.]

chēl-i-dŏn (2), *s.* [Gr. χελιδών (*chelidōn*) = a swallow . . . a hollow above the bend of the elbow (so called from being like the fork in a swallow's tail).] The hollow at the flexure of the arm.

chēl-i-dŏn-ic, *a.* [Eng. *chelidon*; *-ic*.] Pertaining to or derived from chelidon, 1

chelidonic acid, *s.*

Chem.: $C_7H_4O_5$. A tribasic acid, which occurs combined with lime in *Chelidonium majus*. It crystallizes in colourless needles, soluble in water.

chēl-id-ŏn-ine, *s.* [From Mod. Lat. *chelidon(ium)* (q.v.), and Eng., &c. suff. *-ine* (q.v.).

Chem.: A bitter principle extracted from *Chelidonium majus* and *Glaucium luteum*. It consists of 40 atoms of carbon, 20 of hydrogen, 6 of oxygen, and 3 of nitrogen. When pure it forms colourless scales of a bitter taste.

chēl-i-dō-ni-ŭm, *s.* [Celandine.]

Bot.: Celandine, a genus of plants of the order Papaveraceæ. The Greater Celandine is a glaucous hairy annual plant, with pinnately-lobed leaves, small yellow flowers in a loose umbel, and a fruit consisting of a long pod, containing a number of seeds with a small crest on them. It is full of a yellow juice, which is of an acrid poisonous nature, and has been used in certain diseases of the eye, and as a caustic to destroy warts, &c. *Chelidonium majus* is found wild in Britain and the North of Europe, in Siberia, and in Western Asia as far as Persia. Its juice is a virulent acrid poison.

***chēl-i-dŏn-ize,** *v. i.* [Gr. χελιδονίζω (*chelidonizō*) = (1) to twitter like a swallow, (2) see def., from χελιδών (*chelidōn*).]

Gr. antiq.: To sing the swallow song, *i.e.*, the song welcoming the return of the swallows, which was done by the Rhodian boys in the month of Boëdromion, the act being made a pretext for begging. (*Steiner & Barrett.*)

chēl-i-dŏn-i-zing, *pr. par.*, *a.*, & *s.* [Chelidonize.]

A. & **B.** *As pr. par.* & *adj.*: (See the verb).

C. *As subst.*: Singing the "swallow-song."

***chēl-i-dre,** *s.* [O. Fr. *chelydre*; Lat. *chelydrus*; Gr. χελύδρος (*chelydros*) = an amphibious serpent, from χέλυς (*chelus*) = a tortoise, and ὕδωρ (*hudōr*) = water.] A serpent

"*Chelidre* her yede her aldres chin."
Gower C. A., ii. 224.

chēl-i-dæ, *s. pl.* [From Lat. *chelydr(us)*, and fem. pl. suff. *-idæ*.]

Zool.: The Crocodile Tortoises, a family of Chelonians, in which the tail is long, and the head not retractile. Order, Chelonides.

chēl-i-fēr, *s.* [Gr. χηλή (*chēlē*) = a claw; Lat. *fero* = to bear.]

Zool.: A genus of Arachnidans, Spiders, which have the appearance of small scorpions without the tail.

chēl-i-fēr-i-dæ, *s. pl.* [From Mod. Lat. *chelifer* (q.v.), and Lat. fem. pl. adj. suff. *-idæ*.]

Zool.: A family of the class Arachnida, order Adelarthrosmata. For their form see Chelifer. They are sometimes found among old books, and when disturbed run forwards, backwards, sideways, or in any direction which they please. They sometimes attack the common fly.

chē-lif-ér-oŭs, *a.* [Chelifer.] Furnished with chelæ or cheliform appendages.

"One of the short *chelíferous* legs."—*Dana: Crustacea*, pt. i., 438.

¶ *Chelíferous Slaters*:

Zool.: The name given to the Cursorial Isopod Crustaceans of the genus Tanais.

chē-li form, *a.* [Gr. χηλή (*chelē*) = a claw; Lat. *forma* = a form, an appearance.] Having the form or appearance of a claw; claw-shaped.

çhe lingue, *s.* [An East Indian word.] The same as Sulamanie.

chél-i-no-tŭs, *s.* [Gr. χέλυς (*chelus*) = a tortoise, and νῶτος (*nōtos*) = the back.]

Zool.: A genus of Mollusca, belonging to the Heliotidæ, or Ear-shells: the animal is cheliform: shell ear-shaped, thin, fragile, imperforate, and without a pillar, and entirely concealed in the back of the animal.

chél-mon, *s.* [Gr. χελμών (*chelmōn*) (Hesychius), from χέλυς (*chelūn*) = a fish with a long snout.]

Ichthy.: A genus of fishes in which the mouth is prolonged into a slender snout or tube: family, Chætodontidæ. *Chelmon rostratus*, a species found in the seas of China, is kept by the people of that country in basins, that they may witness it projecting drops of water at flies hung above them on strings; their aim in such cases is remarkably exact.

çhélms-fórd-ite, *s.* [From Chelmsford in Massachusetts, U.S., where it occurs; and suff. *-ite* (*Min.*) (q.v.).]

Min.: A variety of Wernerite (q.v.). The crystals are of a grey-greenish or reddish shade. (*Dana.*)

chē-lō-dīn-ę, *s.* [Gr. χέλυς (*chelus*) = a tortoise; and εἶδος (*eidos*) = form, appearance.]

Zool.: A genus of the Emydæ, or River Tortoises, in which the neck is remarkably long. Order, Chelonidea.

chē-lō'-nē, *s.* [Gr. χελώνη (*chelōnē*) = a tortoise.]

1. *Zool.:* A genus of turtles, often written Chelonia. Thus, the common green turtle is called by some naturalists *Chelone midas*, and by others *Chelonia midas*.

2. *Bot.:* A small genus of linariads, closely allied to the Pentstemons. The corolla has a broad-keeled upper lip and scarcely open mouth, giving it some resemblance to the head of a tortoise or turtle, to which it owes its scientific appellation, and the American popular name of Turtlehead. The best-known species is *Chelone obliqua*, a perennial with creeping roots and flowers in terminal spikes, with corollas mostly of a rosy purple colour.

chē-lī-ā'-nā-ē, *s. pl.* [From Gr. χελώνη (*chelōnē*) = a tortoise (Chelone), and Lat. pl. suff. *-æ*.]

Bot.: A tribe of Scrophulariaceous plants, type Chelone (q.v.).

chē-lō-nī'-ā, *s.* [Gr. χελώνη (*chelōnē*) = a tortoise.]

Zoology:

1. A genus of reptiles, the typical one of the family Chelonidæ. It contains the Turtles proper. *Chelonia midas* is the Green Turtle, *C. imbricata* the Hawk's-bill Turtle, and *C. caretta* the Loggerhead Turtle. [Chelone.]

2. In Prof. Owen's classification, the 12th order of the class Reptilia, or Reptiles. It includes the Tortoise, Turtle, &c.

chē-lō'-nī-an, *a. & s.* [Chelonia.]

A. *As adj.:* Of or pertaining to the Chelonia.

B. *As subst.:* One of the order of Chelonia.

"... in the thorax of birds and chelonians. ..."—*Owen: Anatomy of Vertebrates*, ch. iii., p. 44.

chē-lō-nī'-ī-dæ, *s. pl.* [Mod. Lat. *chelonī(a)*, and fem. pl. suff. *-idæ*.]

1. *Zool.:* The Sea-turtles, a family of the order *Chelonia* (q.v.). They are all marine.

2. *Paleont.:* The Chelonidæ appear at least as early as the Portland Stone in the Upper Jurassic beds. They are abundant in the Eocene.

chē-lō-nīte, *s.* [Gr. χελώνη (*chelōnē*) = a tortoise, and Eng. suff. *-ite* (q.v.).] A name given to certain species of fossil Echini of the genus Cidaris.

chēl-ō-nō-bā-trā'-chī-ą, *s. pl.* [From Gr. χελώνη (*chelōnē*) = a tortoise, and βατραχος (*batrachos*) = a frog.]

Zool.: A name sometimes given to the amphibian order of Anoura, which contains the frogs and toads.

***chē'-lŷ,** *s.* [Lat. *chela*; Gr. χήλη (*chēlē*) = a claw.] The claw of a lobster. [Chela.]

"It happeneth often, I confess, that a lobster hath the *chely* or great claw, of one side longer than the other."—*Brown.*

chē-lŷd'-ē-ą, *s.* [From Gr. χελυς (*chelus*) = a tortoise.]

Zool.: A genus of turtles, family Emydidæ. *Chelydra serpentina* is the Alligator Tortoise of North America.

chē-lŷd'-ī-dæ, *s. pl.* [From Lat. *chelys* (q.v.), and fem. pl. adj. suff. *-idæ*.]

Zool.: A family of Chelonians. They resemble the Trionycidæ, but have a carapace sufficiently large to allow the head and neck to be retracted within it. Of the five toes, three or four are furnished with claws, whereas in the Trionycidæ only three are thus armed.

chēl'-ŷ-drą, *s.* [From Lat. *chelydrus*; Gr. χελύδρος (*cheludros*) = a fetid snake, living in water, from χελυς (*chelus*) = a tortoise; and ὕδωρ (*hudōr*) = water.]

Zool.: A genus of Chelonians; family Trionycidæ. *Chelydra serpentina* is the Snapping Turtle. It is found in the United States. It destroys many young alligators, and occasionally bites pieces of flesh from the bodies of any bathers at whom it has an opportunity of snapping.

chēl'-ŷs, *s.* [Lat. *chelys*; Gr. χέλυς (*chelus*) = a tortoise.]

1. *Music:*

(1) The lyre of Mercury, supposed to have been formed by stretching strings across a tortoise-shell.

(2) In the 16th and 17th centuries a bass-viol and division-viol were each called chelys. (*Skinner & Barrett.*)

2. *Zool.:* A genus of turtles, the typical one of the family Chelyidæ (q.v.). They live in the ponds and rivers of warm countries, feeding on fish.

***chē-mee,** *s.* [Chemus.]

chĕm'-ic, *chĕm'-ick, *a. & s.* [In Fr. *chimique*; Sp., Port., and Ital. *chimico*; from Gr. χημεία (*chemeia*).] [Chemistry, I. 1 (2).]

A. *As adj.:* Chemical.

B. *As subst.:* A chemist, an alchemist.

"... those *chymicks*, seeking to turn lead into gold, turn away all their own silver."—*Bruyer: Lingues*, iv. 1.

chĕm'-ic-ą̆l, chĕm'-ic-ą̆l, *a. & s.* [Eng. *chemic*; *-al*.]

A. *As adj.:* Of or belonging to chemistry, as chemical action; resulting from the forces investigated by chemistry, as chemical changes; designed for such investigation, as the Chemical Society.

B. *As subst.* (pl. *chemicals*):

1. Substances having a definite chemical composition, as crystallised cupric sulphate, $CuSO_4.5H_2O$.

2. Chemical reagents.

¶ *Chemical affinity:* [Affinity].

Chemical analysis: [Analysis].

Chemical apparatus: Apparatus designed for chemical purposes, such as a blowpipe, retorts, test tubes, reagents, &c.

Chemical attraction: The same as *Chemical affinity* (q.v.).

Chemical combination: The combination of chemical substances into a compound different from any of the constituents, and having a definite percentage composition, and mostly having their vapour densities the halves of their molecular weights. When such union takes place heat is generally evolved. The constituents of a chemical compound cannot be separated by mechanical means. [Combination.]

Chemical deposits:

Geol.: Deposits, like carbonate of lime, thrown down from water by chemical action. They are distinguished from mechanical deposits precipitated by mechanical means. (*Lyell.*)

Chemical equivalents: The relative proportions in which chemical substances will replace one another, according to their atomicity (q.v.); thus one atom of oxygen, a dyad element, is the chemical equivalent of two atoms of hydrogen, a monad element.

Chemical formulæ: The formulæ or symbolic expressions which indicate the chemical constituents of a body, as NaCl indicates that chloride of sodium contains one atom of chlorine and one atom of sodium.

Chemical furnace: A small furnace for laboratory uses.

Chemical notation: [Notation].

Chemical printing: (See the compound).

Chemical printing-telegraph: An apparatus for printing symbols upon prepared paper by means of electro-chemical action; as, for instance, by an iron stylus on paper prepared with a solution of yellow cyanide of potassium.

Chemical reagents: Pure chemicals used for testing.

Chemical Society of London: A Society founded on Feb. 23, 1841. The letters F.C.S. indicate a Fellow of the Chemical Society.

Chemical works: Manufactories where chemical processes are carried out on a large scale. They are regulated chiefly by the Alkalies Act of 1863, which requires them to condense at least 95 per cent. of the muriatic acid gas which they produce.

chĕm'-ic-ą̆l-ly, *adv.* [Eng. *chemical*; *-ly*.] By a chemical process; opposed to mechanically, &c.

"... the sun's rays had become so tempered by distance and by waste as to be chemically fit for the decompositions necessary to vegetable life."—*Tyndall: Frag. of Science* (3rd ed.), xvii., 1858-3.

chĕm'-ick-ing, *s.* [O. Eng. *chemick*; *-ing*.]

Bleaching: The process of steeping goods in a dilute solution of chloride of lime in close vats, the liquor being continuously pumped up and straining through the goods until the action is complete. This process is the same which sets free the chlorine. [Bleaching.]

chĕm-i-cō, *pref.* [Chemic.] Relating to chemistry. (The meaning completed by the second element.)

chemico-algebraic, *a.* Relating to chemistry and algebra.

chemico-electric, *a.* Pertaining to or derived from electric force excited chemically, not mechanically.

chemico-galvanic, *a.* The same as chemico-electric (q.v.).

chemico-technical, *a.* Pertaining to chemistry as applied to the arts and manufactures.

chĕm'-i-cō-graph, *s.* [Lat. *chemicus* = chemical, and suff. *-graph* (q.v.).]

Chem.: A diagrammatic representation of the constitution of a chemical substance. It consists of the symbols of the respective atoms connected by lines or bands.

chĕm-i-cō-glўph'-ic, *a.* [From Gr. χημεία (*chemeia*) = chemistry, and γλυφικός (*glyphikos*) = engrave.] Engraved by means of a galvanic battery.

chē-mi'-ge (1), *s.* [Fr.; Ital. *camicia*, Sp. & Port. *camisa*, from Low Lat. *camisia* = a shirt, from Arab. *qamis* = a shirt. (Skeat.)]

1. *Ord. Lang.:* A shift or under garment worn by females.

2. *Fortif.:* A wall for lining a masked ditch.

¶ *Chemise de Notre-Dame:*

Bot.: *Convolvulus*, or *Calystegia sepium*.

***chē-mi'-ge (2), *che mye, *chymse,** *s.* [O. Fr. *Chemise* = the principal house on a estate.] A chief dwelling, as the manor-house of a landed proprietor or the palace of a prince.

"The *chemise* or principall mansage setled ... doubtlesse now growne in name of chemise ... as women. ..."—*Holland: Pliny*, p. 15.

chĕm-i-zĕtte', *s.* [Fr., dim. of *chemise* (q.v.).] An under garment worn by females over the chemise. (*Quain.*)

chĕm'-ist, *chym'-ist, *s.* [A short form of *alchemist* (q.v.). In Sw. *kemist*, Dut. *chemist*; Fr. *chimiste*; Sp. *chimista*.]

* 1 An alchemist.

"I have observed generally ... sophists, as of several other men ... that their thoughts are carried ..."—*W. Mure: A Brief Discourse of Inchantments* (French.)

2. One versed in the science of chemistry.

¶ There are different kinds of chemists as a *pharmaceutical chemist*, an *agricultural chemist*, an *analytical chemist*, a *metallurgical chemist*, &c.

***chĕm-is'-tic-ą̆l,** *a.* [Eng. *chemist*, *-ic*, *-al*.] Relating to chemistry. (*Barlow.*)

chĕm'-is-try, *chym'-is-try, *s.* [Eng. *chemist*; *-ry*. In Sw. *kemi*, Dut. *chemie*, Fr. *chimie*, *chymie*; Sp. *[illegible]*, Port. *chimica*, *chymica*; Ital. *[illegible]*, Sp. *alquimia*, from Arab. *[illegible]* (q.v.).] The science which investigates the several elements of which bodies are composed, and the laws which regulate the combination of these elements and the reaction of chemical compounds on each other.

1. *History:*

(1) Claims to have been the originator of chemistry have been put in by almost all the Egyptians and the Chinese, but data are wanting. The blow-pipe was known to a former people (Vol. I., p. [illegible]).

(2) *The Greek period:* The first stage in the development of chemistic seems to have been conducted by the Greeks, who paid prominent attention to investigating the properties of plant juices for medicinal purposes. This would now be called pharmacy, but some of the more recondite researches laid the foundation of organic chemistry.

(3) *The Arabian and Medieval periods* (Time of Alchemy): When the Arabs adopted the Greek word χημεία (*chemeia*) or its analogue and prefixed to it their article *al* the [illegible]

ancients took a new form, and were mainly those to which the term Alchemy is still applied. Geber himself had defined χημεία (*chēmeia*) as "the making of silver and gold." The Moors introduced alchemy into Spain about A.D. 1150. For its further history see ALCHEMY.

(4) *The modern period* (that of Chemistry properly so called): As astronomy developed from astrology, so chemistry came forth from alchemy. The transition was gradual, but a considerable part of it was effected in the 17th century, though struggling alchemists flourished till the 18th.

Among the discoveries which have made chemistry what it now is, the following may be mentioned. Boyle, who published his "Sceptical Chemist" in 1660, introduced the use of chemical reagents or tests. In 1674 Mayow, of Oxford, perceived that respiration produced the same effect on atmospheric air as combustion did. In 1756 Dr. Black proved that an aeriform body (carbon dioxide) existed in carbonate of lime, thus distinguishing it from quicklime. About 1765 Mr. Cavendish brought to notice hydrogen gas. On August 1, 1774, Dr Priestley discovered oxygen, and in the latter year Cavendish made known the constituent elements of water. In 1774 Scheele discovered chlorine, and in 1785 Berthollet pointed out the use which might be made of it in bleaching, the same year also he described the elements of ammonia. In 1797 Vauquelin discovered chromium. In 1803 Dalton introduced his atomic theory. In November, 1807, Sir Humphrey Davy announced the existence of potassium and sodium. Klaproth during his life, which ceased in 1817, analysed nearly 300 minerals. The synthesis of urea by the molecular transformation of ammonium cyanate, by Wöhler in 1828, also the discovery of the synthesis of cyanogen and alcohol, &c., showed that organic compounds could be formed without the aid of plants or animals. The discoveries of Wurtz, Berthelot, Kolbe, Liebig, &c., the researches of Williamson on ethers, Hoffmann on compound ammonias, Frankland on organic radicals, Kekulé on the benzene series, Bunsen's spectroscopic researches, leading to the discovery of the elements cæsium and rubidium, followed by the discovery of thallium by Crookes, &c., and the synthesis of alizarin and indigo, may be mentioned to give some idea of the rapid progress of chemistry in recent years. (Consult Watts's *Dic. Chem.* and the *Journals* of the English, German, and French Chemical Societies.)

2. *Modern divisions of chemistry:* It is divided into *organic* and *inorganic* chemistry, the former comprising the chemistry of carbons and the compounds derived from them, and the latter dealing with the compounds of the other elements. The supposed distinction between organic and inorganic compounds was broken down by Wöhler in 1828 by his preparation. Another classification is into pure or theoretical, analytical, and applied or practical chemistry. The latter may be subdivided according to the arts or occupations which it is designed to benefit, as *agricultural* chemistry, &c.

chem-i-type, *s.* [Eng. *chemi(c)*, and *type* (q.v.).]

Engraving: A somewhat general term which includes a number of relief processes by which a drawing or impression from an engraved plate is obtained in relief, so as to be printed on an ordinary printing-press.

***chem-ne,** *s.* [CHIMNEY.]

chém-nit-zi-a, *s.* [Named after Chemnitz, a distinguished conchologist of Nuremberg, who published a work on shells in seven vols. between 1760 and 1795.]

Zool.: A genus of gasteropodous molluscs, family Pyramidellidæ. The shell, which is slender is many-whorled with a simple aperture closed by a horny subspiral operculum. The animal has a very short head, with a long proboscis. Recent species thirty-two, four of them British; fossil 240, from the Silurian period onward. (*Woodward*, ed. *Tate.*)

chi-mól-y-sis, *s.* [Eng. *chem(ic)*, and Gr. λυσις (*lusis*) = loosing, solution.]

Chem.: The resolution of a compound into its constituent elements by chemical means.

chém-ó-lyt'-ic, *a.* [Eng. *chemolys(is)*; *-ic* (comb., and suff. *-ic.*)] Pertaining to or performed by chemolysis.

ché-mo-sis, *s.* [Gr. χημ- (*chēm-*) = inflammation of the eyes, χαος (*chaos*) a yawning, a gaping; χαινω (*chainō*) = gape.]

Med.: An affection in which the conjunctiva, the membrane which lines the posterior surface of the eyelids, is continued over the forepart of the globe of the eye. Frequently lymph or blood is effused with the cellular substance connecting it with the eyeball, and so causes it to be elevated or projected towards the eyelids, giving it the appearance of a gap or aperture along the middle of the eye. The swollen conjunctiva sometimes overlaps the cornea altogether, and there is usually more or less purulent discharge, with severe pain, headache, and feverishness.

chém-ic-o-mé-sis, *s.* [Eng. *chemi(c)*, and *osmosis.*] Chemical action transmitted by osmosis.

chém-ic-o-mét-ric, *a.* [Eng. *chemi(c)*, and *osmotic.*] Pertaining to or effected by chemiosmosis (q.v.).

***chem-ys,** *s.* [CHEWING (2).]

che-nar, *s.* [Native East Indian name.]

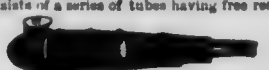
chenar-tree, *s.* Probably the Chinar, *Platanus orientalis* (*Forbes Watson.*)

"Like a *chenar-tree* grove, when winter throws
Over all its tufted heads his feathering snows."
Moore: Lalla Rookh: Inauguration.

chén'-é-vix-ite, *s.* [Named after its discoverer, and Eng. suff. *-ite* (*Min.*).]

Min.: A massive, compact, dark-green mineral from Cornwall, found in quartz rocks in small compact masses. Hardness, 4·5; sp. gr., 3·96. Compos.: Arsenic acid, 32·20—33·5; phosphoric acid, 0—2·30; sesquioxide of iron, 25·10—27·5; oxide of copper, 22·5—31·70; lime, 0—0·34; water, 8·66—12. (*Dana.*)

cheng, *s.* [Chinese.] The Chinese organ, which consists of a series of tubes having free reeds.



CHENG.

It is held in the hand and blown by the mouth. The introduction of this instrument into Europe led to the invention of the accordion and harmonium. (*Stainer & Barrett.*)

che-nille, *s. & a.* [Fr. *chenille* = (1) a caterpillar, (2) fine velvet twist.]

A. *As subst.:* A round fabric or trimming, made by uniting with two or more sets of warps, either by weaving or twisting, a fine filling or weft, which is allowed to project beyond the warps. This filling is cut at its outer edges, and the fabric is then twisted, assuming a cylindrical shape with weft projecting radially from the central line of warps.

B. *As adj.:* (In compounds, as *Chenille-carpet, Chenille-machine*).

***chen-non,** *s.* [CANON.]

chó-nó-cóp-rò-lite, *s.* [Gr. χην (*chēn*) = a goose, and Eng. *coprolite* (q.v.).]

Min.: Dana's name for an impure iron-sinter, also called goose-dung ore. [GANOMATITE.]

chén'-ó-pód, *s.* [CHENOPODIUM.]

1. *Sing.:* A book-name for a plant of the genus Chenopodium, or of the order Chenopodiaceæ.

2. *Pl.* (*Chenopods*): The English equivalent of the Mod. Lat. term Chenopodiaceæ (q.v.).

chén-ó-pód-á-lēs, chén-ó-pód-i-á-lēs, *s. pl.* [From Mod. Lat. *chenopodium* (q.v.), and fem. pl. adj. suff. *-ales.*]

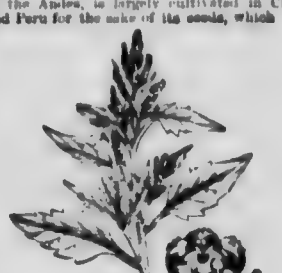
Bot.: An alliance of hypogynous exogens. Lindley includes under it the orders Nyctaginaceæ, Phytolaccaceæ, Amarantaceæ, and Chenopodiaceæ (q.v.)

chén-ó-pód-i-á-çé-æ, *s. pl.* [Mod. Lat. *chenopodi(um)*; Lat. fem. pl. suff. *-aceæ.*]

Bot.: The Goose-foot family, a natural order of Monochlamydeous dicotyledons, characterising Lindley's Chenopodal alliance. The species are inconspicuous herbs or undershrubs, found in waste places in all parts of the world, but abounding in extra-tropical regions. Some are used as potherbs, as spinach (*Spinacia oleracea*), orach (*Atriplex hortensis*, beet (*Beta vulgaris*), &c. The mangold-wurzel is a variety of beet used for the food of cattle. In 1883 there were 74 genera and 533 species known.

chén-ó-pód-i-um, *s.* [Gr. χην (*chēn*) = a goose; ποδιον (*podion*), genit. ποδιου (*podiou*) = a foot.]

Bot.: Goosefoot, a genus of annual and perennial herbs, the typical one of the order Chenopodiaceæ. Chenopods, and chiefly remarkable for the woody character of the species composing it. Perianth five-parted, stamens five, styles two, crowning the ovary, which contains a single round flattened seed. The common Goosefoot is found everywhere. It has triangular leaves, covered with a whitish mealiness, and numerous small flowers in terminal clusters. *C. strigosum* is a tall branched annual, growing four to five feet high. *C. Quinoa*, a native of the Pacific slopes of the Andes, is largely cultivated in Chili and Peru for the sake of its seeds, which are



CHENOPODIUM.
1. Spray with flowers. 2. Details of flower.

extensively used as an article of food. They are prepared either by boiling like rice, or are roasted like coffee, boiled in water, and strained. This brown-coloured broth is called *ecrapalque*, and is a favourite. *C. Bonus-Henricus* is used as a pot herb. *C. Vulvaria* or *olidum*, an evil-smelling plant, is employed as an antispasmodic and emmenagogue. Both the latter species are British.

So says Pliny, but as the cherry grew wild in Greece it is more probable that the town was called from the tree rather than *vice versa*.]

A. *As substantive:*

I. *Ordinary Language, Bot. & Hort.:*

1. The name given to various species of the genus Prunus and sub-genus Cerasus, especially to certain trees which grow wild in America, Europe, and other portions of the Northern temperate zone. (1) *Prunus cerasus*, called also *Cerasus vulgaris*, (2) *P. Avium*, the Gean Cherry, called also the Small Cherry, and (3) *Prunus Padus*, the Bird Cherry or Bird's Cherry, called also the Cluster Cherry and the Fowl Cherry. Bentham and Sir Joseph Hooker consider Nos. 1 and 2 mere varieties or sub-species and not really distinct. From these came the cultivated garden cherry. [CERASUS.] Other species are the Bastard Cherry (*Cerasus Pseudo-cerasus*), the Choke Cherry (*C. virginiana*), &c. [CHOKE, &c.]

2. The drupe or stone-fruit of the cherry-tree. It is a superior one-celled, one-seeded, indehiscent fruit, having a fleshy or pulpy sarcocarp, a hard endocarp, and a pericarp.

3. The name given to various trees with resemblance often superficial to the cherry-tree. *Spec.:* The Barbadoes Cherry (*Malpighia glabra*), the Hottentot Cherry (*Cissus Mundeniæ*), the native cherry of Australia (1) *Exocarpus cupressiformis*, (2) *Nelitris ingens*.

4. A cordial composed of cherry-juice and spirit sweetened and diluted.

II. *Metal.:* A spherical bar, used specially in running out the cavities of bullet-moulds.

B. *As adjective:* Resembling a cherry in colour.

"A *cherry* lip, a passing pleasing tongue."
Marlowe: Richard III., i. 1.

¶ Obvious compound: *Cherry-coloured.*

cherry-bay, *s.* [LAUREL.]

cherry-bird, *s. Oriolus galbulus.*

cherry-bob, *s.* Two cherries, having the stalks united, used by children as earrings and in games.

cherry-bounce, *s.* Cherry-brandy and sugar.

"Burnt brandy very good I hold,
To keep in heat, and force out cold;
And if you chuse to drink it raw,
Mix sugar which it down will draw:
When men together these do flounce,
They call the liquor *cherry-bounce*."
Poor Robin, 1740. (*Nares.*)

cherry-brandy, *s.* A favourite cordial, prepared by steeping freshly-gathered Morello cherries in brandy for one or two months, and then sweetening with powdered sugar or sugar-candy.

cherry-cheeked, *a.* Rosy-cheeked, ruddy.

cherry-crab, *s.*

Bot.: A variety of the Siberian crab, *Pyrus Malus baccata*.

*** cherry-fair, * cherifeire, * chyrye feire,** *s.* A fair for the sale of cherries and other fruit.

"This worlde ye bee a *chyrye feire*."—*Lydgate. Minor Poems*, p. 231.

cherry-gum, *s.* [CERASIN.]

cherry-laurel, *s.*

Bot.: An evergreen shrub, *Cerasus Laurocerasus*, common in nurseries. The leaves have a flavour resembling that of bitter almonds.

3. The quarter or any smaller division of an apple, pear, &c., cut regularly into pieces, the chess or lith of an orange.

II. *Tech.:* The game of chess is of very great antiquity. It was probably invented in China or India, certainly in the East. In India it has been from time immemorial known as *chaturanga*, *i.e.*, the four *angas*, or members of an army, viz.: elephants, horses, chariots, and foot soldiers. This was by the Persians corrupted into *chatrang*, and by the Arabs into *shatrang*. By them it was introduced into Spain in the eighth century, and from thence it found its way into France, and was known in England before the Norman conquest. From the Arabic *shatrang* came the still further corrupted forms *scacchi*, *eches*, and *chess*. In the modern European arrangement the plea of elephants, horses, chariots, and foot soldiers has been abandoned, and, in their places, have been substituted a king, queen, knights, bishops, castles or rooks, and pawns, forming six distinct classes of pieces. [See these words.] The name *rook* is the Hindu *rukh* = an armed chariot; Pers. *rokh*: the *pawns* are the foot soldiers, Hindu *peon* = an attendant. The game is played on a board divided into sixty-four squares, coloured alternately black and white. Each player has sixteen pieces, viz., a king, a queen, two bishops, two knights, two castles or rooks, and eight pawns. The manner of moving each piece is regulated by rule, and the object of each player is to checkmate the other. [CHECK-MATE.]

chicken-pox, *s.*

Path.: The common name for Varicella, a contagious and infectious disease which in some respects resembles modified small-pox, and is characterised by a specific eruption, which breaks out over the whole body, and runs a definite course in about eight or ten days. The disease appears to be the result of a specific poison which, after a period of latency or incubation, develops into one of more or less feverishness. This lasts for two or three days, when an eruption of pimples appears, at first on the body, then on the face and head, the fever subsiding as the rash appears. These pimples soon fill up with lymph, and become vesicles which in their turn, two or three days later, shrivel up and fall off in the form of crusts or scabs, seldom, however, becoming purulent or pitting as in the eruption of small-pox. Chicken-pox appears to have obtained its name partly from the pulse or pea-like (Fr. *chiche*) character of the rash in the first instance, and partly from the mild nature of the complaint as compared with small-pox. Swine-pox, bastard-pox, hives, horn-pox, pearl or stone-pox, are the names popularly given to this disease, according to the character of the eruption, which varies somewhat in different cases. Adults seldom suffer from chicken-pox.

chick-ræs-ú-a, *s.* [A Mod. Lat. form of the Bengalee name.]

Bot.: A lofty Indian tree, belonging to the order Cedrelaceæ. The wood is close-grained, light in colour, and elegantly veined. It is in much request amongst cabinet-makers, by whom it is called Chittagong wood. The bark of *Chickrassia tubularis* is astringent, but not bitter. (*Treas. of Bot.*)

chick'-weed, *s.* [Eng. *chick* (1), and *weed*.] [CHICKEN.]

1. *Bot.*: A plant, *Stellaria media*, the seeds of which are a favourite food of small birds.

2. *Comm.*: A commercial name for the dyeing lichen, *Roccella fuciformis*. (*Craig.*)

Bastard Chickweed: *Sibthorpia europæa*. (*Britt. & Holland.*)

Chickweed Winter-green: *Trientalis europæa*.

Ivy Chickweed: *Veronica hederifolia*. (*Britt. & Holland.*)

Mouse-ear Chickweed: A general book-name for the species of Cerastium, especially *C. triviale*. (*Britt. & Holland.*)

Sea Chickweed: *Honkenya peploides*. (*Britt. & Holland.*)

Water Chickweed: *Montia fontana*; also sometimes applied to *Malachium aquaticum* and *Callitriche verna*. (*Treas. of Bot.*)

***chic-o-ra'-ce-ous**, *a.* [Eng. *chicor(y)*; *-aceous*.] Of the nature of, or having the qualities of chicory.

"Diuretics evacuate the salt serum; as all acid diuretics, and the tasteless and bitter *chicoraceous* plants."—*Sir J. Floyer*.

chic'-o-ry, ***chic'-o-ré**, ***chic'-o-rie**, *s.* [O. Fr. *chicorée*, *cichorée* = succorie (*Cotgrave*); Fr. *chicorie*, from Lat. *cichorium*; Gr. κιχώριον (*kichórion*); κιχορα (*kichóra*) = succory.] [SUCCORY.]

Bot. & Comm.: The root of the *Cichorium Intybus*, Wild Succory or Chicory. The plant is cultivated in various parts of England and Europe and is also raised in California. The roots were formerly used medicinally, possessing properties resembling those of the Dandelion. The root roasted has been employed as a substitute for coffee for more than a century. It is now used extensively as a mixture with genuine coffee, but is regarded as an adulterant, and by the Adulteration Act the seller is bound to acquaint the purchaser

CHICORY.

with the fact that the compound is sold not as genuine coffee, but as a mixture of chicory and coffee. Its presence is easily detected by the microscope, and by the brown colour which is immediately produced when a few grains are thrown into cold water. Chicory root is heated in iron cylinders, which are kept revolving as in the roasting of coffee. In this country about two pounds of lard are added to every hundred-weight of the kiln-dried root during the roasting process. In France butter is used. By this a lustre and colour resembling that of coffee is imparted to it. When roasted the chicory is ground to powder and mixed with the coffee. Chicory contains some saccharine matter, but otherwise does not serve to supply the animal economy with any useful ingredient. Its extensive use sometimes produces diarrhœa. The prepared chicory gives a deep brown color to water, when an infusion is made, and it is this property which makes it valuable for the adulteration of coffee, giving an artificial appearance of strength. As in the case of many other adulterants, chicory itself is sometimes adulterated, the adulterants being roasted pulse, damaged wheat, parsnips, carrots, logwood and mahogany dust, burnt sugar, dog-biscuit, and even baked livers of horses and bullocks. Venetian red and ruddle are used to color it. (*Ure, &c.*)

chí'-oōt (*t* silent), *s.* [Fr.] The seed of a plant, *Moringa pterygosperma*.

chid, *pret.* & *pa. par.* of *v.* [CHIDE.]

chid'-den, *pa. par.* of *a.* [CHIDE.]

chide, ***chyde**, ***chī'-dēn**, ***chydyn** (pa. t. ***chode**, **chid**; pa. par. ***chid**, **chidden**, ***chidde**), *v.t.* & *i.* [A.S. *cídan* (pt. t. *cíde*). Skeat suggests a connection with A.S. *cwedhan* = to speak.]

A. *Transitive*:

1. To find fault with, to reprove, to blame, to correct with words.

(1) *Of human beings*:

"Their mother did also *chide* them for so doing, but still the boys went on."—*Bunyan*: *Pilgrim's Progress*, pt. ii.

(2) *Fig.* (*Of the loud, clamorous noise of animals*):

"He heard the baffled dogs in vain
Rave through the hollow pass amain,
Chiding the rocks that yelled again."
Scott: *Lady of the Lake*, i. 8.

***2.** To drive with reproof, to cause to move by chiding.

"Find him, my lord of Warwick; *chide* him hither."

chief, ***chef**, ***cheffe**, ***cheefe**, ***chefe**, *a.*, *s.*, & *adv.* [O. Fr. *chef*, *chief* = the head, from Lat. *caput*; Sp. *xefe*; Ital. *capo*.]

A. *As adjective*:

1. The principal; the first; the head or highest in authority.

(1) *Of persons*:

"I schal mak him my *chef* stiward."
William of Palerne, 3,808.

(2) *Of things*:

"Then toun that was the *chef* cyte of the lasse Asye."—*Robert of Gloucester*, p. 305.

2. The most important; deserving of the greatest respect, opinion, or attention.

"... my *chief* care
Is to come fairly off from the great debts."
Shakesp.: *Merchant of Venice*, i. 1.

* **3.** Exceeding, extraordinary, very intimate or close.

"A froward man soweth strife, and a whisperer separateth *chief* friends." —*Prov. xvi. 28.*

¶ Formerly the word was used as the comparative and superlative degrees.

"He sometimes denied admission to the *chiefest* officers of the army."—*Clarendon.*

¶ Crabb thus distinguishes between *chief*, *principal*, and *main*: "*Chief* respects order and rank; *principal* has regard to importance and respectability; *main* to degree or quantity. We speak of a *chief* clerk, a commander in *chief*; the *chief* person in a city; but the *principal* people in a city; the *principal* circumstances in a narrative, and the *main* object." (*Crabb: Eng. Synon.*)

B. *As substantive:*

I. *Ordinary Language:*

* **1.** The top, the highest part, the head.

"Upon the *chefe* of hur cholle
A peacok prykette on a polle."
Anturs of Arthur, ix.

2. The head or leader of any number of persons, as of an army, a political or social union, &c.

3. A prime mover or actor; the principal agent.

"I was the *chief* that raised him to the crown,
And I'll be *chief* to bring him down again."
Shakesp.: 3 Henry VI., iii. 3.

II. *Technically:*

1. *Old law:*

(1) Used as a translation of the Latin *caput*. Persons who held their land by personal service direct from the king were called tenants in *chief*, in Latin, *in capite*, in French, *en chef*.

"... licence of alienation to be made of lands holden *in chief*."—*Bacon.*

(2) Applied loosely to the holding of any estate direct from any person.

"I shall be proud to hold my dependence on you in *chief*, as I do part of my small fortune in Wiltshire."—*Dryden.*

2. *Heraldry:*

(1) As the head is the chief part of the man, so the head or principal part of the escutcheon is called the chief, or chief point. It contains the upper third of the field, and is determined by one line, either drawn straight, or *crenellé*, or indented. Sometimes one chief is borne upon another, which is called surmounting, and is usually expressed by a line drawn across the uppermost part of the chief. When a chief is charged with anything it is said to be *on chief*, but when a thing is borne on the top of the escutcheon it is said to be borne *in chief*.

CHIEF.

"The *chief* is so called of the French word *chef* the head or upper part: this possesses the upper third part of the escutcheon."—*Peacham: On Heraldry.*

(2) The chief of an ordinary is a fess removed to the upper part of a coat.

¶ *In chief:*

1. *Law:* [II. 1].

2. *Her.:* [II. 2].

3. First, before all. Used in such compounds as *commander-in-chief*, *general-in-chief*.

¶ Crabb thus distinguishes between *chief*, *leader*, *chieftain*, and *head*: "*Chief* respects precedency in civil matters; *leader* regards the direction of enterprises; *chieftain* is [or rather was once] employed for the superior in military rank; and *head* for the superior in general concerns. Among savages the *chief* of every tribe is a despotic prince within his own district. Factions and parties in a state, . . . must have their *leaders*, . . . Robbers have their *chieftains*, who plan and direct everything, having an unlimited power over the band. The *heads* of families were, in the primitive ages, the *chiefs*, who in conjunction regulated the affairs of state. *Chiefs* ought to have superiority of birth combined with talents for ruling; *leaders* and *chieftains* require a bold and enterprising spirit; *heads* should have talents for directing." (*Crabb: Eng. Synon.*)

† **C.** *As adv.:* Chiefly, especially.

"Than, issuing cheerful to thy sport repair,
Chief, should the western breezes curling play."
Thomson: Spring.

* **chike,** *s.* [CHICKEN.] (*Chaucer.*)

chikˊ-aq, *s.* [The native East Indian name.]

Comm.: The name of a fine cool header composed of sandal-wood, &c. (*Wallace.*)

chilˊ blāin, * **childe-blāin,** * **childˊ-blāne,** *s.* [Eng. *chill*, and *blain* (q.v.).] A blain or sore on the hands or feet produced by cold, especially if the parts were previously much heated. There are three types of the disease. In the first or mildest, there are

redness and swellings, with much heat and itching. In the second st. affected part becomes greatly swelled, and of a red or blue, or even of a purple, hue. In the third, or severest type, vesicles rise on the swollen skin, which become sores, discharging irritating matter. The disease affects young people more frequently than adults, and girls rather than boys. A cure of mild chilblains may sometimes be effected if they be rubbed with snow or ice-water, and finally immersed in it till the pain and itching cease. This should be repeated several times a day, the affected parts being dried and enclosed in leather casings.

"I remembered the cure of *chilblaines* when I was a boy which many he called the children a gouth, by burning at the fire." —*Sir W. Temple.*

†chil-blain, *v.t.* [CHILBLAIN, *s.*] To affect with chilblains; to raise chilblains upon.

child, ***cil** (1), ***childe,** ***chylde** (*Eng.*) (pl. **childre,* *...re, **childir,* **chyldere,* **childire,* *children*), § ***eil** (*Scotch*), *s.* & *a.* [A.S. *cild* (pl. *cild* and *cildru*). Matzner and Mahn compare Goth. *kilthei* = a womb, *in-kilthô* = with child. Skeat refers to Dut. and Ger. *kind* = a child.]

A. *As substantive:*

I. *Ordinary Language:*

1. *Literally:*

(1) A descendant in the first degree, whether male or female; a son or daughter.

(2) Extended to more remote descendants.

"Then saith the Lord, Behold, a *child* shall be born unto the house of David, . . ."—*1 Kings* xiii 2.

(3) Applied, in the plural, especially in Scripture, to all the members of a race.

" . . . the *children* of Reuben and the *children* of God and the half tribe of Manasseh, built there an altar by Jordan"—*Josh* xxii 10.

(4) A young girl. (Obsolete, except in the provinces, and especially in Warwickshire.)

"Mercy on 's, a barne; a very pretty barne! A boy or a *child*, I wonder?"—*Shakesp.: Winter's Tale,* iii. 3.

(5) A young person generally, irrespective of any relationship or connexion.

" . . . and his flesh came again like unto the flesh of a little *child*, and he was clean."—*2 Kings* v. 14.

†(6) [CHILDE.]

"And every *childe* ware of leaves grene
A fresh chapelet."
Chaucer: Flower and Leaf.

*(7) A servant, a page. (*Scotch.*)

(8) A fellow, a person, irrespective of age. (*Scotch.*)

"They're fools that slavery like, and may be free;
The *chiels* may a knit up themselves for me"
Ramsay: Poems, ii. 77.

2. *Figuratively:*

(1) *Relig.*: Child of God

(a) One owned by God as His child.

"Ye are all the *children* of God by faith in Christ Jesus"—*Gal* iii. 26.

(b) A baptized Christian

"In Baptism, wherein I was made a member of Christ, the *child* of God . . ."—*Church Catechism.*

(c) One who exhibits the character of a child, applied to

(i) One who is weak in knowledge. (*Isaiah* liii. 12, *1 Cor.* xiv. 20.)

(ii) One who is young in grace. (*1 John* ii. 13.)

(iii) One who is humble, docile, and obedient as a child. (*Matt* xviii. 3, 4.)

(2) One who in manners or disposition exhibits the characteristics of a very young person; one who is innocent or ignorant as a child.

(3) Used as a term of endearment, or affection.

"*Children*, how hard is it for them that trust in riches to enter into the kingdom of God!"—*Mark* x. 24.

†(4) The result, product, or effect of anything.

" . . . the noble passion,
Child of integrity, hath from my soul
Wiped the . . . scruples . . ."
Shakesp.: Macbeth, iv. 3.

¶ The plural was originally *cild* or *cildru*, and afterwards *childer, childir, childire,* &c. The later addition of the plural suff. *-(e)n* consequently makes the modern *children* really a double plural.

"Ye *childer* he had."—*Langtoft,* p. 19.

¶ The word occurs frequently in Scripture, in phrases with little more meaning than *persons* or *people* attached or belonging to some specified class; as, *children of the flesh* = those whose affections are set on the world; *children of the promise* = those to whose ancestors the promise had been made; *children of wrath* = those liable to the wrath of God; *children of disobedience* = disobedient persons, &c.

¶ *To be with child:*

1. *Lit.*: To be pregnant.

"Therhuyle that he is *mid childe*."—*Ayenbite,* p. 204.

*2. *Fig.*: To be very anxious for anything.

"I send my boy, with a like mynself, *is with child* to see any strange thing."—*Pepys: Diary,* May 14, 1660.

From a child: From infancy

"He that delicately bringeth up his servant *from a child* shall have him become his son at the length."—*Prov.* xxix. 21.

II. *Law*: Under seven a child is supposed to be incapable of committing felony. Between seven and fourteen it is held to be *doli incapax*, *i.e.* incapable of crime, whilst above fourteen it is *doli capax*, *i.e.* capable of crime. If, however, anything atrocious be done with obvious malice by a child, it may be held that *malitia supplet ætatem*, malice supplies [the want of] age. The age at which a child can be sworn as a witness depends on the education it has received and its apparent comprehension of the nature and obligation of an oath.

B. *As adj.*: (See the compounds).

child-bearing, ***child-beringe,** *a.* & *s.*

A. *As adj.*: Bearing or bringing forth children.

B. *As substantive:*

1. The act of bearing children.

"To thee,
Pains only in *childbearing* were foretold."
Milton P. L. x.

2. The quality of being able to bear children.

"The timorous and irresolute Sylvia has demurred till she is past *childbearing*."—*Addison.*

3. The period of gestation.

"The period of *child-bearing* in women, which is 280 days, is usually spoken of by the ancient writers as consisting of ten months."—*Lewis: Astronomy of the Ancients* (ed. 1862), ch. i., § 4, p. 21.

child-crowing, *s.*

Med.: The name popularly given to an affection of the larynx, of which the most remarkable feature is a peculiar crowing or hissing sound caused by the breath being drawn with more or less violence into the windpipe in the effort to remove some impediment, which is usually of a spasmodic character, existing in that organ. The disease is peculiar to childhood, and is caused by reflected irritation from worms, teething, and other disorders upon the muscles of the larynx, through the recurrent laryngeal and pneumogastric nerves. The symptoms, which are those of impending suffocation, are most alarming and must be relieved instantly, but the attack is seldom fatal. Child-crowing, technically called *laryngismus stridulus* (q.v.), is also known as false-croup, from its resemblance in some respects to that disease. True croup is, however, quite a distinct affection, and a much more formidable one.

"There is a sort of bastard croup . . . Spasmodic croup . . . the most common of its names . . . My late colleague, Dr. Ley, in a volume upon this curious disorder . . . adopts from Dr. Mason Good the appellation of Laryngismus stridulus. Dr. Gooch called it *Child-crowing*, a homespun term which I much prefer."—*Watson: Principles and Practice of Physic,* lect. xlvi.

***child - gered,** *a.* [Eng. *child*, and *geared.*] Of childish manners.

"He wats sumquat *child-gered*."
Towneley Mys. 86.

2. (*With an idea of contempt*): Puerile, trifling.

"They have spoil'd the walls with *childish* sentences, that consist often in a jingle of words."—*Addison: On Italy.*

¶ Crabb thus distinguishes between *childish* and *infantine*: "What children do is frequently simple or foolish; what infants do is commonly pretty and engaging; therefore *childish* is taken in the bad and *infantine* in the good sense. *Childish* manners are very offensive to those who have ceased, according to their years, to be children; the *infantine* actions of some children evince a simplicity of character." (*Crabb: Eng. Synon.*)

† **ch̨ild'-ish-ly,** *adv.* [Eng. *childish*; *-ly.*] In a childish or puerile manner; like a child.

* **ch̨ild'-ish-mind'-ed,** *a.* [Eng. *childish*; *minded.*] Childish in disposition; simple, innocent.

* **ch̨ild-ish-mind'-ed-ness,** *s.* [Eng. *childishminded*; *-ness.*] Childishness in character or disposition; simplicity.

"I have somewhat of the French: I love birds, as the king does; and have some *childishmindedness* wherein we shall consent."—*Bacon.*

ch̨ild'-ish-ness, *s.* [Eng. *childish*; *-ness.*]

1. *In a good sense:* The state of being a child; simplicity of manners or disposition; innocence, harmlessness.

"He cares not for your weeping. Speak thou, boy:
Perhaps thy *childishness* will move him more
Than can our reasons."
Shakesp. Coriol., v. 3.

2. *In a bad or at least contemptuous sense:* Puerility; weakness of intellect.

"His cowardice, his *childishness*, his pedantry, . . . made him an object of derision."—*Macaulay: Hist. Eng.*, ch. i.

* **ch̨ild'-kind,** *s.* [Eng. *child*, and *kind* = kin.] Children collectively.

"All mankind, womankind, and *childkind* . . . pity the fool."—*Carlyle: Life of Sterling*, pt. ii., ch. vi.

"Quanne is *childles* of werlde fare."
Genesis and Exodus, 220.

ch̨ild'-less-ness, *s.* [Eng. *childless*; *-ness.*] The state of being childless, or without offspring. (*E. Everett.*)

* **ch̨ild'-li,** * **ch̨ild'-ly,** * **ch̨ilde-ly,** *a.* & *adv.* [A.S. *cildlic.*] [CHILDLIKE.]

A. *As adj.:* Childlike.

"In *childly* wyse on her he gan to smyle."
Lydgate: Fall of Princes, ii. 22.

B. *As adv.:* In a childlike manner, like a child.

"Then she smiled around right *childly*."
Mrs. Browning: Lady Geraldine's Courtship.

ch̨ild'-like, *a.* [A.S. *cildlic*, from *cild* = child, and *lic* = like.]

1. *Of persons:* Resembling a child in disposition or manners; simple, innocent, dutiful, meek.

"such was thy wisdom, Newton, *childlike* sage!
Sagacious reader of the works of God."
Cowper: Task, iii. 228.

2. *Of things:*

(1) *In a good sense:* Becoming or befitting a child: innocent, harmless, dutiful.

(2) *In a bad or contemptuous sense:* Puerile, foolish, trifling.

¶ Usually *childlike* is used in a good sense, *childish* in a bad sense.

* **ch̨ild'-ness,** *s.* [Eng. *child*; *-ness.*] The manners or actions natural to a child: childishness.

"My parasite, my soldier, statesman, all:
He makes a July's day short as December,
And, with his varying *childness*, cures in me
Thoughts that would thick my blood.
Shakesp. Winter's Tale, i. 2.

ch̨il'-drē-ite, *s.* [Named after the mineralogist, Mr. Children, of the British Museum.]

Min.: An orthorhombic, translucent mineral, of a yellowish-white to brownish-black colour. Hardness, 4·5—5; sp. gr. 3·13—3·24. Lustre vitreous, inclining to resinous. Compos: Phosphoric acid, 23·92; alumina, 14·4; protoxide of iron, 30·66; protoxide of manganese, 9·07; magnesia, 0·14; water, 16·93. It occurs in Devonshire, Cornwall, and the United States. (*Dana.*)

* **ch̨il'-drēn-less,** * **ch̨yl-drem-les,** *a.* [Eng. *children*, and *-less.*] Childless.

"If th' one be riche and *childrenles*; though all the grounde of strife
Proceede of hym, yet thee in facte, and pleade his cause for lyfe.
Drant: Prosse of Horace, sat. i. (Nares.)

* **ch̨ild'-ship,** *s.* [Eng. *child*; *-ship.*] Relationship as a child.

"God's actual choice and our potential *childship*."—*Adams: Works*, iii. 101.

ch̨ild'-wife, *s.* [Eng. *child*, and *wife.*]

1. A wife who is still almost a child in years. (In this sense rather a compound than a single word.)

* 2. A wife who has borne a child.

"But the law saith doth openly discharge and deliver this holy *childwife* from the bane of the law . . ."—*Paraphrase of Erasmus*, 1548. (Nares.)

* **ch̨ild'-wīt,** * **ch̨ild'-wite,** *s.* [Eng. *child*, and Mid. Eng. *wite* = a fine.]

ch̨il-i ŏm'-ē-tĕr, *s.* [KILOMETRE.]

ch̨il-i ō-phyl'-lŭm, *s.* [Gr. χιλιάς (*chilias*) = a thousand, and φύλλον (*phullon*) = a leaf.]

Bot. A genus of composite plants with yellow flowers. They are natives of Mexico.

ch̨ill, * **ch̨il,** * **ch̨ele,** *s.* & *a.* [A.S. *ciele* = great cold, chilliness, from *celan* = to cool, *cōl* = cool; but *Kill* = a chill, *kele* = to chill, *koel* = cool; Sw. *kyla* = to chill, *kulen*, *kylig* = chill, cool; Lat. *gelu* = frost.] [COOL, CHELE.]

A. *As substantive:*

I. *Ordinary Language:*

1. *Literally:*

(1) The state of being moderately cold; chilliness.

(2) A sudden sensation of coolness, generally accompanied with shivering; a sudden check to the circulation of heat.

Chills and fever: Fever and ague. (*U.S.*)

2. *Fig.:* A sudden check to warmth of manner or feeling; a discouragement.

II. *Technically:*

1. *Painting:* A dullness or dimness in a painting; also called *blooming.*

2. *Iron Manuf.:* A piece of iron introduced into a mould so as to rapidly cool the surface of molten iron which comes in contact therewith. Cast-iron, like steel, is hardened by rapid cooling, and softened by the prolongation of the cooling process. The existence in a former direction gives elasticity and hardness of hardened steel; the existence in the direction of softness is obtained by annealing the heat, abstracting the carbon from the cast-iron, reducing it to a low degree crystalline iron. [MALLEABLE IRON.]

The chilled cast iron plough-share has a hard under-surface, and the top wears away, leaving a comparatively thin edge of hardened metal. This resembles the natural provision in the teeth of rabbits, squirrels, and other rodents whereby the enamel remains in advance of the softer portion of the tooth, keeping a sharp edge. (*Knight.*)

B. *As adjective:*

I. *Literally:*

1. *Subjec.:* Having a sensation of coolness; somewhat cold.

2. *Objec.:* Moderately cold; causing a sensation of coolness, generally accompanied with shivering; chilly.

II. *Figuratively:*

1. *Subjec.:* Cold and reserved in manners, temper, or feeling; distant, formal.

"But he is chill to praise or blame."
Prolegom.: The Two Voices.

2. *Objec.:* Causing a discouragement to or checking warmth of feeling or manners; depressing, discouraging; distant, formal.

"Downward and ever downward, and deeper in age's chill valley."
Longfellow: Children of Lord's Supper.

¶ Crabb thus distinguishes between *chill* and *cold:* "*Chill* expresses less than *cold*, that is to say, it expresses a degree of cold. The weather is often *chilly* in summer; but it is *cold* in winter. We speak of taking the *chill* off water when the *cold* is in part removed; and of a *chill* running through the frame when the *cold* begins to penetrate the frame that is in a state of warmth." (*Crabb: Engl. Synon.*)

chill-cold, *a.* Very cold.

"A *chill-cold* blood . . . flowes through my veines."
Lodge: Rosa's Moor, p. 69. (*Davies.*)

chill-hardening, *s.* A mode of tempering steel-cutting instruments, by exposing the red hot metal to a blast of cold air.

chill, * **chyl-lyn,** *v.t.* & *i.* [Chill, *a.*]

A. *Transitive:*

I. *Ordinary Language:*

1. *Literally:*

(1) To make cold or chilly; to strike with a chill.

". . . when a body is said to be *chilled* . . ."—*Tyndall: Prog. of Science* (3rd ed.), viii. 2, p. 178.

† (2) To blast with cold.

". . . by snows inamoi'rate *chill'd*."
Blackmore.

2. *Fig.:* To check warmth of feeling or manners; to discourage, to depress; to damp the spirits.

"As an icy touch had *chill'd* its heart."
Hemans: A Tale of the Secret Tribunal.

II. *Iron Manuf.:* To cause the surface of molten iron to cool suddenly by the introduction of a piece of cold iron, so as to increase the hardness. [Chill, *a.*, B. 2.]

† **B.** *Intransitive:*

1. *Lit.:* To become cold, to shiver.

2. *Fig.:* To become cold, distant, or formal in manners or feeling; to be discouraged, disheartened, or downcast.

"Al chaunged her chere and *chylled* at the hert."
Allit. Poems: Patience, 207.

chilled, *pa. par.* & *a.* [Chill, *v.*]

A. *As pa. par.:* (See the verb).

B. *As adjective:*

* 1. *Ord. Lang.:* Chill, cold.

"He said, and Priam, a aged joints with *chilled* fear did shake." *Chapman.* (Rich.)

2. *Technically:*

(1) *Iron Manuf.:* Made of iron which has been hardened by chilling. Chilled castings are used for axle boxes, iron wheel-hubs, rolls for iron-rolling mills, ploughshares, and mould-boards, stamp-heads, heavy hammers, and anvils for some kinds of work, and in many other instances. (*Knight.*)

(2) *Painting:* Dimmed, clouded; affected with blooming.

chilled-shot, *s.*

Mil.: Shot of very rapidly cooled or chilled cast-iron, which thus acquire a hardness of nearly equal efficiency with steel for penetrating iron plates, and yet produced at a very much less cost. Chilled-shot break up on passing through the plates, and the fragments are very destructive on crowded decks.

chil-li, *s.* [Sp. *chile, chili.*]

1. The popular name of the American Red-pepper.

2. The pod or fruit of the Capsicum (q.v.). *Spec.*, the dried ripe pod of *Capsicum fastigiatum.*

"*Chillies* . . . form the basis of Cayenne pepper and curry powder."—*Illustrated Exhibitor and Magazine of Commerce.*

Chilli (or **chili**) **vinegar:** Vinegar flavoured with capsicum pods.

chilli (or **chili**) **sauce,** *s.* A spicy condimental sauce, variously composed.

chil'-li-nĕss, *s.* [Eng. *chilly; -ness.*]

I. *Literally:*

1. The quality or state of being chilly.

"The *chilliness* of their nature."—*Locke: Education*, pt. ii.

2. Coolness; a moderate degree of cold.

II. *Fig.:* A sensation of discouragement or depression.

chil'-lĭng, * **chyl-lyng,** *pr. par., a., & s.* [Chill, *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As substantive:*

I. *Ordinary Language:*

(1) The act of cooling or making chill (*lit. & fig.*).

* (2) The act or state of shivering.

"*Chyllynge* of tothe or other lyks. *Pripiter.*"—*Promptl. Parv.*

2. *Iron Manuf.:* The process of chill-hardening. [Chill, *a.*, II. 2.]

Chill'-lĭng-hăm, *s.* [A proper name, see A.]

A. *As substantive:*

Geog.: A parish in Northumberland, on the river Till, about four and a half miles south of Wooler.

B. *As adj.:* In any way pertaining to or connected with the parish described under A.

Chillingham bulls, Chillingham cattle, *s. pl.* Certain bulls, or rather cattle of both sexes, preserved in a semi-wild state in Chillingham Park. They are pure white, except the muzzle, which is black, and the horns, which are tipped with black. The white colour on the body, however, is artificially produced, the owner causing all spotted calves to be killed. They are now generally believed to be the descendants of the mountain bull or Urus which were wild in Gaul at the time of Cæsar's invasion, and the stock whence our larger cattle have been derived. Some writers have thought them descended from ordinary cattle which have become wild, and others have made them a distinct species, *Bos Scoticus.* Professor W. Boyd Dawkins considers them the last surviving representatives of the gigantic Urus of the Pleistocene period, reduced in size and modified in every respect by their small range and their contact with man. (*Q. J. Geol. Soc.*, vol. xxii. (1866), pt. i., p. 398.)

† **chĭll'-lĭng-lȳ,** *adv.* [Eng. *chilling; -ly.*] In a chilling manner.

". . . a qualification which must then have fallen *chillingly* on the ears of belligerent Tories."—*Daily News*, April 19, 1879.

* **chĭll'-nĕss,** * **chĭl'-nĕss,** * **chĭl'-nĕsse,** *s.* [Eng. *chill; -ness.*]

1. *Lit.:* A sensation of coldness, a chill.

"Lend their weaker fire
To conquer the night's *chillnesse*."
Harington: Castara, p. 11.

2. *Fig.:* A feeling of discouragement or depression.

chĭll'-ȳ, *a.* & *adv.* [Eng. *chill; -y.*]

A. *As adjective:*

I. *Literally:*

1. Feeling a sensation of coldness or chilliness.

"Sir Charles, I'm as *chilly* as a bottle of port in a hard frost."—*Colman the younger: The Poor Gentleman*, iv 1.

2. Causing a sensation of coldness or chilliness.

"A *chilly* sweat bedews
My shudd'ring limbs."
Philips.

II. *Fig.:* Cold in manners, distant, cool.

† **B.** *As adv.:* In a chill or cool manner (*lit. & fig.*).

chī-lō'-năr-pŭs, *s.* [Gr. χείλος (*cheilos*) = a lip, and καρπος (*karpos*) = a fruit.]

Bot.: An imperfectly known genus of climbing plants, natives of Java, having a salver-shaped corolla, capitate stigma, and capsular fruit. The genus is referred to the Apocynaceæ. (*Treas. of Bot.*)

chĭl-ō-chlō'-ē, *s.* [Gr. χειλός (*cheilos*) = fodder, and χλόη (*chloë*) or χλόα (*chloa*) = young grass.]

Bot.: A genus of plants of the order Gramineæ, allied to Phleum and Phalaris.

chī-lō'-dī-ē, *s.* [Gr. χείλος (*cheilos*) = a lip, and ὁδούς (*odous*) = a tooth.]

Bot.: A genus of Labiatæ, consisting of a single species from New Holland. It is a branched glaborous or slightly pubescent shrub. In habit and structure the genus is very near Prostanthera, differing only in having no appendages to the anther cell. (*Treas. of Bot.*)

chī'-lō-dŏn, *s.* [Gr. χείλος (*cheilos*) = a lip, and ὀδούς (*odous*), genit. ὀδοντος (*odontos*) = a tooth.]

Zool.: A genus of Infusoria, of the family Trachelina, having the body covered with cilia, mouth with teeth arranged in the form of a tube; fore part of the head produced into a broad membranous or ear-like lip. The cilia form longitudinal rows. (*Greff & Houfton.*)

chī-lō-glŏs'-sĭa, *s.* [Gr. χείλος (*cheilos*) = a lip, and γλῶσσα (*glōssa*) or γλῶττα (*glōtta*) = a tongue.]

Bot.: A small genus of terrestrial Australasian orchids, bearing radical leaves in pairs, and solitary paleate reddish flowers.

chī-lŏg năth'-ĭ-form, *a.* [Eng. *chilognath*, and *form.*]

Entom.: A term applied to the larvæ of those coleopterous insects which are herbivorous, elongated, and sub cylindrical, and resemble the genus Julus.

chi lŏg năths (*Eng.*), **chi ŏg na-thes, chi lŏg na thes** (*Mod. Lat.*), *s. pl.* [Gr. χείλος (*cheilos*) = a lip, and γνάθος (*gnathos*) = a jaw.]

1. *Entom.:* An order of the Myriapoda, or Centipedes, distinguished by having the two mandibles and the tongue so united as to form a large lower lip; antennæ short with six or seven joints, body convexly cylindrical, legs short and slender. The segments of the body, from the fourth, fifth, or sixth from the head, have each of them two pair of legs. It contains the Millepedes and Galley worms. At least seventy species are known. The order is also called Diplopoda. They are found beneath the bark of trees and in humid places, and feed both upon animal and vegetable productions.

2. *Paleont.:* The order began, as far as is known, in the Carboniferous period.

chil-ō-gram, *s.* [Kilogram.]

† **chī-lō'-mę,** *s.* [Gr. χείλωμα (*cheilōma*) = a lip, rim, or edge. (*Septuagint.*)]

Zool.: The upper lip of a mammal when it is tumid, and continued uninterruptedly from the nostril. A good example of this may be seen in the camel.

chī lŏm'-ō-năs, *s.* Gr. χείλος (*cheilos*) = a lip, and μόνας (*monas*) = single, solitary.]

Zool.: A genus of Infusoria, of the family Monadina, free swimming or temporarily fixed; mouth oblique or lateral, and surmounted by a lip; there are two flagella, one of which is convolute and adherent.

Chi lō'-nĭ an, Chi lŏn' ĭc, *a.* [From Lat. *Chilo*), and Eng. suff. *-ian, -ic.*] Relating to Chilo, one of the seven sages of Greece. (*Smart in Worcester.*)

1. *Entom.:* An order of Myriapoda or Centipedes, the genera of which have elongated antennæ, with fourteen to forty or more joints, a depressed body covered with coriaceous plates, and legs of variable length. Each segment of the body has a single pair of legs. The order contains the Centipedes proper as distinguished from Millepedes, &c. It is sometimes called also Syngnatha. Nearly 100 species are known. They all run fast, are carnivorous, and nocturnal. They are principally found beneath stones, the bark of trees, and in loose, humid earth.

2. *Paleont.:* No species of the order has yet been found fossil.

chil ō pŏd i form, *a.* [Eng. *chilopod*, *-i-* connective, and *form.*]

Entom.: A term applied to the larvæ of Coleopterous insects which are subhexapod, with a long, linear, depressed body, and bear no resemblance to the genus Scolopendra. (*Kirby & Spence: Entomology*, III. xxix. p. 166.)

† chil-ō-pōd'-mor-phous, *a.* [Eng. *chilopod*; *-o-* connective; Gr. μορφη (*morphē*) = form; Eng. suff. *-ous.*] The same as CHILOPODIFORM (q.v.).

"These [larvæ] being the most perfect *chilopodimorphous* of the whole."—*Kirby & Spence*: Entomology, III. xxix., p. 166.

chi-lōp'-o-dis, *s.* [Gr. χειλος (*cheilos*) = a lip, ὁψ (*ops*), genit. ὀπος (*opos*) = face, appearance.]

Bot.: A genus of Bignoniaceæ, consisting of a single species of erect branching shrubs from Mexico. It has long linear entire alternate leaves, and beautiful flowers in terminal, dense, spicate racemes. (*Treas. of Bot.*)

Chil'-tērn, *s.* & *a.* [A proper name, see A.]

A. *As substantive*:

Geog.: The name of certain beech-clad hills in Buckinghamshire, formerly infested by robbers. To keep these in check, a functionary was appointed, who was called Steward of the *Chiltern Hundreds* (q.v.).

B. *As adj.*: Pertaining to, or in any way connected with, the hills described under A

Chiltern hundreds, *s.* A hilly district in Buckinghamshire, belonging to the Crown. The office of Steward of this district, although the duties have long ceased to be more than nominal, is still retained for a special purpose. No Member of Parliament is allowed to resign his seat, and if he wishes to vacate it he can only do so by accepting some office of profit under the Crown. The Stewardship of the Chiltern Hundreds is therefore applied for by any member desiring to retire, and its acceptance necessarily vacates his seat.

chil'-tŏn-ite, *s.* [Etymol. doubtful. Apparently named after a Mr. Chilton.]

Min.: The same as Prehnite (q.v.).

chi-mæ'-ra, *s.* [Lat. *chimæra*; Gr. χιμαιρα (*chimaira*) = (1) a she-goat, (2) a fire-spouting monster with a lion's head, a serpent's tail, and a goat's body, killed by Bellerophon.] [CHIMERA.]

1. *Myth.*: [CHIMERA].

2. *Ichthy.*: A genus of fishes, the type of the family Chimæridæ, having the tail ending in a slender thread, the head pointed, and spirade single. *Chimæra monstrosa* is sometimes called the Sea-monster, and sometimes the King of the Herrings. It is a native of the Northern Seas, from which it straggles to Britain and follows shoals of herrings as they move from the deep sea towards the shore. [CHIMÆRIDÆ.]

chi-mær'-i-dæ, *s. pl.* [Lat. *chimæra(e)*; fem. pl. suff. *-idæ.*]

1. *Ichthy.*: A family of cartilaginous fishes, distinguished by the head being furnished with appendages, and the tail terminating in a point. It contains two species, Chimæra and Callorhynchus.

2. *Paleont.*: The Chimæridæ begin with the Devonian rocks.

chi-mær'-oid, *a.* & *s.* [Lat. *chimæra*; and Gr. εἰδος (*eidos*) = form, appearance.]

A. *As adj.*: Pertaining to, or resembling the Chimæridæ.

B. *As subst.*: A fish belonging to the family Chimæridæ, or akin to Chimæra.

"In the Mesozoic and Kainozoic deposits, the remains of *Chimæroids* are not extremely rare, but they consist only of the jaws and teeth, along with fin-spines or ichthyodorulites."—*Nicholson*: Paleont., ii. 155.

chi-măph'-il-ē, *s.* [Gr. χειμα (*cheima*) = winter, and φιλεω (*phileō*) = to love; from the leaves retaining their green colour during winter.]

Bot.: A small genus of Pyrolaceæ, natives of Europe, Siberia, and North America. The plants, called Winter-greens in America, have woody subterranean shoots, and a short stem with a tuft of thick, shining, evergreen leaves, oblong, wedge-shaped, or lanceolate. The pedicels are one-flowered, bearing handsome bell-shaped, white flowers, tinged with purplish-red, and very sweet-scented. (*Treas. of Bot.*) *Chimaphila umbellata* is a most active diuretic. *C. maculata* is used in North America in strangury and nephritis. (*Lindley.*)

chi-măph'-i-lin, *s.* [Mod. Lat. *chimaphil(a)*; *-in.*]

Chem.: The name given to the tasteless, inodorous crystals found in the leaves of *Chimaphila umbellata.*

chi măr rhis, *s.* [Gr. χειμαρρος (*cheimarros*) = a torrent; from the plant growing on the banks of torrents.]

Bot.: Riverweed, a genus of white-wooded American trees, belonging to the order Rubiaceæ. The wood is used for beams and rafters.

*** ȼhimb, * ȼhymbe,** *s.* [A.S. *cim*, found in *cimelm* = a base; Sw. *kim*, *kimb*, *kimme*; Dut. *kim*, *kimme.*]

1. *Coopering*: The edge of a cask or tub, formed by the ends of the staves.

"The stream of lyf now droppeth on the *chymbe*."
Chaucer: C. T., 12,035.

2. *Naut.*: That part of the waterway which is left above the deck, and hollowed out to form a channel.

*** ȼhim-bléy,** *s.* [CHIMNEY.]

chi-a-bō-rā'-ite, *s.* [From Chimborazo, where it is found, and Eng. suff. *-ite* (*Min.*).]

Min.: The same as ARAGONITE (q.v.).

ȼhime (1), * ȼhimbe, * ȼhymbe, * ȼhymme, *s.* [A corruption of *chimbale* or *chymbale*, a dialectic form of O. Fr. *cimbale* or *cymbale* = a cymbal; Lat. *cymbalum*; Gr. κυμβαλον (*kumbalon*).]

A. *Ordinary Language*:

I. *Literally*:

* 1. A cymbal; probably used also for a bell. (See extract.)

"As a *chymbe* or a bremes bolle."
Cursor Mundi, 12,193.

2. The harmonic or consonant sound of several instruments or bells. [B. I.]

† **II.** *Figuratively*:

1. Harmonised sounds of any instrument of music:

"The Minstrel waked his harp—three times
Arose the well known martial *chimes*
Scott: *The Lady of the Lake*, iii. 7

2. Any sound in harmony or accord.

"A happy *chime* of many dancing feet"
Tennyson: *Pauline*

3. A correspondence in sound or proportion.

"Life and time
Ring all their joys in one dull *chime*."
Scott: *The Bridal of Triermain*, iii. 2.

B. *Technically*:

1. *Music*:

(1) A number of bells attuned to each other in diatonic succession. A peal consists of three or more bells in harmonic succession, which may be rung successively or simultaneously, but will not admit of a tune being played upon them. Thus a set embracing the eight notes of the common scale will constitute a chime, while a set upon the first, third, fifth, and eighth of the scale would be a peal. The smallest number of bells that can be said to constitute a chime is five, but the number may be increased indefinitely. The usual number is at least nine, which number embraces the eight notes of the natural scale, with the addition of a flat seventh. Apparatus for ringing chimes is said to have been first made at Alost, in East Flanders (Belgium), in 1487. Pottheff, the chime-player of Amsterdam, in the latter part of the 18th century, played pianoforte music with facility. Each key required a force equal to two pounds' weight. (*Knight.*)

(2) An arrangement of bells and strikers in an organ or musical box, operated in harmony with the reeds, pipes, or tongues, as the case may be.

chime-barrel, *s.*

Horol.: A prolongation of the rim of a striking-wheel, which is furnished with pins, like the barrel of a musical-box, the pin lifting the tails of the hammers, which are set on one axis and strike their respective bells when set in motion.

chime-bell, * chymbe belle, *s.* A bell or set of bells harmonised.

"His *chymbe belle* he doth tyrage"
Alexander, 1,602.

ȼhime (2), *s.* [CHIME.]

*** ȼhime (3),** *s.* [CHINE.]

ȼhime, * ȼhi-men, * ȼhy-myn, * ȼhimbe, *v. i.* & *t.* [CHIME (1), *v.*]

A. *Intransitive*:

I. *Literally*:

1. To sound in harmony or accord; to give out a sound in harmony, as bells, they meanwhile remaining unmoved. It is opposed to ringing, in which the bell is raised, i.e. swung round. (*Skinner & Barrett.*)

2. To cause bells to ring in harmony or accord.

"Chymers of chenken wythe bellys. Florida: *Promptorium Parvulorum*.

II. *Figuratively*:

* 1. To correspond or accord in relation or proportion.

"Father and son, husband and wife and . . . correlative terms, do belong . . . to . . . through custom, do readily *chime* and answer one another, in proper a memorium." *Jeremy*.

2. To agree, suit, or accord with.

"Any work whose remarkings, interpretation, and language, I have been used to, will of course best *chime* that way . . ."—*Locke*.

3. To join or fall in with in accord . . . or interfere in a conversation . . . often . . . by *in with*.

"He not only sat quietly and heard his father read, but often *chimed in* with the discourse . . ."—*Smollett*: *History of John Bull*.

* 4. To make jingling rhymes.

* 5. To clatter, to chatter

"The only tongs may wel rynge and *chymbe*
Of wrenchedness that passeth ony pryse."
Chaucer: C. T., 7,438.

† 6. To give utterance to any harmonious sounds.

"Before the song of those who *chimed* were
After the *chiming* of the eternal spheres."
Longfellow: *Dante*: *Purgatorio*, xxx. xxii.

B. *Transitive*:

I. *Literally*:

1. To play a tune on bells, either by machinery or by hand, by means of hammers or swinging the clappers, the bell remaining unmoved. It is opposed to ringing in which the bells are raised, that is, swung round. (*Skinner & Barrett.*)

2. To cause to sound in harmony

* **II.** *Fig.*: To utter harmoniously

"Let simple Wordsworth *chime* his childish lore,
And brother Coleridge lull the babe asleep . . ."
Byron: *English Bards & Scotch Reviewers*.

"And his feet [were] like to latoun as in a brennynge *chemney*."—*Wycliffe: Rev.* i. 15.

2. A fire-place, a stove, a hearth.

"A *chimney* of charcole to chaufen the kayghte."
Anturs of Arthur, xxiv.

3. The flue, vent, or passage through which the smoke escapes from the fire into the open air.

4. A tube of glass placed over the flame of a lamp to increase the draught, improve the combustion, and protect the flame.

5. The portion of the flue standing above the roof. [CHIMNEY-SHAFT.]

II. *Hist.:* Down to the thirteenth century, the people seem to have been generally destitute of chimneys. The open hole for the emission of smoke is referred to in Herodotus, vii. 137:—"Now it happened that the sun was shining down the chimney into the room where they were; . . . the boy, who had a knife in his hand, made a mark with it round the sunshine on the floor of the room." In the Middle Ages people made fires in their house in a hole or pit in the centre of the floor, under an opening formed in the roof, and when the family lay down for the night for it can hardly be said that they went to bed—the hole was closed by a cover of wood. The laws of the feudal ages (*couvre-feu* of the French; curfew-bell of the English) ordered that such fires should be extinguished at a certain time in the evening. William I. introduced this law into England in time, and fixed the *ignitegium* at seven in the evening. The law was abolished by Henry I. in 1100. Chimneys, in the modern sense, were not common before the reign of Elizabeth. Thus Harrison, in his *Description of England* (ed. Furnivall), i. 338, says: "Now have we manie chimnies; and yet our tenderlings complaine of rheumes, catarrhs, and poses [colds in the head]; then had we none but reredosses [open hearths]; and our heads did never ake." A tax, called Chimney-money (q.v.), was imposed on each hearth or stove in a house in the reign of Charles II., and was abolished in the reign of William and Mary.

The following are the names of the various parts of the chimney: The opening into the room is the fireplace. The floor of the fireplace is the hearth. The paved portion in front of the hearth is the slab. At the back of the fireplace is the fire-back. The flaring sides of the fireplace are the covings. The vertical sides of the opening, a part of the wall of the apartment, are the jambs. The chimney-piece is the ornamental dressing around the jambs and mantel. The entablature resting on the latter is the mantel. The mantel-shelf, or mantel-piece, rests thereupon. The whole hollow space from the fireplace to the top of the wall is the funnel, or chimney-hood. The contracting portion of the funnel is the gathering. The narrowest part is the throat. The throat is closed (at times) by a damper. Above this is the flue. The wall above the mantel against the flue is the breast. The chimney above the roof is the shaft. This, in England, is usually surmounted by a chimney-pot, and that frequently by a hood, vane, or cowl. A cluster of chimneys is a stack. A chimney-board closes the fireplace in summer. A viper-tunnel is a false chimney placed on a house as an ornament or to balance things. (*Knight.*)

B. *As adjective:* (See the compounds).

chimney-arch, *s.* An arch turned over the fireplace.

chimney-board, *s.* A piece of board used to close up the fireplace in summer.

chimney brace, chimley-brace, *s.* The mantel-shelf. (*Scotch.*)

chimney-can, *s.* A chimney-pot.

chimney-cap, *s.*

1. An abacus or cornice forming a crowning termination for a chimney.

2. A device to render more certain the expulsion of smoke, by presenting the exit aperture to leeward, or by a rotatory device. [COWL.]

chimney-cheeks, chimley-cheeks, *s. pl.* The jambs of a chimney-piece.

chimney-collar, *s.* A device to prevent the leakage of rain around a chimney-stack where it protrudes through a roof. The slates or shingles lie upon the slanting plates, and upright plates lie closely against the bricks.

chimney-flue, *s.* [CHIMNEY, 3.]

chimney-hook, *s.* A hook suspended in a chimney from which to hang pots over the fire.

chimney-jack, *s.* A rotating chimney-head; a kind of revolving cowl.

chimney-jambs, *s. pl.* The jambs of the fireplace. [JAMB.]

*** chimney-man,** *s.* An officer appointed to collect chimney-money.

*** chimney-money,** *s.*

Old Law: A tax paid for each chimney in a house. It was imposed by Act 14, Chas. II., c. 2, which enacted that every hearth and stove of every dwelling-house, "except such as pay not to church and poor, should pay two shillings per annum at Michaelmas and Lady-day." The tax was abolished in the reign of William and Mary. It was also called HEARTH-MONEY.

chimney neuck, chimley neuck, *s.* [Eng. *chimney*; Scotch & Prov. Eng. *chimley*, and *neuck* = nook.] The corner of the fire-place; the fireside.

chimney-piece, *s.* The ornamental frame round a fireplace, consisting of jambs and mantel.

chimney-plant, *s.*

Bot.: *Campanula pyramidalis.*

chimney-pot, *s.*

1. *Lit.:* A tube of pottery or sheet-metal, used to carry up a flue above the chimney-shaft. They are sometimes ornamental, and made to agree in design with the character of the building.

2. *Fig.:* A gentleman's hat, so called from its shape and colour. (*Slang.*)

chimney-shaft, *s.* The portion of the chimney carried up above the roof.

chimney-swallow, *s.*

Ornith.: A species of swallow, *Hirundo rustica*, so called from its selecting chimneys, outhouses, ruins, &c., as the favourite sites for its nests. The forehead and throat are of a reddish-brown.

"The martin arrives in this country a little later than the *chimney-swallow*."—*E. Lucas: Popular History of British Birds.*

chimney-sweep, *s.*

1. *Ord. Lang.:* A man whose occupation it is to clean the flues of chimneys of the accumulated soot.

2. *Bot.* (*pl. Chimney-sweeps*): The same as CHIMNEY-SWEEPER, II. 2.

chimney sweeper, *s.*

I. *Ordinary Language:*

1 *Literally:*

(1) A chimney-sweep.

"To look like her are *chimney-sweepers* black."
Shakesp.: Love's Labour's Lost, iv. 3.

(2) A machine for sweeping chimneys. It was invented in England by Smart, 1805, to supersede the climbing boys, who were so cruelly treated. A brush of rattan is fixed on the end of a rod which consists of jointed sections of cane.

* 2. *Fig.:* Used proverbially for any one of a mean occupation.

"Golden lads and girls all must,
As *chimney-sweepers*, come to dust."
Shakesp.: Cymbeline, iv. 2.

II. *Technically:*

1. *Law:* The 28 Geo. III. c. 48, and 4 and 5 Wil. IV., which passed on 25th July, 1834, regulated the occupation of chimney-sweepers and their apprentices, as well as providing for the safer construction of chimneys and flues. It prohibited the apprenticing of children under ten years old to chimney-sweepers.

2. *Botany:*

(1) The heads of *Plantago lanceolata*. (*Britt. & Holland.*)

(2) *Luzula campestris*. (*Britt. & Holland.*)

Chimney-sweeper's Cancer:

Med.: A disease, also called Soot-wart, or *Cancer scroti*.

chimney-top, *s.*

1. *Ord. Lang.:* The top of a chimney; a chimney-cap or cowl, a chimney-pot.

"Many a time and oft
Have you climbed up to walls and battlements,
To towers and windows, yea, to *chimney-tops*."
Shakesp.: Julius Cæsar, i. 1.

2. *Music:* In organ building, a metallic mouthpipe whose otherwise closed upper end has an open tube of small dimension, which allows a part of the air to escape and has the effect of sharping the note. [MOUTH-PIPE.]

chimney-valve, *s.* A device of Dr. Franklin for withdrawing the foul air from an apartment by means of the upward draft in the chimney. In its simplest form it consists merely of a metallic frame fitted in an aperture in the chimney and having a suspended flap opening inwardly to the chimney which allows a current to pass in that direction, but shuts off a down-draft into the room.

chi-mo-nan-thus, *s.* [Gr. χειμων (*cheimōn*) = winter, and ἄνθος (*anthos*) = a flower; in reference to its early flowering.]

Bot.: A genus of plants belonging to the Calycanthus family, and consisting of a single species, the Japan Allspice, *Chimonanthus*

progrens, wolf known in gardens for its early flowering and the sweet scent of its blossoms. It was introduced from China in 1766. It is a much-branched shrub, and is generally treated as a wall plant in gardens. The flowers are scentless, about an inch in diameter, made up of a large number of pale yellow, waxy petals arranged in several rows. They appear in mild winters about Christmas, and last for a long time. (*Treas. of Bot.*)

chim pan'-zee, * chim pan'-zé, *s.* [Fr. *chimpanzé*, from the native Guinea name.]

Zool.: The popular name of either of the two species of anthropoid apes of the genus Anthropithecus, from tropical Africa. (The generic name Troglodytes formerly used for these animals must be dropped, as it properly belongs to a genus of birds.) The chimpanzees are large, semi-arboreal anthropoids, with very long arms, and can assume a nearly erect posture, though when on the ground their favourite mode of progression is a kind of shambling canter. The Common Chimpanzee (*A. troglodytes*) is the best known species; of the other, the Ashy Chimpanzee, *A. calvus* (assumed to be the *Troglodytes calvus* of Du Chaillu), only two examples have yet (1893) been brought to Europe. One of these, the famous "Sally," lived in the Gardens of the Zoological Society, Regent's Park, for a period of eight years. (*Proc. Zool. Soc.*, 1865, p. 673; 1880, p. 316.)

A. *As substantive:*

1. The lower portion of the face below the under lip.

2. Conversation; particularly emphatic or offensive rejoinder, or idle talk. (*U.S. Slang.*)

B. *As adj.:* (See the compounds.)

chin-cloth, *s.* The same as CHIN-CLOUT (q.v.).

"A cap which they fasten with a very broad *chin cloth*."—*Mission Travels in E.* p. 90.

*** chin-clout,** *s.* A cloth or muffler formerly worn round the chin by women.

"And from the *chin-clout* to the lowly slipper
In Meliconian streams his praise shall dip [*sic*]."
John Taylor Works (1630), p. 111.

† chin-deep, *adv.* Very deep, almost overwhelmed.

"To fancy himself *chin-deep* in riches."—*Lamb: Essays of Elia*, ser. ii., No. 10.

chin-scab, *s.* A disease in sheep.

chin strap, *s.*

1. *Ord. Lang.*: A strap of a cap or hat passing under the chin.

2. *Saddlery*: A strap connecting the throat-strap and nose-band of a halter.

*** chin-welk,** *s.* A disease, also called *Mentagra* (q.v.).

chin, *v.i.* To talk idly, emphatically, or offensively. (*U. S. Slang.*)

Chī'-na, *s.* & *a.* [The name of a country in the extreme east of Asia, constituting one of the largest empires in the world. Excluding its dependant islands, it extends from lat. 20 to 41°, or even to 46° N. lat., and from 98°, or even 85° to 96° E. long.; being thus from 1,400 to 2,000 miles long, by 900 to 1,300 broad, with an area of about 1,534,953 square miles, or with its dependencies, 3,924,627 square miles. Its population is stated to be 425 millions.]

A. *As substantive:*

1. *As a proper name*: The country referred to in the etymology.

Chinese architecture. The architecture of China had its rise from Indian art introduced with the worship of Buddha. But varieties of treatment soon appeared, and a model of the Indian dagoba arose a tower-like superstruction of many storeys, growing gradually smaller towards the top, and with each stage distinctly marked, and covered with many-coloured curved roofs, to which bells were attached. These edifices were, for the most part, octagonal, and were consecrated for religious purposes. Chinese architecture have nothing durable about them, wood forming an essential element in their construction. They are more remarkable for their elegance and slender proportions than for size. The roofs are especially characteristic, the most striking peculiarities being that they are always curved, and have figures on them, high relief, as well as at the corners, from which hang bells, and that they are decorated with fantastic embellishments, such as dragons, &c. The Chinese do not possess the art of producing large spaces, and consequently numerous columns are introduced for the support of the ceilings and roofs; these are of wood, sometimes carved, but always painted. (*Longperier*, &c.)

Chinese balance, *s.* A form of the steelyard having four points of suspension, not as many quadrated sides to the weight-arm of the lever. [STEELYARD.]

Chinese blue, *s.* A mixture of ultramarine, or of cobalt blue, with flake white. (*Weale.*)

The simpler forms are *chhit* = chintz, a spot; *chhitki* = a small spot, a speck; *chhitná* = to scatter, to sprinkle: Mod. Dut. *sits* Ger. *zits.* (*Skeat.*)] A cotton cloth gaily printed with designs of flowers, &c., in five or six different colours. It was a favourite ... the time of Queen Anne, long before cotton prints became cheap. The name, being highly respectable, has since been applied to goods lacking the graceful and artistic character of the genuine article. The chintzes of the Coromandel coast were celebrated in the time of Marco Polo, thirteenth century. They are mentioned also by Odoardo Barbosa, a Portuguese who visited India soon after the passage of the Cape of Good Hope by Vasco da Gama: —"Great quantities of cotton cloths admirably painted, also some white and some striped, held in the highest estimation."

"Let a charming *chintz*, and Brussels lace,
Wrap my cold limbs, and shade my lifeless face."
Pope: Moral Essays. i. 248.

chi-ō-cŏc'-cŏs, *s.* [Gr. *χιών* (*chiōn*) = snow; *κοκκος* (*kokkos*) = a berry.]

1. An edged tool for cutting wood, iron, or stone. It is operated by striking its upper end with a hammer or mallet, or by pressure.

¶ Some of the "celts" found in Europe in pre-historic times may have been used as chisels. Chisels were known also to the ancient Egyptians. The form of the tool used in carpentry is familiar: one used in turnery has the cutting edge in the middle: the thickness: one used in metallurgy has the upper part flat for receiving the blow of the hammer, and the lower part in the form of a wedge for penetrating iron plates or bars

2. By metonomy, used for the art of a sculptor.

". . . embellished by the pencil of Verrio and the *chisel* of Gibbons."—*Macaulay: Hist. Eng.*, ch. xx.

¶ There are numerous varieties of chisels, adapted to the requirements of various trades, as, for instance, *calking-chisel, chopping-chisel*, &c., which will be found in their places.

chisel-draft, *s.*

Masonry: In squaring the end of a stone block, one edge is chisel-dressed to a straight edge and forms a base for the determination of the other sides.

¶ *Chisel in Marteline:* A long cutting-chisel used by marble-workers. It is furnished with steel points at the end. [MARTELINE.]

***chis-el** (2), *** chese-el, * chese-ylle, *chyz-el** (2), *s.* [A.S. *cisil, cesel, ceasl*; O.H.Ger. *chisil*; Sw. & Dan. *kisel.*] Gravel, shingle.

"Chesel, or grauel. *Arenus* (*arena*, F.) *sabulum.*"—*Prompt. Parv.*

chis-el, *v.t.* [Fr. *ciseler.*] [CHISEL (1), *s.*]

I. *Lit.:* To cut, grave, or pare away stone, &c., with a chisel.

C. *As subst.:* Chattering, noise of birds.

"Pale dyuynyng bi *chitteryng* of birddis."—*Wycliffe: Numb* xxiv. 1. (*Purvey.*)

*** chit'-face**, *a.* [CHITTYFACE.]

chī-tine, *s.* [From *chit(on)* (q.v.), and suff. *-ine* (*Chem.*).]

Chem.: $C_9H_{13}NO_5$. The horny substance which gives firmness to the tegumentary system and other parts of the crustacea, arachnida, and insects; probably also the carapace of the rotatoria consists of it. It is left when the above structures are exhausted successively with alcohol, ether, water, acetic acid, and alkalies, retaining the original form of the texture. It is dissolved by concentrated mineral acids without the production of colour. It is not dissolved by solution of potash, even when boiling; neither does it give the characteristic reactions with Millon's or Schultze's tests. It contains nitrogen. (*Grif. & Henfrey.*)

chī-tin-ous, *a.* [Eng. *chitin(e)*; *-ous.*] Of the nature of chitine.

chī-tŏn, *s.* [Gr χιτών (*chitōn*) = (1) an under garment, (2) a coat of mail.]

1. *Ord. Lang.:* A robe.

2. *Zool.:* A genus of Molluscs, the shells of which are boat-shaped, and consist of a series of symmetrical plates, folding over each other, and implanted in the mantle or zone of the animal. It is the typical genus of the family Chitonidæ or Chitons. The species occur in all climates. More than 200 recent species are known, and thirty-seven fossil, the latter from the Silurian period onward.

CHITON.

"The *Chitons* attaches itself to the rock by a muscular sucker or foot, which, extending ventrally along its entire length, resembles that of the slug or snail and enables it to crawl."—*Miller: Old Red Sandstone*, ch. xii.

chī-tŏn-ăl'-lĭa, *s.* [From *chiton* (q.v.), and Lat. dim. suff. *-ella.*]

Zool.: A genus of Cyclobranchia, in which the body is larvæform: the plates are small and detached, the mantle is naked, and the seeds have punctures resembling spiracles. Ten recent species are known, and one fossil, the latter from the Carboniferous rocks of Scotland.

chī-tō'-nī-ą, *s.* [Gr. χιτών (*chitōn*) = a coat of mail (the seeds being covered with arilli), and Lat. neut. pl. suff. *-ia.*]

Bot.: A genus of West Indian shrubs of the family Melastomaceæ, some species of which in this country serve as ornamental stove-plants. They form shrubs or small trees, and have opposite, ovate, acute, five-nerved leaves, and terminal panicles, with three-flowered branches. They are natives of Mexico.

chī-tŏn'-i-dæ, *s. pl.* [From *chiton* (q.v.), and Lat. fem. pl. suff. *-idæ.*]

Zool.: A family of Gasteropods, affording the only known instance of a protecting shell formed of many portions or, as they have been sometimes but incorrectly termed, valves, often in contact and overlapping each other, but never truly articulated. The species are numerous and widely spread. The fossil species are rare.

Chit'-ta-gŏng, *s.* [A district in the south-east of Bengal.] The name of a fowl originally brought from the district mentioned in the etymology.

Chittagong-wood, *s.* The timber of several Indian trees, especially of *Cedrela Toona* and *Chickrassia tabularis.*

chit-tĕr, *v.i.* [CHATTER, *v.*]

1. To chirp in a tremulous or shivering manner (in this sense perhaps onomatopoetic).

"The fethered sparowe cald I am;
In swete and pleasant spring,
I greatly doe delight, for them
I *chirter*, chirp, and sing."
Kendall: Flowers of Epigrams. (Nares.)

2. To shiver, to tremble. (*Scotch.*)

"Where wilt thou cow'r thy *chittering* wing?"
Burns: A Winter Night.

3. To chatter. Used of the teeth striking against each other, as by cold.

chit'-tĕr-ling, * chyt'-tĕr-ling, *s.* [Of obscure origin.]

1. (*Generally in pl.*): The smaller intestines of swine, &c., cooked for food by frying.

"A gut or *chitterling* hanged in the smoke."—*Barret.*

*2. A ruff or frill to a shirt (so called because when ironed out it resembles the small entrails).

*3. A little child [as if it were a diminutive from chit (1)].

*** chitten**, *s.* [CHIT (1).] See extract.

"Lenticula is a poults called *chitten*, which . . . I translate posson."—*Udal: Apoph. of Erasmus*, p. 162.

*** chit'-ting**, *pr. par.* or *a.* [CHIT, *v.*]

*** chit'-ty**, *a.* [Eng. *chit* (1); *-y.*]

1. Full of sprouts or shoots; germinating.

2. Childish, babyish.

*** chit-ty-face**, *a.* [Prob. not from *chitty*, but a corruption of "*chicheface.* A chicheface, nicher sneakebill, wretched fellow, one out of whose nose hunger drops" (*Cotgrave*).] Lean, unseemly-looking.

*** chi-vache, * chi-vach-le**, *s.* [CHEVACHIE.]

chiv-al-ric, chi-văl'-ric, *a.* [Eng. *chivalry*; *-ic.*] Chivalrous.

". . . his mind, naturally of a *chivalric* and warlike bent. . . ."—*Major Porter: Knights of Malta*, ch. i.

chiv'-al-rous, * chiv-alc-rous, *a.* [O. Fr. *chevalereux*; Sp. *caballeroso.*] [CHIVALRY.]

1. Pertaining or relating to chivalry.

"And noble minds of yore allied were
In brave pursuit of *chivalrous* enterprise."
Spenser: Faery Queen.

2. High-spirited, gallant, noble

". . . his *chivalrous* spirit would not suffer him to decline a risk . . ."—*Macaulay: Hist. Eng.* ch. v.

chiv'-al-rous-ly, *adv.* [Eng. *chivalrous*; *-ly.*] In a chivalrous, gallant manner.

chiv'-al-ry, *chev-al-rye, *chev-al-roe, * chiv-al-ric, * chyv-al-ric, * chyv-al-rye, *s.* [O. Fr. *chevalerie*; Sp. *caballeria*;

Ital. and Port. *cavalleria*. The same word as CAVALRY (q.v.).]

I. *Ordinary Language:*

*1. The deeds or exploits of a knight; valour in arms.

"There hadde he don gret *chyvalrie*."
Romaunt of Rose, 1,397.

*2. The dignity of knighthood.

"There be now, for martial encouragement, some degrees and orders of *chivalry* . . ."—*Bacon: Essays.*

3. The system, practices, or usages of knighthood generally.

"The faith which knights to knighthood have,
And whate'er else to *chivalry* belongs."
Dryden: Palamon & Arcite, i. 109.

4. A body or number of knights collectively. [CAVALRY.]

"He was made kyng of Fraunce by assent of alle the *chyvalrie*."—*Trevisa*, i. 293.

*5. Warfare, arms.

"As one unfit therefore, that all might see
He had not trayned bene in *chevalree*."
Spenser: F. Q., II. iii. 46.

*6. An army, generally including foot-soldiers as well as cavalry, the former apparently being considered not worth mentioning.

"Phicol, the prince of his *chyualrye*."—*Wycliffe: Genesis* xxi. 22.

*7. An exploit, a deed of arms, an advantage.

"They fear doing acts more dangerous, though less famous, because they were but private *chivalries*."—[illegible]

8. Men actuated by a chivalrous spirit; brave gentlemen.

"Her Beauty and her *Chivalry*, and bright
The lamps shone o'er fair women and brave men."
Byron: Childe Harold's Pilgrimage, iii. 23.

II. *Technically:*

1. *Hist.:* The rise of chivalry has been placed by some as late as the crusades, but at that time it was in an advanced stage of development. From the 9th to the 12th century, a "miles," that is, one bearing a designation which in classical times meant simply a soldier, and in the mediæval period a knight, was one who held land or fee from a superior, and was in consequence bound to render him military service. When a young man who was heir to these responsibilities came of age enough to formally pledge himself to discharge them honourably, a ceremony of investiture took place. The Church, as was natural and right, sought to add solemnity to the interesting event, and made the investiture of a youthful knight an imposing religious ceremony, holding up, moreover, before him a high moral and religious ideal to which he was exhorted to aspire. Mercy to vanquished foes and purity in the youthful knight's relations to women were earnestly pressed upon him; and there was undoubtedly more of both than if the Christian Church had not interfered. Yet withal the ages of chivalry were marked to a frightful extent by cruelty and impurity. Whilst the Church counselled and poets celebrated the religious and moral elevation of the true knight, that individual himself manifested little of either; his principles and his practice were wonderfully different. Chivalry declined and fell with the feudal system, of which it was a normal growth. The institution of the military orders, the Knights Templars, the Knights of St. John, and the Teutonic Knights, was an interesting development of chivalry. To a certain extent also it has a place in the present, its ceremonies being retained in the creation of modern knights, though some of them are all but meaningless. But whatever in the days of its vigour it effected in making society braver, more compassionate, and more pure, created for it a title to gratitude which should never pass away.

* 2. *Law:* A tenure of land by knight's service; also called tenancy *in chief*, or *in capite*. [CHIEF, B., II. 1.]

"*Servitium militare*, of the French *chevalier*; a tenure of land by knight's service. There is no land but is holden mediately or immediately of the crown, by some service or other; and therefore are all our freeholds, that are to us and our heirs, called *feuda*, fees, as proceeding from the benefit of the king. As the king gave to the nobles large possessions for this or that rent and service, so they parcelled out their lands, so received for rents and services, as they thought good: and these services are by Littleton divided into *chivalry* and socage. The one is martial and military; the other clownish and rustick. *Chivalry*, therefore, is a tenure of service, whereby the tenant is bound to perform some noble or military office unto his lord: and is of two sorts; either regal, that is, such as may be of only the king: or such as may also hold of a common person as well as of the king. That which may hold only of the king, is properly called serjeantry; and is again divided into grand or petit, i.e. great or small. *Chivalry* that may hold of a common person, as well as of the king, is called scutagium."—*Cowel.*

¶ *Tenure in Chivalry:* Tenure on condition of rendering knight's service. [II. 2.]

¶ *Court of Chivalry:* A court formerly held before the Lord High Constable and Earl Marshal of England, having cognisance of contracts and other matters relating to deeds of arms. (*Blackstone*, bk. iii., ch. v.)

* **chiv-an, chiv-on,** *s.* [? The same as Chevin = chub.] Occurring only in the phrase to *play the chivon* = to run away precipitately.

"Go play the *chivon*, the stranger then said."
Robin Hood & Cousin Scarlet.

***chive** (1), *s.* [SHIVE.] A chip.

"If any *chive*, chip or dust chip into the eye . . . it will incarnate upon the tunicle."—*Burrough: Method of Physick*, 1661. (*Nares.*)

chive (2), *s.* (Generally used in the plural.) [Fr. *ciboi*, from Lat. *cepa*, *cæpa*, *cæpe* = an onion.]

*1. *Bot.:* A name formerly given to the filaments of flowers.

"The prolific seed contained in the *chives* or apices of the stamina."—*Ray: Wisdom of God.*

2. *Hortic.:* A small species of onion, *Allium Schænoprasum*, which grows in tufts. The bulbs have the odour of garlic, and are used in soups and stews, but to a very little extent.

chive-garlic, *s.* [CHIVE (2).]

* **chiv-el, * chy-vel,** *v.t.* [Etym. doubtful.] Stratmann suggests Prov. Eng. *chivel* = a slit or rent.] To shake, to tremble.

"Was choken . . . *chyuelid* for olde."
Langland: P. Plowman, 2,005.

* **chiv-er,** *v.t.* [SHIVER.]

chiv-et, *s.* [A dimin. of *chive* (2), s. (q.v.).] (For definition see extract.)

"*Chivets*, are the small parts at the Roots of Plants, by which they are propagated."—*Miller: Gardener's Dict.*

chiv-i-a-tite, *s.* [Named from *Chiviat(o)*, in Peru, where it occurs, and Eng. suff. *-ite* (*Min.*) (q.v.).]

Min.: A mineral of a lead-grey colour, with metallic lustre, and resembling bismuth-glance. Compos.: Sulphur, 17·76; bismuth, 62·96; lead, 16·72; copper, 2·56. Sp. gr., 6·920. (*Dana.*)

* **chiv-y,** *v.t.* [A corruption of *chevy chase.*] To chase. (*Slang.*)

"I've been a *chivied* and a *chivied* fust by one on you and nixt by another on you." —*Dickens: Bleak House*, ch. xlvi.

chlad-nite, *s.* [From Chladni, who wrote on meteorites; *-ite.*]

Min.: A variety of Enstatite (q.v.) found in meteorites, and containing little or no iron. (*Dana.*)

chlæ-nā-çē-æ, *s.pl.* [Gr. χλαῖνα (*chlaina*) = a cloak, from the flowers being furnished with an involucre; and Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: A small family consisting of only four genera, of one or two species each, all from the island of Madagascar, and as yet but very imperfectly known. They are trees or shrubs with the habit, alternate leaves, stipules, and terminal inflorescence of some Sterculiaceæ, of which they have also the free petals, monadelphous stamens, and anthers. Included by Lindley in his Geranial alliance. (*Treas. of Bot.*, &c.)

chlæ-ni-ïs, *s.* [Gr. χλαῖνα (*chlaina*) = a cloak.]

Entom.: A genus of Coleopterous insects, of elegant forms, and generally of green hues. The legs and antennæ of many of the species are of a pale-yellow colour, as also the outer margin of the elytra. Four species are British.

chlăm-ȳd-ăn'-thūs, *s.* [Gr. χλαμύς (*chlamus*) = a cloak, and ἄνθος (*anthos*) = a flower.]

Bot.: A name now applied to a section of the genus Thymelæa, in which the tubular calyx remains attached after withering, and encloses the nut. The plants embraced in this section are low woody-stemmed bushes, chiefly natives of the Mediterranean regions.

chlăm-yd'-ō-ōtis, *s.* [Gr. χλαμύς (*chlamus*), genit. χλαμύδος (*chlamudos*) = a cloak; *-osis.*]

Bot.: Pertaining to the floral envelope of a plant.

chlăm-ȳ-dŏd'-ēr-ą, chlăm-ȳd-ēr-ą, *s.* [Gr. χλαμύς (*chlamus*), genit. χλαμύδος (*chlamudos*) = a cloak, and δέρη (*derē*) = the neck.]

Ornith.: A genus of birds, family Starnidæ (q.v.). *Chlamydodera maculata* is the spotted Bower-bird of Australia. [BOWER-BIRD.]

chlăm-ȳd'-ō-dŏn, *s.* [Gr. χλαμύς (*chlamus*) = a cloak, and ὀδούς (*odous*), genit. ὀδόντος (*odontos*) = a tooth.]

Zool.: A genus of Infusoria of the family Euplota. Furnished with cilia and a cylinder of teeth, but neither styles nor hooks.

chlăm-ȳd-ō-săn'-rĭa, *s.* [Gr. χλαμύς (*chlamus*), genit. χλαμύδος (*chlamudos*) = a cloak, and σαῦρος (*saurus*) = a lizard.]

Zool.: A genus of Saurians, founded on a specimen, *Chlamydosaurus Kingii*, found in Careening Bay, Port Nelson, Australia, in 1820. In colour it is yellowish-brown, variegated with black. Head depressed with the sides erect, leaving a blunt ridge on the upper part wherein the eyes are placed. Toes long, compressed, scaly, and very unequal; claws hooked and horn-coloured; neck covered with small scales, and furnished with a large plaited frill, rising from each ear. Each frill has four plaits which converge on the under part of the chin, and fold it up on the side, and a fifth where the two are united in lower part of the neck. Length, 22½ inches.

chlăm-ȳ-dō-thēr'-ĭ-ŭm, *s.* [Gr. χλαμύς (*chlamus*), genit. χλαμύδος (*chlamudos*) = a cloak, and θήριον (*thērion*) = a wild animal.]

Palæont.: A mammal of the order Edentata, found in late Pliocene or Post-tertiary deposits of South America.

chlăm-ȳ-ph-ō-rĭa (*Mod. Lat.*), **chlăm-ȳ-phore** (*Eng.*), *s.* [Gr. χλαμύς (*chlamus*) = a cloak; and φόρος (*phoros*) = bearing, φέρω (*pherō*) = to bear.]

Zool.: A genus of Mammals of the order Edentata, consisting of a single species, *Chlamyphorus truncatus*. It resembles the Mole in some respects, and in others the Beaver or Sloth. Its length is 5½ inches. The body is covered with a shell of a consistence somewhat more dense and inflexible than sole-leather, of an equal thickness, and consisting of a series of plates of a square, rhomboidal, or cubical form, each row containing fifteen to twenty-two plates. The superior semicircular margin of the truncated surface, together with the lateral margins of the shell, are beautifully fringed with silky hair.

chlăm'-ys, *s.* [Gr. χλαμύς (*chlamus*) = a cloak.]

*1. *Mil.:* A military cloak or mantle, worn especially by horsemen.

CHLAMYS (FROM APOLLO BELVEDERE IN VATICAN).

2. *Entom.:* A genus of Coleopterous insects, belonging to the sub-tribe Cyclica, and the family Chrysomelidæ.

chlō-nā'-çē-æ, *s. pl.* [CHLÆNACEÆ.]

chlī-dăn'-thūs, *s.* [Gr. χλιδή (*chlidē*) = softness, delicacy, and ἄνθος (*anthos*) = a flower.]

Bot.: A genus of South American amaryllids, having truncated bulbs, linear-lorate leaves, sheathing at the base developed after the flowers, and a scape (one and a half feet high) supporting an umbel of a few large fragrant flowers. (*Treas. of Bot.*)

chlō-ăn'-thēs, *s.* [Gr. = budding, sprouting.]

Bot.: A genus of Verbenaceæ from extra-tropical New Holland, consisting of undershrubs thickly covered with opposite or ternate, sessile, linear, and revolute leaves, and having solitary axillary flowers with short peduncles.

chlō-ăn'-thīte, *s.* [Gr. χλοανθής (*chloanthēs*) = budding, sprouting, from its reticulations, and Eng. suff. *-ite* (*Min.*) (q.v.).]

Min.: A variety of Smaltite (q.v.), occur-

ring at Chatham, Connecticut, in mica slate. (*Dana.*)

chlō-ăs'-mă, *s.* [From Gr. χλοάζω (*chloazō*) = to be pale-green; χλόος (*chlŏos*) = pale green.]

Med.: A discolouration of the human skin which occurs in greenish or yellowish-brown patches, and for the most part on those portions of the body which are covered by clothing. The affection is due to a fungus or confervoid, *Microspora furfur.*

chlō'-ē-l-ē, *s.* [Gr. χλόη (*chlŏē*) = the young shoots of grass, &c.]

Zool.: A genus of Annelida, belonging to the order Dorsibranchiata, in which the head is furnished with five tentacula, and the branchiæ resemble a tripinnate leaf.

chlōr-, *pref.* [CHLORO-.]

chlōr'-ă, *s.* [Gr. χλωρός (*chlōros*) = green.]

Bot.: An annual herbaceous plant, well marked among Gentianaceæ by its eight-cleft flowers and eight stamens. *Chlora perfoliata*, called Yellow-wort, the only British example, is a singularly erect, slender plant, about a foot high, with but few root-leaves. The whole plant is perfectly smooth, and of a decided glaucous hue. The flowers, which are rather large, and of a delicate clear yellow, expand only during the sunshine, like the genus Erythræa, to which Chlora is allied. The whole plant is intensely bitter, and may be employed with advantage as a tonic; it also dyes yellow. It is common in chalky pastures, especially near the sea.

chlōr-ăc'-ĕt-āte, *s.* [Eng. *chloracet(ic)*; *-ate.*]

Chem.: A salt of chloracetic acid.

chlōr-ă-sĕt'-ĭc, *a.* [From Eng., &c. *chlor(ine)*, and *acetic* (q.v.).] Derived from chlorine and acetic acid.

chloracetic acid, *s.*

Chemistry:

Monochloracetic acid, $CH_2Cl.COOH$, is obtained by the action of chlorine on boiling glacial acetic acid. It boils at 186°, and solidifies at 44°. Soluble in water, and is gradually decomposed when the aqueous solution is boiled. Heated with KHO it is converted into potassium glycollate, $KC_2H_3O_3$.

Dichloracetic acid, $CHCl_2COOH$, is formed by the action of chlorine on monochloracetic acid. It boils at 195°.

Trichloracetic acid, CCl_3COOH, is obtained by the action of excess of chlorine on glacial acetic acid in direct sunlight, or by oxidation of chloral hydrate with chromic acid or with nitric acid; also synthetically by the action of Cl and H_2O on C_2Cl_4 carbon dichloride. It is a colourless acid deliquescent substance. Nascent hydrogen reduces it to acetic acid. Boiled with excess of ammonia it yields ammonia carbonate and chloroform. By PCl_5 it is converted into trichloracetyl chloride, $Cl_3CO.Cl$.

chlōr-ă-sĕt'-ōne, *s.* [Eng. *chlor(ine)*; and *acetone.*]

Chem.: Acetone in which hydrogen has been replaced by chlorine. *Monochloracetone*, $CH_2Cl.CO.CH_2Cl$ is prepared by the action of hypochlorous acid on acetone. It is a colourless liquid, boiling at 119°.

chlōr-æ-ă, *s.* [Gr. χλωρός (*chlōros*) = green.]

Bot.: An extensive genus of terrestrial orchids, exclusively found in the southern districts of South America. Their roots are coarse, fascicled, glutinous fibres. The leaves are all radical. The scape is clothed with thin herbaceous sheaths. The flowers grow in spikes or racemes in the manner of the Green Orchis, are greenish, whitish, or yellow, occasionally marked by deep brown specks. Some thirty or forty species are known, none of which are in cultivation. (*Treas. of Bot.*) It is thought in Chili that *Chloræa disoides* promotes the flow of milk.

chlōr'-ăl, *s.* [From Eng., &c. *chlor(ine)*; *-al.*]

Chem.: C_2HCl_3O or $CCl_3.CO.H$ = trichloraldehyde. Chloral is a colourless, odorous, oily liquid, boiling at 94°. It is soluble in water, alcohol, and ether. Sp. gr., 1·502. It is obtained by passing chlorine gas through absolute alcohol. By the action of caustic potash it is decomposed into chloroform and formate of potassium. It changes on keeping into a solid white modification, reconverted into a liquid by heat. With water it forms a crystalline compound called hydrate of chloral, $CCl_3.HC(OH)_2$. It is used to adulterate beer.

chloral hydrate, *s.*

Pharm. (*Chloral Hydras*): A white crystalline substance, forming a neutral aqueous solution if free from HCl. Its solution in chloroform, when shaken up with sulphuric acid, remains colourless if no oily impurities are present; 100 grains of hydrate of chloral dissolved in an ounce of distilled water and mixed with thirty grains of slaked lime should yield, when carefully distilled, not less than seventy grains of chloroform. Chloral is used in medicine in the form of a syrup. It produces sleep, but only acts as an anodyne during sleep, the pain returning as soon as the patient wakes. The habitual use of this drug is followed by profound melancholy and enfeeblement of will, and muscular lassitude and suicidal insanity. It was discovered by Dr. O. Liebreich.

chlōr'-ăl-ĭsm, *s.* [Eng. *chloral*; *-ism.*]

1. The act or practice of using chloral as a hypnotic.

2. The abnormal condition of the system resulting from the habitual use of chloral. The ill effects are often mental and moral as well as physical.

chlōr'-ăl-ĭst, *s.* [Eng. *chloral(ism)*; *-ist.*] A person addicted to the use of chloral.

chlōr'-ăl-īse, *v.t.* [Eng. *chloral*; *-ise.*] To treat with chloral, to affect with chloralism.

chlōr'-ă-nĭl, *s.* [Eng. *chlor(ine)*, and *anil(ine).*]

Chem.: $C_6Cl_4O_2$. Tetrachloroquinone. It is formed by the action of hydrochloric acid and chlorate of potassium, on aniline, phenol, isatin, &c. It crystallizes in golden-yellow lamiuæ, which are insoluble in water, soluble in hot alcohol and ether; it sublimes at 150°, and is converted by PCl_5 into perchlorobenzene, C_6Cl_6. The potassium salt of chloranilic acid, $C_6Cl_2O_2(OH)_2$, is formed by dissolving chloranil in strong potash; it crystallizes in dark-red needles, sparingly soluble in water.

chlōr-ă-nĭl'-ĭc, *a.* [Eng. *chloranil*; and *-ic.*] Pertaining to or derived from chloranil (q.v.).

chloranilic acid, *s.*

Chem.: Chloranilic acid, dichlor-dioxyquinone, $C_6Cl_2(OH)_2O_2$, is formed by decomposing the potassium salt by acids. It forms reddish crystalline scales.

chlōr-ăn'-ĭ-līne, *s.* [Eng. *chlor(ine)*, and *aniline* (q.v.).] [ANILINE.]

Chem.: By the action of chlorine on aniline, monochloraniline, $C_6H_4Cl(NH_2)$, dichloraniline, $C_6H_3Cl_2NH_2$, and trichloraniline, $C_6H_2Cl_3NH_2$, are obtained.

chlōr-ăn-thā'-cē-æ, *s. pl.* [From Mod. Lat. *chloranthus* (q.v.), and Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: A small family of Dicotyledons, with flowers of a very simple structure, allied to those of Piperaceæ and Saururaceæ. They are trees, shrubs, or rarely herbs, with opposite leaves connected by sheathing stipules. The minute flowers are in simple or branched terminal spikes, often articulate as in Gnetum.

chlōr-ăn'-thŭs, *s.* [Gr. χλωρός (*chlōros*) = green, and ἄνθος (*anthos*) = a flower.]

Bot.: A genus of plants, the type of the order Chloranthaceæ, the only floral envelope of which is a very small calyx, consisting of one scale adhering to the side of the ovary. The apparently single stamen, which is the most remarkable part of its structure, consists of three, the central one of which has a perfect two-celled anther, and the other two, one on each side of it, have only half an anther, so that they are only one-celled, or the two lateral half-anthers may be deficient, leaving a single perfect stamen. They are attached to the side of the ovary immediately above the calyx. They are natives of Japan and China, where they are called Chu-han.

chlōr-ăn'-thў, *s.* [CHLORANTHUS.]

Bot.: The tendency in brightly coloured petals when decaying to become green

chlōr-ăp'-ă-tīte, *s.* [Eng. *chlor(ine)*, and *apatite* (q.v.).]

Min.: A variety of Apatite (q.v.), in which the proportion of chlorine is excessive.

chlōr-ar-gўr'-īte, *s.* [Gr. χλωρός *chloros*) = green; ἄργυρος (*argyros*) = silver; and Eng. suff. *-ite* (*Min.*).]

Min.: A mineral consisting of silver and chlorine. (*Brit. Mus. Cat.*)

chlōr-ăs'-tĕr, *s.* [Gr. χλωρός (*chlōros*) = green, and ἀστηρ (*astēr*) = a star.]

Zool.: A genus of Infusoria, of the family Monadina, having a single mouth (?) terminal, a single frontal eye-spot, no tail, and the middle of the body with radiate warty processes. (*Grif. & Henfrey.*)

chlōr-ăs'-trō-līte, *s.* [Gr χλωρός (*chlōros*) = green, ἀστηρ (*aster*) or ἀστρον (*astron*) = a star, and Eng. suff. *-lite* (*Min.*), from λίθος (*lithos*) = a stone.]

Min.: A light bluish-green mineral, found on the banks of Lake Superior, in small rounded pebbles. It receives a fine polish. Hardness, 5·5—6; sp. gr., 3·180.

chlōr'-āte, *s.* [In Fr. *chlorate*, from Eng., &c. *chlor(ine)*, and suff. *-ate* (*Chem.*) (q.v.).] [CHLORIC ACID.]

Chlorate of potassium:

1. *Chem.:* $KClO_3$. Obtained by passing a current of chlorine gas through a mixture of carbonate of potassium and slaked lime, $K_2CO_3 + 6Ca(OH)_2 + 6Cl_2 = 2KClO_3 + 5CaCl_2 + CaCO_3 + 6H_2O$. The carbonate of calcium is removed by filtration, and on evaporating the solution the potassium chlorate separates out in colourless transparent anhydrous six-sided plates; water dissolves only 3·3 parts of the salt at 0°C. It is insoluble in alcohol. When heated, potassium chlorate is decomposed thus $2KClO_3 = KClO_4 + KCl + O_2$; on increasing the heat the potassium perchlorate is decomposed—$KClO_4 = KCl + 2O_2$. [CHLORIC ACID.]

2. *Pharm.* (*Potassæ Chloras*): It is given in the form of *Trochisci Potassæ Chloratis* (Chlorate of Potassium Lozenges). Chlorate of potassium acts as a refrigerant and diuretic; it exerts a powerful action upon the mucous membranes when used as a gargle in cases of severe tonsilitis, &c.

chlōr-ē-ă, *s.* [CHLORŒA.]

chlōr-hў-drō-quĭn'-ŏne, *s. pl.* [Eng., &c. *chlor(ine)*; *hydroquinones.*]

Chem.: Substitution compounds of hydroquinone, $C_6H_4\langle^{OH}_{OH}$, the $(OH)_2$ occupying the position in the benzene ring, 1—4. They are obtained by the reduction of the corresponding chloroquinones with sulphurous acid. $C_6H_2Cl(OH)_2$ melts at 158°; $C_6HCl_2(OH)_2$ at 134°; and $C_6Cl_4(OH)_2$ at 200°.

chlōr'-ĭc, *a.* [Eng. *chlor(ine)*; *-ic.*] Pertaining to or containing chlorine.

chloric acid, *s.*

Chem.: $HClO_3$. A monobasic acid obtained by decomposing barium chlorate, $Ba(ClO_3)_2$, by dilute sulphuric acid, and decanting the clear liquid. It oxidises organic matter rapidly. When boiled it gives off O_3 and Cl_2, and perchloric acid is formed. It forms

salts called chlorates; they are soluble, and give no precipitate with $AgNO_3$. Potassium chlorate explodes when triturated with sulphur or phosphorus in a mortar. It is used in the manufacture of fireworks, percussion caps, and lucifer matches. Chlorates when heated on charcoal deflagrate. When heated strongly they give off oxygen and are converted into chlorides which give a white precipitate with argentic nitrate. Heated with strong H_2SO_4 they give off Cl_2O_4 with explosive violence. Hydrochloric acid liberates euchlorine, an explosive mixture of chlorine and chlorine tetroxide; it is a powerful oxidising agent, used to destroy organic matter.

chloric ether, *s.*

1. *Chem.*: C_2H_5Cl, or $CH_3.CH_2Cl$. Ethyl chloride, Chlorethane, also called Hydrochloric ether, a monatomic haloid ether formed by substitution of an atom of chlorine for an atom of hydrogen in the hydrocarbon ethane by the direct action of chlorine. It also can be prepared by the union of hydrochloric acid with ethene, C_2H_4, and by distilling at a gentle heat alcohol saturated with dry hydrochloric acid gas. It is a thin, colourless, volatile liquid, boiling at 12·5°. By the action of hot aqueous caustic potash, it is resolved into ethyl alcohol and potassium chloride; with alcoholic potash it forms ethylic ether, $C_2H_5{}'O.C_2H_5$. Heated with soda-lime, it yields ethene, C_2H_4.

2. *Pharm.*: The so-called chloric ether, used in medicine, is only a solution of one fluid ounce of chloroform in nineteen fluid ounces of rectified spirit of wine. It is given as a narcotic and antispasmodic, and is a valuable sedative in neuralgia.

chlō'-ri-dāte, *v.t.* [Eng. *chlorid(e)*, and verbal suff. *-ate.*] To treat or prepare with a chloride.

chlōr'-īde, *s.* [Eng. *chlor(ic)*, and suff. *-ide* (q.v.).]

Chem.: A compound of chlorine with an element, or radical. Hydrogen chloride, H.Cl = Hydrochloric acid = Chlorhydric acid = Muriatic acid. Hydrochloric acid is a colourless gas. It is very soluble in water; 450 volumes dissolve at 15°. It fumes strongly in damp air. It is formed by the action of diffused daylight on a mixture of H and Cl, also by the action of strong sulphuric acid on sodium chloride; it can be collected over mercury; it is condensed into a colourless liquid by a pressure of 40 atmospheres at 10° C. Sp. gr., ·27. Its solution in water (commonly called hydrochloric acid) is easily obtained by distilling common salt NaCl with sulphuric acid. Muriatic acid is an impure solution of HCl, containing iron, arsenic, organic matter, and sulphuric acid. It is obtained in large quantities in the preparation of sodium carbonate. The hydrogen in hydrochloric acid can be replaced by metals, forming metallic chlorides (see the different metals). Soluble chlorides are detected by their giving a white precipitate with silver nitrate which is insoluble in nitric acid but soluble in ammonia. Chlorides heated with strong H_2SO_4 and MnO_2 give off chlorine.

Chloride of antimony solution:

Pharm.: *Antimonii Chloridi Liquor.* A heavy yellowish-red liquid. Sp. gr., 1·47. It consists of terchloride of antimony, $SbCl_3$, dissolved in hydrochloric acid; on the addition of water it gives a precipitate of oxychloride, SbOCl; this, treated with sodium carbonate, is converted into the oxide Sb_2O_3. [ANTIMONY.] Chloride of antimony is a powerful caustic and escharotic, and is applied to cancerous growths and poisonous wounds. The oxide of antimony, mixed with twice its weight of calcium phosphate, is a substitute for "James's powder." It is given when the diaphoretic and slightly alterative effects of antimony are required in a mild form.

Chloride of nitrogen:

Chem.: NCl_3. An oily explosive liquid, sp. gr. 1·65, obtained by the action of excess of chlorine on ammonium chloride solution; also by suspending a piece of ammonium chloride in a solution of hypochlorous acid, $NH_4Cl + 3HClO = HCl + NCl_3 + 3H_2O$. This dangerous substance is decomposed violently by gentle heat, or by contact with fat, &c. By some chemists it is thought to contain hydrogen. It is ammonia NH_3 in which the H is replaced by Cl.

Chloride of sodium:

1. *Chem.*: NaCl, sodium chloride or common salt. "SODIUM."

2. *Pharm.*: *Sodii Chloridum.* It occurs in transparent cubes or in small white grains. It is soluble in three parts of cold water, and its solubility increases very slightly with rise of temperature; it is partly precipitated by HCl. It is nearly insoluble in alcohol, and fuses at 776°, and at higher temperatures volatilises. It is a necessary article of food, and occurs in the blood and other animal fluids; a deficiency causes disease. Chloride of sodium in large doses acts as an emetic, purgative, and anthelmintic; in milder doses it is a slight stimulant and alterative. Externally it is applied as a stimulant and rubefacient. Sponging with salt water is good for rheumatism and joint affections.

Chloride of zinc solution:

Pharm.: *Liquor Zinci Chloridi.* A solution of chloride of zinc, $ZnCl_2$, which applied externally acts as an irritant and astringent; when mixed into a paste with gypsum it is applied as a powerful escharotic to malignant ulcers. A solution of chloride of zinc, sp. gr. 2, is used as a deodoriser and disinfectant under the name of "Sir W. Burnett's solution."

chlōr-id'-ic, *a.* [Eng. *chloride(e)*; *-ic.*] Pertaining to or containing chloride.

chlōr'-id-īze, *v.t.* [Eng. *chloride(e)*; *-ize.*] The same as CHLORIDATE (q.v.).

chlōr'-im'-ĕt-ry, chlōr-im'-ĕt-ry, *s.* [Eng. *chlorine*; Gr. *μέτρον* (*metron*) = a measure.] The method of determining the amount of chlorine in a sample of bleaching powder. (For methods see *Watts: Dict. Chem.*)

"He (Gay-Lussac) now prescribes as the preferable plan of observation, to pour very slowly from a graduated glass tube a standard solution of the chloride, to be tested upon a determinate quantity of arsenious acid dissolved in muriatic acid, till the whole arsenious be converted into the arsenic acids."—*Ure's Dictionary of Arts, Manufactures, and Mines.*

chlōr'-in-āte, *v.t.* [Eng. *chlorin(e)*; *-ate.*] To treat with chlorine.

chlōr'-in-ā-tĕd, *a.* [CHLORINATE, *v.*]

chlorinated lime, *s.*

Pharm.: Calx Chlorata. A mixture of calcium hypochlorite, $Ca(ClO)_2$, with calcium chloride, $CaCl_2$. A whitish powder is obtained by passing chlorine gas over loosely spread out hydrate of calcium. Its solution (*Liquor Calcis Chloratæ*) is formed by adding one pound of the solid to 160 fluid ounces of distilled water. It is used as a disinfectant and in the preparation of chloroform.

chlōr-in-ā'-tion, *s.* [Eng. *chlorin(e)*; *-ation.*] A process for the extraction of gold by exposure of the auriferous material to chlorine gas. First introduced by Plattner. The following conditions are necessary.—(1) The gold must be in a metallic state. (2) There must be no other substance in the charge which would combine with free chlorine. (3) The chlorine must have no impurities which would dissolve other metals or bases. (4) No reaction must be induced which would cause precipitation of the gold before the termination of the process. The process with quarts and free gold does not involve roasting, but the latter process is necessary with ores containing sulphurets and arseniurets. In the chlorination process, the ore is sifted into a wooden vat lined with pitch, and having a false bottom, beneath which the gas is admitted. The top is luted on and the gas admitted; when the gas begins to escape at a hole of observation in the lid, it is the signal that the air is ejected and the hole is then closed. The gas is continually passed into the mass for say eighteen hours, according to the coarseness of the gold; the cover is removed and water introduced, and the solution drawn off into the precipitation vat. The gold is precipitated by sulphate of iron, the supernatant liquor decanted. The sediment is a brown powder which is filtered upon paper dried in an iron or porcelain vessel, smelted to a metallic regulus in clay crucibles, a little borax, salt, and nitrate of potash being used as fluxes. (*Knight.*)

chlōr'-in-īze, *s.* [CHLORISATE.]

chlōr'-īne, *s.* [Ger. *chlor*; Fr. *chlorie*, from Gr. *χλωρός* (*chlōros*) = pale-green, light-green, greenish-yellow, and Eng. suff. *-ine* (*Chem.*).]

1. *Chem.*: A monatomic element. Symbol Cl. Atomic weight, 35·5. Discovered by Scheele in 1774. It was thought by Berthollet to contain oxygen, and was called by him *oxymuriatic acid*. It was found to be an element by Davy in 1810. Chlorine is a yellow green incombustible gas. It has a powerful irritating smell, and attacks violently the mucous membrane and the lungs. It is very soluble in water, acts strongly on metals, and is best collected by displacement. Sp. gr., 2·47. At the pressure of five atmospheres it is condensed into a heavy yellow liquid. It is obtained by heating common salt, sodium chloride, with sulphuric acid and black oxide of manganese. It combines with hydrogen to form hydrochloric acid, with an explosion in direct sunlight or when a light is applied to a mixture of the two gases, but slowly in diffused daylight. A solution of it in water is gradually converted in the sunlight into HCl with liberation of oxygen. A lighted candle burns in Cl with a smoky flame. Phosphorus, antimony, arsenic, and turpentine take fire in chlorine. Chlorine destroys animal and vegetable matter; and forms addition and substitution compounds with organic compounds; an aqueous solution of it has powerful bleaching properties. It is also a powerful disinfectant. It occurs in nature in the form of metallic chlorides. Three oxides of chlorine are known, Cl_2O; Cl_2O_3; Cl_2O_4.

2. *Pharm.*: Chlorine is used in pharmacy as *Liquor Chlori*, a solution of chlorine in water; and as *Vapor Chlori*, inhalation of chlorine. Free chlorine gas acts as a powerful stimulant or irritant, according to its state of dilution; it is used in cases of chronic bronchitis and phthisis. A diluted solution is used as a gargle for ulcerated tonsils; and as a lotion to foul ulcers, and in some skin diseases.

chlorine monoxide, *s.*

Chem.: Cl_2O. A colourless gas obtained by the action of chlorine on cooled precipitated mercuric oxide; it can be condensed to a red liquid, which explodes on elevation of temperature. It has powerful bleaching properties. It dissolves in water and forms hypochlorous acid; this acid forms salts called hypochlorites. These salts can also be obtained by passing chlorine gas into cold solutions of alkalies or alkaline carbonates, or over hydrates of calcium, &c. Bleaching-powder is thus prepared.

chlorine tetroxide, *s.*

Chem.: Cl_2O_4, a dark yellow explosive gas, which can be condensed to a red liquid. It is obtained by the action of strong sulphuric acid on chlorate of potassium. It is absorbed by caustic potash solution, forming a chlorate and a chlorite.

chlorine trioxide, chlorous oxide, chlorous anhydride, *s.*

Chem.: Cl_2O_3, a greenish-yellow gas, obtained by heating a mixture of potassium chlorate, nitric acid, and arsenic trioxide. It can be condensed into a very explosive liquid; the gas explodes at 50°, and is decomposed by sunlight. It is soluble in water, forming a crystalline hydrate which is gradually converted into chlorous acid.

chlōr'-in-īze, *v.t.* [Eng. *chlorin(e)*; *-ize.*] To treat or prepare with chlorine.

chlōr'-in-ized, *pa. par.* or *a.* [CHLORISED.]

chlōr-ī'-ō-dīne, *s.* [Eng. *chlor(ine)*; *iodine.*]

Chem.: A compound of chlorine and iodine, as iodine chloride, ICl. [IODINE.]

chlōr'-is, *s.* [Gr. *χλωρος* (*chlōris*) = a bird with a greenish belly, from *χλωρος* (*chlōros*) = green.]

Bot.: A genus of grasses, the typical one of the tribe Chlorideæ, distinguished chiefly by the spikes of inflorescence being in finger-like fascicles, rarely two, or only one. Flowers polygamous; glumes two, containing from two to six florets; lower flowers one to three, hermaphrodite; stamens three, and styles two. Sixty-two species are described in Steudel's "Synopsis," and these are mostly natives of warm, dry countries. *Chloris radiata* is a pretty annual grass, frequently cultivated in greenhouses for the sake of its ornamental and curious appearance. (*Treas. of Bot.*)

chlōr-is-āt'-ic, *a.* [Eng. *chlorisat(e)*; *-ic.*] Pertaining to chlorisatin (q.v.).

chlorisatic acid, *s.*

Chem.: $C_8H_5ClNO_3$. The potassium salt of this acid is obtained by mixing solutions of caustic potash and chlorisatin. It crystallises in yellow needles, which are decomposed by hydrochloric acid with precipitation of chlorisatin.

chlŏr-ĭs′-ə-tĭn, *s.* [Eng. *chlor(ine)*, and *isatin.*] [ISATIN.]

Chem.: $C_8H_4(ClNO_2$. Obtained by passing chlorine into tepid water in which isatin, or powdered indigo, is suspended. It is purified by crystallization from alcohol. It crystallises in orange prisms, having a disagreeable odour.

chlŏr-ĭs′-ə-tȳde, *s.* [Eng. &c. *chlor(ine)*; *isatyde* (q.v.).]

Chem.: A white or yellowish powder, deposited on cooling when chlorisatin has been dissolved, with heat, in hydrosulphuret of ammonia. It is sparingly soluble in water, and by heat is resolved into chlorisatin water, a new compound appearing as a violet-coloured powder, and termed Chlorin-tin.

chlŏr-I-sō′-mə, *s.* [Gr. χλωρός (*chlōros*) = green, and σῶμα (*sōma*) = a body.]

Ornith.: A sub-genus of the Myotherinæ, or Ant-thrushes, separated by Swainson from the Pitta of Temminck. (*Craig.*)

chlŏr′-ĭte, *s.* [Gr. χλωρίτις (*chlōritis*) = a grass-green stone, from χλωρός (*chlōros*) = green, and Eng., &c. suff. *-ite* (*Min.*) (q.v.).]

1. *Mineralogy:*

(1) The same as RAPIDOLITE (q.v.).

(2) The same as PENNINITE (q.v.).

(3) The same as CLINOCHLORE (q.v.).

Ferruginous Chlorite:

Min.: The same as DELESSITE (q.v.).

2. *Chem.* (*Pl.*)*:* Salts of chlorous acid. They can be obtained by passing chlorine trioxide into alkaline solutions; also by the action of Cl_2O_4 on bases. They are mostly soluble in water. Chlorites of lead and silver are insoluble, and are obtained by double decomposition.

chlorite schist, *s.*

Geol.: A green slaty rock, in which chlorite is abundant in foliated plates, usually blended with minute grains of quartz or sometimes with felspar or mica. It is often associated with or even graduates into gneiss and clay-slate. (*Lyell.*)

chlorite slate, *s.*

Geol.: The same as chlorite schist, or if there is any difference, then in the slates the laminations are finer.

chlorite spar, *s.* [In Ger. *chloritspath.*]

Min.: An old name for Chloritoid (q.v.).

chlŏr-ĭt′-ĭc, *a.* [Eng. *chlorit(e)*; *-ic.*] Pertaining to or containing chlorite.

chloritic sand, *s.*

Geol.: Sand coloured by an admixture of the simple mineral glauconite.

chloritic series, *s.*

Geol.: A name sometimes given to the Greensand beds, but the mineral is glauconite.

chlŏr-ĭt-ŏid, *s.* [Eng. *chlorite*, and Gr. εἶδος (*eidos*) = appearance.]

Min.: A monoclinic or triclinic chlorite-like mineral, of a dark-grey, greenish-grey to black colour. It is brittle, and has a double refraction. Hardness, 5·5—6; sp. gr., 3·5—3·6.

chlor-ĭ, in compos. [Gr. χλωρός (*chlōros*) = green.]

1. *Nat. Science:* In composition frequently used as a prefix to scientific words, and indicating a bright grass-green colour.

2. *Chem.:* Compounds in which chlorine has replaced some other element, as hydrogen, without altering the constitution of the compound, as chloro-benzene, C_6H_5Cl. The *o* is often omitted, and chlor is used.

chloro-argentotype, *s.*

Photog.: A photographic agent prepared by moistening a sheet of paper with a solution of common salt, and then dipping it in a bath of nitrate of silver. Taking out a thin film of the latter substance it becomes extremely sensitive to light.

chloro-benzene, *s.*

Chem.: Monochlor-benzene or phenyl chloride, C_6H_5Cl. It is prepared by the action of chlorine on benzene, or of PCl_5 on phenol. It boils at 132°. (Consult *Watts: Dict. Chem.*)

chloro-calcite, *s.*

Min.: Calcite with chlorine in its composition. (*Brit. Mus. Cat.*)

chloro-naphthalene, *s.*

Chem.: Monochloronaphthalene, $C_{10}H_7Cl$, dichloro-naphthalene $C_{10}H_6Cl_2$, &c. The chloronaphthalenes are obtained by boiling the chlorides of naphthalene with alcoholic potash, which removes HCl. These, when subjected to the action of chlorine, form addition products, and by again boiling these with alcoholic potash it removes more HCl, and a more highly chlorinated substitution compound is obtained.

chloro-phenol, *s.*

Chem.: Phenol $C_6H_5(OH)$, in which hydrogen has been replaced by chlorine, as Monochlorophenol $C_6H_4Cl(OH)$. Dichlorophenol $C_6H_3Cl_2(OH)$, and Trichlorophenol $C_6H_2Cl_3(OH)$ are obtained by action of chlorine on phenol. Pentachlorphenol or perchlorphenol, $C_6Cl_5(OH)$, crystallizes in long colourless needles soluble in alcohol and in ether. It melts at 187°. Concentrated nitric acid converts it into tetrachlorquinone $C_6Cl_4\langle{}^{O}_{O}\rangle$. When distilled with PCl_5 it yields C_6Cl_6 hexa-chlor benzene.

chloro-picrin, *s.*

Chem.: A compound formed by distilling picric acid with chloride of lime and water. Chloro-picrin, Nitro-trichlor-methane, Nitrochloroform $C(NO_2)Cl_3$. Also obtained by distilling chloral with strong nitric acid; also by distilling a mixture of methyl alcohol and sulphuric acid over a mixture of sodium chloride and potassium nitrate. It is an oily liquid, boiling at 112°. It is reduced to methylamine $CH_3{\cdot}H_2{\cdot}N$ by the action of iron filings and acetic acid. Chloro-picrin heated with alcoholic ammonia is converted into guanidine hydrochlorde $CH_5N_3{\cdot}HCl$. When heated with sodium ethylate it is converted into ethylic orthocarbonate $C(O{\cdot}C_2H_5)_4$.

chloro-quinones, *s. pl.*

Chem.: Substances formed by the action of chlorine on quinone, $C_6H_4\langle{}^{O}_{O}\rangle$; monochloroquinone, $C_6H_3ClO_2$. Dichloroquinone, $C_6H_2Cl_2O_2$, is formed by action of hypochlorous anhydride, Cl_2O, on benzene; and by heating trichlorophenol, $C_6H_2Cl_3(OH)$, with nitric acid, it forms large yellow prisms, melting at 120°. Trichloroquinone, $C_6HCl_3O_2$, is obtained by the action of chromyl chloride, CrO_2Cl_2, on benzene, C_6H_6. It crystallizes in large laminæ, melting at 166°. Tetrachloroquinone, $C_6Cl_4O_2$. [CHLORANIL.]

chloro-toluene, *s.*

Chem.: Chlorotoluene, or Tolyl Chloride, $C_6H_4Cl{\cdot}CH_3$, occurs in three modifications. Parachlortoluene, 1—4, is formed by the action of chlorine on toluene at ordinary temperatures; it is a liquid, boiling at 160°. By oxidation with chromic acid mixture it yields parachlorbenzoic acid. When chlorine acts on boiling toluene, benzyl chloride, $C_6H_5{\cdot}CH_2Cl$, is formed. (See *Watts: Dict. Chem.*)

chlŏr-ŏ-bĕn-zō′-ĭc, *a.* [Eng. *chlor(ine)*, and *benzoic.*]

chlorobenzoic acid, *s.*

Chem.: $C_6H_4Cl{\cdot}CO\,OH$. Benzoic acid in which hydrogen is replaced by chlorine.

chlŏr-ŏ-chrŏm′-ĭc, *a.* [From Eng. *chloro.* and *chromic.*] Having chromium and chlorine in its composition.

chlorochromic acid, *s.*

Chem.: CrO_2Cl_2. Dioxychloride of chromium, chromyl chloride, obtained by the action of sulphuric acid on a dry mixture of potassium dichromate and chloride of sodium. A heavy red liquid, giving off red vapours. Sp. gr., 1·71; boiling at 118°, decomposed by water into chromic and hydrochloric acids. Slowly passed through a glass tube heated to low redness it deposits rhombohedral dark-green hard crystals of sesquioxide of chromium.

chlŏr′-ŏ-chroŭs, *a.* [Gr. χλωρός (*chlōros*) = pale green, and χρόα (*chroa*) = colour.] Having a green colour.

chlŏr-ŏ-cŏc′-cŭm, *s.* [Gr. χλωρός (*chlōros*) [pale-green, and κόκκος (*kokkos*) = a kernel.]

Bot.: A genus of Algals, order Palmellæ. *C. Chlorococcum vulgare* consists of extremely minute cells, multiplying into twos and fours, with no gelatinous substratum and no zoospores. It covers nearly every piece of unpainted timber and old trunk in England, 300 millions of individuals on a square inch. (*Griff. & Henfrey.*)

chlŏr′-ŏ-form (*Eng.*), **chlŏr-ŏ-fŏr′-mĭum** (*Mod. Lat.*), *s.* [Eng., &c. *chlor(ine)*, and *form(ic)*, from Lat. *formica* = an ant.]

1. *Chem.:* $CHCl_3$, trichloromethane, methenyl chloride, terchloride of formyl. Chloroform is formed by the action of the sun's rays on a mixture of chlorine and marsh gas; also by the action of caustic potash on chloral or chloracetic acid, or by the action of nascent hydrogen on tetrachloride of carbon. It is prepared on a large scale by distilling water and alcohol with bleaching-powder. Chloroform is a colourless, mobile, heavy, ethereal liquid. Sp. gr., 1·5. It boils at 62°; its vapour density is four times that of air; it is nearly insoluble in water, but dissolves readily in alcohol. It has a sweet taste. It dissolves caoutchouc, resins, fats, alkaloids, &c. It should not be exposed to the light, as it may decompose, hydrochloric acid and chlorine being set free.

2. *Pharm.:* Chloroform is used in medicine, dissolved in alcohol, under the name of chloric ether, as a stimulant. Chloroform taken internally acts as a narcotic, sedative, and antispasmodic, and is given in cases of asthma, colic, and cholera, also for neuralgia. *Linimentum Chloroformi*, equal parts of chloroform and camphor liniment, is used externally to allay pain and irritation in neuralgia and itching.

3. *Surgery & Midwifery:* The vapour of chloroform, when inhaled for some time, produces a temporary insensibility to pain. Inhaled in small doses it produces pleasurable inebriation, followed by drowsiness; in larger doses it causes loss of voluntary motion, suspension of mental faculties, with slight contraction of the muscles and rigidity of the limbs; then if the inhalation is continued a complete relaxation of the voluntary muscles takes place, but if carried too far it causes dangerous symptoms of apnœa or syncope, and the patient must be restored by artificial respiration. Chloroform should not be administered to persons suffering from cerebral disease or organic cardiac affection. Dr. Simpson, of Edinburgh, in 1847, began to employ the vapour as a means of producing anæsthesia or insensibility, partial or complete, in certain surgical operations and painful diseases, as well as in ordinary obstetric practice.

4. *Law:* By 24 and 25 Vict. c. 100, to administer chloroform or anything similar, with the view of one's self committing, or aiding another in committing, an indictable offence, is felony.

chlŏr′-ŏ-form, *v.t.* [CHLOROFORM, *s.*] To bring under the influence of chloroform; to produce anæsthesia or unconsciousness in, by means of chloroform.

chlŏr-ŏ-form′-ĭc, *a.* [Eng. *chloroform*; *-ic.*] Pertaining to, derived from, or produced by chloroform.

chlŏr-ŏ-form-ĭ-zā′-tion, *s.* [Eng. *chloroform*; *-ization.*] The aggregate of anæsthetic phenomena resulting from the inhalation of chloroform.

chlŏr-ŏ-mĕl′-ăn, *s.* [Gr. χλωρός (*chlōros*) = green, and μέλας (*melas*), neut. μέλαν (*melan*) = black.]

Min.: The same as CRONSTEDTITE (q.v.).

chlŏr-ŏm′-ĕt-ĕr, *s.* [Eng. *chlor(ide)*; Gr. μέτρον (*metron*) = a measure.] An instrument for testing the decolourizing or bleaching powers of samples of chloride of lime. Ure's process consists in adding liquor of ammonia of a known strength, tinged with litmus, to a solution of a given weight of the chloride under examination until the whole of the chlorine is neutralized, which is known by the colour being destroyed. From the quantity of ammonia consumed the strength of the sample is estimated.

chlŏr′-ŏ-mĕ-thāne, *s.* [Eng. *chloro*; *meth(yl)*; *-ane.*]

Chem.: CH_3Cl. A colourless, odorous gas, obtained when equal volumes of marsh gas CH_4 and Cl are exposed to reflected sunlight, or by heating a mixture of NaCl, wood spirit, and sulphuric acid. Exposed to sunlight with excess of chlorine, it is converted into CH_2Cl_2, then $CHCl_3$, and finally into CCl_4.

chlŏr-ŏ-mĕt'-rĭc, *a.* [Eng. *chlorometr(y)*; *-ic.*] Pertaining to or effected by chlorometry.

chlŏr-ŏm'-ĕ-trȳ, *s.* [CHLORIMETRY.]

chlŏr'-ŏ-mўs, *s.* [Gr. χλωρός (*chlōros*) = green; and μῦς (*mus*) = a mouse.] [AGOUTY.]

chlŏr'-ŏ-pāl, *s.* [Gr. χλωρός (*chlōros*) = green, and Eng. *opal* (q.v.).]

Min.: A compact massive mineral, with an opal-like appearance; colour greenish-yellow to pistachio-green. Hardness, 2·5—4·5; sp. gr., 1·727—1·870. It occurs in Saxony, Hungary, &c. Compos.: Silica, 46; sesquioxide of iron, 38; alumina, 1; magnesia, 2; water, 13. (*Dana.*)

chlŏr-ŏ-phæ'-ĭte, *s.* [Gr. χλωρός (*chlōros*) = green; φαιός (*phaios*) = brown, and Eng. suff. *-ite* (*Min.*).]

Min.: A chlorite-like mineral from the Western Isles of Scotland, at Scuir More in the Island of Rum, and from Fifeshire and the Faroe Islands. Hardness, 1·5—2; sp. gr., 2·92; colour, dark or olive-green, changing to dark-brown on exposure.

chlŏr-ŏ-phāne, *s.* [Gr. χλωρός (*chlōros*) = green, and φαίνω (*phainō*) = to appear.]

Min.: A variety of Fluorite (q.v.), affording a green phosphorescent light, sometimes called *pyro-emerald*. It occurs in Connecticut with topaz in gneiss.

chlŏr-ŏ-phæ'-ŏr-ĭte, *s.* [Gr. χλωρός (*chlōros*) = green; φαιός (*phaiós*) = to appear, and Eng. suff. *-ite* (*Min.*) (q.v.).]

Min.: A greenish variety of Glauconite (q.v.).

chlŏr-ŏ-phĕ'-nĭc, *a.* [Eng. *chloro*; *phen(ol)*, and suff. *-ic* (*Chem.*).]

Chem.: Composed of phenol and chlorine.

chlorophenesic acid, *s.*

Chem.: Dichlorophenol, $C_6H_4Cl_2O$, is a volatile oil, insoluble in water, soluble in alcohol and ether, obtained by dry distillation of dichlorosalicylic acid.

chlŏr-ŏ-phĕn-ĭ'-sĭc, *a.* [Eng. *chloro*; *phen(ol)*, and suff. *-isic.*]

Chem.: Composed of phenol and chlorine.

chlorophenisic acid, *s.*

Chem.: Trichlorophenol, $C_6H_3Cl_3O$, obtained by the action of chlorine on phenol. It crystallises in colourless silky needles, which have a strong odour, and are slightly soluble in water, soluble in alcohol and ether.

chlŏr-ŏ-phĕn-ŭ'-sĭc, *a.* [Eng. *chloro*; *phen(ol)*, and suff. *-usic* (*Chem.*).]

Chem.: Composed of phenol and chlorine.

chlorophenusic acid, *s.*

Chem.: The same as pentachlorophenol, C_6HCl_5O, obtained by the action of an excess of chlorine on an alcoholic solution of trichlorophenol.

¶ The letters a, e, i, o, u are used to distinguish the compounds formed by replacing respectively 1, 2, 3, 4, or 5 atoms of H in phenol C_6H_6O by the same number of monatomic elements or monatomic radicals. See also the nitrophenols.

chlŏr'-ŏ-phȳll, chlŏr'-ŏ-phȳ'lle, *s.* & *a.* [Gr. χλωρός (*chlōros*) = green, and φύλλον (*phullon*) = a leaf; Fr. *chlorophylle.*]

A. *As substantive*:

1. *Bot. Physiol.*: The name given to the green-colouring matter of plants. Its nature is still doubtful. It is ordinarily stated that it exists under the form of globules or granules, and occasionally as an amorphous granular substance. It presents itself in the form of distinct corpuscles in the cells of the flowering plants generally.

"The colour of plants, especially the green colour, is produced by the presence of *chlorophyll*, which may be considered a vital secretion."—*Lindley: Introduction to Botany*, bk. i., sect. 7, § 93.

2. *Animal Physiol.*: Chlorophyll exists in *Hydra viridis*, the Green Fresh-water Polype, one of the Cœnterata, and in *Stentor*, an infusorian animalcule. (*Nicholson.*)

B. *As adj.*: Coloured by chlorophyll; composed of chlorophyll.

chlŏr'-ŏ-phȳll bŏdĭes, *s. pl.* Particles of protoplasm of definite form coloured green by chlorophyll. (*Thomé.*)

chlŏr'-ŏ-phȳl-lā'-cē-ŏŭs, *a.* [Eng. *chlorophyll*; *-aceous.*] Of the nature or character of chlorophyll; containing chlorophyll.

"The affinities exhibited by many *chlorophyllaceous* and colourless Thallophytes."—*Nature*, Feb. 24th, 1881, p. 391.

† **chlŏr'-ŏ-phȳl'-ĭ-ăn**, *a.* [Eng. *chlorophyll*; *-ian.*] Pertaining to, or containing chlorophyll.

chlŏr'-ŏ-phȳl'-lĭte, *s.* [Gr. χλωρός (*chlōros*) = green, φύλλον (*phullon*) = a leaf, and Eng. suff. *-ite* (*Min.*) (q.v.).]

Mineralogy:

1. The same as IOLITE (q.v.).

2. A variety of Fahlunite (q.v.), from Unity, Maine, U.S.A.

chlŏr-ŏ-pĭc'-rĭn, *s.* [Eng., &c. *chloro*; and *picrin.*]

Chem.: CNO_2Cl_3 is obtained by distilling picric acid with potassium chlorate and hydrochloric acid. It is an oily odorous liquid. Sp. gr., 1·665. It boils at 115°.

chlŏr-ŏ-pro-tĕ'-ĭc, *a.* [Eng. *chlorine*, and *protein* (q.v.).] Compounded of chlorine and proteine.

chloroprotein acid, *s.*

Chem.: A name given to the white flocks which are deposited when chlorine is passed through a solution containing proteine = $C^{40}H^{31}N^{5}O^{12}$.

chlŏr'-ŏp-sĭs, *s.* [Gr. χλωρός (*chlōros*) = green, and ὄψις (*opsis*) = face, appearance.]

Ornith.: A genus of birds belonging to the Merulidæ or Thrushes. The bill is long and hooked.

chlŏr-ŏ-pȳ'-ĭ-ŏ, *s.* [Gr. χλωρός (*chlōros*) = green, and ὠγή (*pugē*) = the rump, the tail.]

Ornith.: A genus of birds belonging to the Meropidæ or Bee-eaters. They are natives of Madagascar.

chlŏr-ŏ-rhŏd'-ĭc, *a.* [Gr. χλωρός (*chlōros*) = green, and ῥόδον (*rhodon*) = a rose.]

chlororhodic acid, *s.*

Chem.: An acid obtained from pus. It crystallises in fine needles, is soluble in water and alcohol, but not in ether. Chlorine water in dilute solutions has a rose-red colour.

chlŏr'-ŏ-sĭs, *s.* [Gr. χλωρός (*chlōros*) = green.]

1. *Bot.*: One of the most formidable diseases to which plants are liable, and often admitting of no remedy. It consists in a pallid condition of the plant, in which the tissues are weak and unable to contend against severe changes, and the cells are more or less destitute of chlorophyll. It is distinct from blanching, because it may exist in plants exposed to direct light on a south border, but is often produced or aggravated by cold ungenial weather and bad drainage. The most promising remedy is watering them with a very weak solution of sulphate of iron. Many forms of the disease exist, of which those of clover, onions, cucumbers, and melons are best known.

2. *Med.*: An affection in which the skin of the body, and especially that of the face, assumes a peculiar greenish cast, and hence is popularly known as green-sickness (q.v.). The condition is closely allied to anæmia, and is due to deficiency of the colouring matter of the blood. Chlorosis occurs chiefly amongst young and delicate women who lead sedentary lives under unwholesome conditions.

chlŏr'-ŏ-spĕrm, *s.* [CHLOROSPERMEÆ.]

Bot.: Any algal of the division Chlorospermeæ (q.v.).

chlŏr-ŏ-spēr'-mē-æ, *s. pl.* [Gr. χλωρός (*chlōros*) = green, and σπέρμα (*sperma*) = a seed.]

Bot.: One of the three great divisions of Algæ characterised by the green colour of the spores. The spores of most members of this great division, when they are first liberated, are endowed with active motion, which is produced by long thorny-like appendages and by short cilia. [CILIA.] Such spores are called from their resemblance to Infusoria, Zoospermes (q.v.). The green powdery or gelatinous productions so common upon damp walls or rocks; the curious microscopic so-called productions which abound in our pools or infest other Algæ, the green floating masses which form a scum upon our pools, or the shrubby tufts of the same colour in running streams or on sea-rock, &c., are so many members of the division. (*Treas. of Bot.*)

chlŏr'-ŏ-sphære'-ă, *s.* [Gr. χλωρός (*chlōros*) = green, and σφαῖρα (*sphaira*) = a ball, a sphere.]

Bot.: A genus of Unicellular Algæ, probably related to Œdogoniæ (Rabenhorst places it among the Palmellaceæ), of which one species, *Chlorosphæra Ollivari*, is known, consisting of a single globular cell about one-2000th in diameter densely filled with green contents, sometimes exhibiting a radiate appearance. The *C. Ollivari* was found in a boggy ditch at Prestwich Car, Northumberland. (*Griff. & Henfrey.*)

chlŏr'-ŏ-spĭn'-ĕl, *s.* [Gr. χλωρός (*chlōros*) = green, and Eng. *spinel* (q.v.).]

Min.: A variety of Spinel (q.v.), of a green colour, due to the presence of copper. Also called **Magnesia-iron Spinel.** Sp. gr., 3·591—3·594.

chlŏr'-ŏ-stŏm-ă, *s.* [Gr. χλωρός (*chlōros*) = green, and στόμα (*stoma*) = a mouth.]

Zool.: A genus of Molluscs belonging to the family Trochidæ. Shell deeply umbellicated almost to the top of the spire; inner lip forming a semi-margin to the umbellicus, outer angulated at the base; aperture remarkably oblique.

chlŏr-ŏt'-ĭc, * **chlŏr-ŏt'-ĭck**, *a.* [Fr. *chlorotique*, from *chlorosis* (q.v.).] Affected with or relating to chlorosis

"The ostensible of sedentary and chloro-tic men."—*Bailey.*

chlŏr'-ŏ-tȳ'-l-ĭ-ăm, *s.* [Gr. χλωρός (*chlōros*) = green, and τύλη (*tulē*) = a swelling, a knot.]

Bot.: A genus of Confervoid Algæ belonging to the family Chætophoraceæ. Filaments jointed, repeatedly dichotomous, parallel; joints of two kinds, some elongate and colourless, and others swollen, abbreviate, and with green endochromes. (*Griff. & Henfrey.*)

chlŏr'-ŏŭs, *a.* [Eng. *chlor(ine)*; *-ous.*]

Chem.: Pertaining to Chlorine.

chlorous acid, *s.*

Chem.: $HClO_2$. An acid obtained by condensing chlorous oxide in water or by action of dilute sulphuric acid on a metallic chlorite. Its solution is a greenish-yellow liquid, having strong bleaching property; its salts are called *chlorites.*

chlorous oxide, *s.* [CHLORINE.]

chlorous pole, *s.*

† *Elect.*: A term applied on a certain electrical hypothesis to the negative pole of a galvanic battery, because of its exhibiting the same attraction as chlorine. On the same hypothesis the positive one is called the zincous or zincoid pole.

chlŏr-ox-ȳ'-lŏn, *s.* [Gr. χλωρός (*chlōros*) = green, and ξύλον (*xulon*) = wood.]

Bot.: A genus of Cedrelaceæ, generically distinguished by its fruit having only three cells, and splitting into three parts instead of five. The Satin-wood tree of India, *Chloroxylon Swietenia*, forms a fine tree fifty or sixty feet in height. It is a native of Ceylon and the Coromandel coast. It furnishes a handsome light-coloured hard wood with a satin-like lustre, and sometimes beautifully mottled or curled, bearing some resemblance to boxwood, but rather deeper in colour. It is used for articles of turnery, for the backs of brushes, and as veneering for cabinet-work. (*Treas. of Bot.*, &c.)

chlŏr'-ŭ-rĕt, *s.* [Eng. *chlor(ine)*, and suff. *-uret* (*Chem.*).]

Chem.: A compound of chlorine, a name formerly given to what is now termed chlorids.

ch̆ŏak, *v.t.* & *i.* [CHOKE.]

ch̆ŏaked, *a.* [CHOAK.]

Printing: A term applied to the press,

when, for want of proper washing, the ink gets into the hollow of the face of the type.

cho-an-ite, *s.* [Gr. χοάνη (*choanē*) = a funnel.]

Palæont.: A genus of fossil Zoophytes, placed between Alcyonium and Ventriculites. They have a central cavity at the upper part, and outer surface not reticulated. Skeleton generally funnel-shaped.

choast, *s.* [Hoast.] A severe cough (*Scotch.*) (*Scott.*)

***chock** (1), *s.* [O. Fr. *choc.*] [Shock.] An attack, an encounter, a charge.

"One of the kings of France died miserably by the chock of an ox." —*Sp. Parkhurst. Divine Arithmetick.* p. 6

chock (2), *s.* & *adv.* [A more variant of *choke* (q.v.).]

A. *As substantive:*

1. *Shipbuilding:*

(1) A block, preferably wedge-shaped, driven behind the props of a cradle to prevent it from slipping on the ways before the ship is ready to launch.

(2) A piece of timber framed into the heads and heels of ships timbers at their junctions to act as a lap to the joint, and make up the deficiency at the inner angle, as in the stem-piece and the main-piece of the head; in the dead wood, &c.

2. *Navigation:* A wedge used to secure anything with, or for anything to rest upon. The long-boat rests upon two large chocks when it is stowed. (*Weale.*)

3. *Cooperage:* A wedge-shaped block placed beneath and against the bilge of a cask to keep the latter from rolling.

4. *Carriage-building:* A piece of wood by which the wheel of a carriage is prevented from moving forward or backward.

5. Loose pieces of wood or stone placed in or upon any machine to add to its weight and steadiness; as stones placed in a mangle, weights laid on a harrow, roller, &c.

B. *As adv.:* Quite, full.

"I drove a shaft,
Chock to the steel."
Taylor: Philip Van Art., II. iii. 1.

¶ *Chock and block, chock-a-block:*

1. *Naut. & Mil.:* A term signifying closely-wedged.

2. *Fig.:* Choke-full.

chock-full, *a.* [Choke-full.]

***chock** (1), *v.t.* & *i.* [Chuck, Shock.]

A. *Intrans.:* To encounter.

B. *Trans.:* To give a shock to. (*Turberville.*)

chock (3), *v.t.* & *i.* [Chock, *s.*]

A. *Transitive:*

1. To fasten or stop with a wedge.

*2. To heap up (?).

"And in the tavern in his cups doth roar,
Chocking his crowns."
Drayton: Agincourt, p. 70. (*Latham.*)

B. *Intrans.:* To fill up; to fit into exactly.

"The woodwork thereof . . . exactly chocketh into the joints again." —*Fuller: Worthies*, i. 140.

chock (3), *v.t.* [Choke.] (*Scotch.*) (*Burns.*)

chock-in, *pr. par., a., & s.* [Choking.] (*Burns.*)

chöc-ö-late, *s.* & *a.* [Sp. & Port., from Mexican *cacuatl* = cacao.]

A. *As substantive:*

1. The nut of the cacao-tree. [Cacao.]

2. A paste or cake made from the roasted kernels of the *Theobroma cacao.*

¶ The roasted and crushed seeds of the cacao-nut tree are ground between two horizontal millstones, which are kept at a temperature of about 200° F., by means of a steam-jacket. The nibs pass down from the hopper into the shoe, which is shaken by a damsel on the spindle of the runner so as to discharge the nibs into the eye which leads them to the space between the stones. The heat and friction liberates the oil, which is one third of the weight, and the cacao issues as a paste from the spout and is conducted to a second and similar mill where the stones are similarly heated but are closer set, so as to still farther reduce the paste. It is discharged from the second grinding in a liquid condition and is collected in a pan, where it hardens into a cake. To enable it to form an emulsion with water, it receives additional substances. Sugar, honey, molasses, gum, starch, flour, rice, and arrow-root are adapted for this purpose. Spices and flavouring extracts are added for some markets.

3. The drink made by dissolving chocolate in boiling water.

B. *As adj.:* Composed of, relating to, or of the colour of chocolate.

*** chocolate-house,** *s.* A house where chocolate was prepared and sold.

chocolate-mill, *s.* A mill in which the roasted and crushed seeds of the cocoa plant are ground between two horizontal millstones kept at a temperature of about 200° Fahr. This liberates the oil, which is about one-third of the weight, leaving the cocoa to issue as a paste from the spout in the machine.

chocolate-nut, *s.* The nut of the cacao-tree. [Chocolate, *s.*]

chocolate-root, *s.* The root of a plant, *Geum canadense.*

chocolate-tree, *s.* *Theobroma cacao*, from the seeds of which chocolate is made.

*** chod-chod,** *s.* [Heb. כדכד (*kadkod*).] A sparkling gem, probably a ruby. (*N.E.D.*)

"Gemme and purpar, and cloath with dyuerse colours and bijis and silk and chodchod, that is precious marchandise." —*Wycliffe: Rush.*, xxvii. 16.

*** chöde,** *pret. of v.* [Chide.]

chöd-nëf-fite, *s.* [Named after the discoverer, Herr Chodnef, and suff. *-ite* (*Min.*).]

Min.: A mineral much resembling Chlolite, found in the Ilmen Mountains at Miask. Compos.: Fluorine, 56·4; aluminum, 16·3; sodium, 27·3. Sp. gr., 2·62—2·77.

chœr-ə-dö-di-ə, *s.* [Cheradodia.]

chœr-ö-pŏt'-ə-mŭs, chœr-ö-pŏt'-ə-mŭs, chœr-ö-pŏt'-ə-mŭs, *s.* [Gr. χοῖρος (*choiros*) = a pig, and ποτᾰμός (*potamos*) = a river.]

Palæont.: An extinct genus of the order Pachydermata, or thick-skinned Mammalia, considered as forming a link between the Anoplotherium and the Peccary.

chœr-ŏp-sis, *s.* [Gr. χοῖρος (*choiros*) = a pig, and ὄψις (*opsis*) = appearance.] [Liberian Hippopotamus.]

*** choffe,** *s.* [Chuff.] A rough, clownish fellow. (*Prompt. Parv.*)

*** chŏf'-fër,** *s.* [Chafer.] A chafing-dish.

*** chŏf'-fing,** *pr. par.* [Chafing.]

*** choffing-dish,** *s.* [Chafing-dish.]

"Make balls, which ye shall put on coals, in a *choffing-dish*, and the party is to receive the fume. . . ." —*R. Germain: Royal Physician*, p. 223

çhŏlçe, * çhŏls, * çhŏlse, * çhŏŋs, *s.* & *a.* [O. Fr. *chois*, from Fr. *choisir* = to choose; Fr. *choix.*]

A. *As substantive:*

1. The act of choosing or determining between two or more things proposed.

"His *choice* was soon made . . ." —*Macaulay. Hist. Eng.*, ch. xvi

2. The power of choosing between two or more things; power of election or preference.

"Love is not in our *choice*, but in our fate."
Dryden: Palamon & Arcite, i. 228.

"*Choice* befits not thy condition,
Acquiescence suits thee best."
Cowper: Walking with God, No 2.

*3. Care or discrimination in choosing; judgment, skill.

". . . I imagine they were collected with judgment and *choice*." —*Bacon: Apoph.*

4. A number of things proposed or offered for selection or discrimination.

"A braver *choice* of dauntless spirits
Did never float upon the swelling tide."
Shakesp.: King John, ii. 1

5. The thing chosen or elected; selection, preference.

"Oh! hearken, stranger, to my voice!
This desert mansion is my *choice!*"
Campbell: O'Connor's Child, v

6. That which would be chosen or preferred; the best part of anything; the best.

". . . in the *choice* of our sepulchres bury thy dead . . ." —*Gen.* xxiii. 6.

¶ *A matter of choice:* One in which there is freedom of choice or election as to the course to be pursued or preferred.

"This was indeed merely *matter of choice* . . ." —*Macaulay. Hist. Eng.*, ch. xi.

To make choice of: To choose; to select one from two or more things offered.

"Wisdom or what herself approves *makes choice*.
Nor is led captive by the common voice."
Denham: Sir Francis, ii.

B. *As adjective:*

I. *Of things:*

1. Worthy of being chosen or preferred; of superior merit; excellent, select.

"Istill a chamber full *choice* cheeses there stay."
Dearport of Troy, 1638.

"He was a man of a *choice* spirit, only he was always kept very low, . . ." —*Dampier: The Pilgrim's Progress*, pt. ii.

*2. Carefully chosen or selected; fit, appropriate.

II. *Of persons:* Careful or discriminating in choosing or preserving; difficult to please; chary, frugal.

"He that is *choice* of his time, will also be *choice* of his company, and *choice* of his actions." —*Taylor: Holy Living.*

☞ For the difference between *choice* and *option*, see Option.

*** choice-drawn,** *a.* Selected with especial care

"For who is he, whose chin is but enrich'd
With one appearing hair, that will not follow
These cull'd and *choice-drawn* cavaliers of France?
Shakesp.: Hen. V, iii. (Chorus).

*** çhŏlçe-fŭl, * çhoiçe-fŭll,** *a.* [Eng. *choice*; *-ful*(l).]

1. Making frequent choices; fickle, changeable.

"His *choiceful* sense with every change doth flit."
Spenser (Webster.)

2. Offering a choice, varied.

"Heav'n *choicefull* plenty." —*Spicester: The Colonies*, p. 201.

*** çhŏlçe-lëss,** *a.* [Eng. *choice*; *less.*] Not having the right or power of choosing; not free.

"Neither the weight of the matter of which the cyltinder is made, nor the round volubile form of it, are any more imputable to that dead *choiceless* creature, than the first motion of it . . ." —*Hammond*

† çhŏlçe-lў, * çhŏlçe-lieh, * çhŏls-lĭ, * çhŏls-lў, *adv.* [Eng. *choice*; *-ly.*]

1. By choice; of free choice or will.

"To seche a childe that *chosely* chese
In maydenes blode." —*Legends of Holy Rood* (ed. Morris), p. 218.

2. Finely, excellently, in a choice manner.

"It is certain it is *choicely* good." —*Walton: Angler*

3. Carefully; with care used in the choice.

"To Ireland will you lead a band of men,
Collected *choicely*, from each county some."
Shakesp.: 2 Henry VI, iii. 1.

çhŏlçe-nëss, *s.* [Eng. *choice*; *-ness.*]

1. The quality of being worthy of being chosen; excellence, superiority.

"Carry into the shade such auriculas, seedlings, or plants, as are for their *choiceness* reserved in pots." —*Evelyn: Calendarium hortense*

2. Carefulness, nicety, preciseness.

choir (pron. **kwīr), quīre, * queer, * quoere, * queir,** *s.* & *a.* [Fr. *chœur*; Sp. & Ital. *coro*; Lat. *chorus* = a band of singers; Gr. χορός (*choros*) = a dance in a ring, a band of singers.] [Chorus, Quire.]

A. *As substantive:*

I. *Ord. Lang.:* A number of singers [II. 1.].

"Had vanish'd from his prospects and desires;
Not by translation to the heavenly *choir*."
Wordsworth: Excursion, bk. vi.

II. *Technically:*

1. *Eccles.:* The organised body of singers in church services.

☞ The minor canons, choral vicars, and choristers, or other singers taken collectively, are spoken of as the choir. The choral body is usually divided into two sets of voices, the one sitting on the north and the other on the south side of the chancel, and are known by the respective titles of Cantoris and Decani from their nearness to the Cantor (or Precentor) and to the Decanus (or Dean). In most cathedrals and collegiate chapels, the Decani side is held to be the side of honour, the best voices are placed there, and all the "*verses*" or *soli* parts, if not otherwise directed, are sung by that side, which is also considered the "first choir" (*coro primo*) in eight-part music. (*Stainer & Barrett.*)

2. *Eccl. Archit.:* The part of the building in a cathedral or collegiate chapel set apart for the performance of the ordinary daily

service. The choir is generally situated at the eastern end of the building, and is frequently

"Thy *chop*, thy *chol*, gars mony men live chaste,
Thy gane it gars us mind that we maunae die."
Everyman, ii. 56, ed. 3.

chŏl-æ'-mĭ-ę, *s.* [From Gr. χολή (*cholē*) = bile, and αἷμα (*haima*) = blood.]

Med.: A condition in which the bile is present in the circulation. [JAUNDICE.]

chŏl-æ-pŏ'-dĭ-ę, **chŏl-æ-pŭs,** *s.* [Gr. χωλοπους (*cholopous*) = lame-footed. χωλος (*cholos*) = lame, and πους (*pous*) = foot.]

Zool.: A genus of edentata, comprehending the two-toed sloths. The name was given by Illiger.

chŏl'-ę-gŏgue, *s.* [Fr. *cholagogue*; Gr. χολάγωγος (*cholagōgos*), from χολη (*chole*) = the bile, and ἀγωγος (*agōgos*) = leading, drawing: ἀγω (*agō*) = to lead, to draw.]

Pharm.: Cholagogues are purgative or cathartic medicines, as calomel, aloes, &c., which act upon the liver and cause flow of bile into the intestines. They are supposed to act by stimulating the gall-bladder. [CATHARTICS.]

chŏl-ate, *s.* [Gr. χολή (*cholé*) = the bile, and Eng. suff. *-ate* (*Chem.*).]

Chem.: A salt of cholcic acid.

chŏl-ĕ-date *s.* [Eng. *chole*(*ic*); *-ate.*]

Chem.: A salt of cholcic acid.

chŏl-ĕ-doch, chŏ-lĕd'-ŏ-chŭs, *a.* [CHOLEDOCHUS.] Conveying bile.

chŏ-lĕd'-ŏ-chŭs, *a.* [Gr. χολή (*cholé*) = bile, and δοχή (*dochē*) = . . . a receptacle.]

Anat.: The tube formed by the union of the hepatic and cystic ducts. (Owen.)

chŏl-ĕd-ŏg'-raph-ỹ, *s.* [Gr. χολή (*cholé*) = the bile; γραφή (*graphé*) = a description.]

Med.: A description of and treatise on bile.

¶ An erroneous formation for cholography, from some confusion with Gr. χοληδόχος (*cholédochos*). [CHOLEDOCHUS.]

chŏl-ĕd-ŏl'-ŏg-ỹ, *s.* [Gr. χολή (*cholé*) = the bile, and λόγος (*logos*) = a discourse.] [CHOLOGRAPHY.]

Med.: A treatise or discourse on bile and the biliary organs.

chŏl-ĕ-ic, *a.* [Gr. χολή (*cholé*) = bile, and Eng. adj. suff. *-ic.*] Pertaining to, or of the nature of, bile.

cholcic acid, *s.*

Chem.: An acid obtained from bile, $C_{24}H_{40}N_2O_{10}$.

chŏl-ĕ-pyr'-rhin, *a.* [From Gr. χολή (*cholé*) = bile, and πυῤῥός (*purrhos*) = flame-coloured, from πῦρ (*pur*) = fire.]

chŏl'-ĕr (1), *s.* [Lat. *cholera*, from Gr. χολή (*cholé*) = the bile.]

I. *Lit.*: The bile.

II. *Figuratively*:

1. That humour which, when in excess, was supposed to cause irascibility of temper.

"It engenders *choler*, planteth anger."
Shakesp.: *Taming of the Shrew*, iv. 1.

2. Anger, rage.

"My *choler* is ended."—*Shakesp.*: *Love's Lab. Lost*, iii. 1.

chŏl'-ĕr (2). **chŏl'-lĕr, chŏl'-lĕr, chŭr'i,** *s.* [CHAUL, CHAVEL.]

1. A double chin.

2. (*Pl.*) *Chollers*: The gills of a fish; the wattles of a cock. (*Scotch.*)

"The second chief was a thick, sottered, corven pollack, of a great *chollier* under his cheeks, like an ill-crept bagpe."—*Journal from London*, p. 8.

chŏl'-ĕr-ą, *s.* & *a.* [In Dut. *cholera*; Fr. *cholera*; Lat. *cholera* = (1) the gall bile, (2) the jaundice; from Gr. χολέρα (*cholera*) = the cholera, from χολή (*cholé*) = bile.]

A. *As substantive*:

Med.: One of two or three diseases more or less akin to each other. They are—

1. *British Cholera*: A severe form of diarrhœa, somewhat resembling but quite distinct from Asiatic Cholera. [2.] It occurs usually during the summer months, and is due for the most part to deleterious food or drink taken into the body exciting the purging, vomiting, and cramps which characterise the complaint. Children often succumb to this disease; adults rarely

2. *Asiatic* or *Malignant Cholera*: A malignant disease due to a specific poison which, when received into the human body through the air, water, or in some other way, gives rise to the most alarming symptoms and very frequently proves fatal to life. An attack of cholera is generally marked by three stages, though these often succeed each other so rapidly as not to be easily defined. There is first a premonitory diarrhœa stage, in which the stools soon become very copious, watery, and rice-coloured, there is also occasional vomiting, with severe cramps in the abdomen and legs, and great muscular weakness. This condition is succeeded, and often within a remarkably short period, by the second stage, which is one of collapse, and is called the algid or cold stage. This is characterised by intense prostration, suppression of urine, great thirst, feebleness of circulation and respiration, with coldness and blueness of the skin, iciness of the breath, and loss of voice. Should death not take place at this the most fatal period, the sufferer will then pass into the third or reaction stage of the disease. This, though very frequently marked by a high state of fever, with a tendency to congestion of internal organs, as the brain, lungs, kidneys, &c., is a much more hopeful stage than that which has preceded it, and the chances of recovery are very much increased. Asiatic Cholera is so called from having had its home, so to speak, in the East, and more especially in India for centuries, though there is little doubt that under other names it had been previously epidemic in the United States and Great Britain. The nature of the disease was not fully recognised until the outbreak of 1831 occurred. Similar epidemics in 1848-49, in 1853-54, and in 1865 on have increased our knowledge of the mode of propagation of choleraic poison, and strict attention to the laws of sanitation will do much if not all to prevent it finding that habitat which appears necessary for its development into epidemic activity.

¶ *Spasmodic Cholera* is another name for Asiatic Cholera. [No. 2.]

"The malady known by the name of *spasmodic cholera* had been known in India from the remotest periods, and had at times committed fearful ravages. It efforts, however, were in general restricted to particular seasons and localities, and were not so extensively diffused as to attract notice or excite alarm. In the middle of 1817, however, the disease assumed a new form, and became a widely spread and fatal epidemic. It made its first appearance in the Eastern districts of Bengal, in May and June of that year, and after extending itself gradually along the north bank of the Ganges, through Tirhut to Bhaugpur, it crossed the river, and passing through Bewa, fell with peculiar virulence upon the centre division of the grand army, in the first week of November . . . During the week of its greatest malignity it was ascertained that seven hundred and sixty four fighting men and eight thousand followers perished."—*Mill's Hist. India*, Continuation by M. M. Wilson, viii. 358.

B. *As adj.*: Pertaining to cholera; designed for use in cholera, &c., as *Cholera poison*, *cholera mixture*.

cholera asphyxia, *s.* Also called Asiatic cholera, or *Cholera morbus*, the more malignant form of cholera.

cholera-pill, *s.* A pill containing one grain each of camphor, cayenne, and opium.

chŏl-ĕr-ā-ic, *a.* [Eng. *cholera*; *-ic.*] Pertaining to, producing, or produced by cholera, as "choleraic poison," "choleraic discharges."

chŏl'-ĕr-ic, *chŏl'-ĕr-ick, *a.* [Fr. *cholerique*, from Lat. *choléricus*; Gr. χολερικός (*choleriko*s), from χολή (*cholé*) = the bile.]

1. *Of persons*:

(1) Full of choler; passionate, irascible.

(2) Angry, enraged.

2. *Of the disposition, temper, &c.*: Inclined to passion; hot.

¶ The choleric or bilious temperament is characterised by black hair often curling, black or hazel eyes, and dark yet often ruddy complexion, a hairy skin, and a strong full pulse. It is the strong temperament of the melancous or swarthy variety of mankind.

*3. *Of things, words, &c.*:

(1) Offensive; calculated to cause passion or rage

(2) Full of passion; angry; caused by passion

"There came in *choleric* haste towards me about seven or eight knights."—*Sir P. Sidney*

***chŏl'-ĕr-ic-ly,** *adv.* [Eng. *choleric*; *-ly.*] In a choleric or passionate manner. (*Richardson.*)

***chŏl'-ĕr-ic nĕss, *chŏl'-ĕr-ick-nĕss,** *s.* [Eng. *choleric*; *-ness.*] The quality of being choleric; irascibility, passionateness

"subject to like passions for covetousness, contentiousness, and *cholericknesse*."—*Bishop Taunton*: *Anti-Brut Scotch.* p. 120 (1661).

chŏ lĕr'-i-form, *a.* [Eng. *cholera*; *-i* connect., and *form.*] Resembling, or of the nature of, cholera.

chŏl'-ĕr-ine, *s.* [Eng. *choler*(*a*), and suff. *-ine.*]

Medical:

1. The precursory symptoms of cholera.

2. The first stage of epidemic cholera.

chŏl'-ĕr-i-mā-tion, *s.* [As if from a verb to *cholerise.*] Inoculation with the specific poison of cholera, as a protective measure.

chŏl'-ĕr-oĭd, *a.* [Gr. χολέρα (*cholera*), χολερά (*choléra*) = cholera, and εἶδος (*eidos*) = appearance.] Resembling cholera, as choleroid discharges.

chŏl'-ĕs-tĕr-ate, *s.* [Eng. *cholester*(*ic*); *-ate.*]

Chem.: A salt of cholesteric acid.

chŏl-ĕs-tĕr'-ic, *a.* [*Infra*, *-ic.*] Pertaining to or obtained from a cholesterine.

cholesteric acid, *s.*

Chem.: An acid formed by treating cholesterine with nitric acid. It is in yellowish-white crystals, slightly soluble in water, but abundantly so in boiling alcohol.

chŏl-ĕs-tĕr-ine, chŏl-ĕs-tĕr-in, *s.* & *a.* [Fr. *cholestérine*, from Gr. χολή (*cholé*) = the bile, and στέαρ (*stear*) = fat.]

A. *As substantive*:

Chem.: $C_{26}H_{44}O = C_{25}H_{43}(OH)$. A monatomic aromatic alcohol, which occurs in small quantities in the bile, brain, and nerves. It forms the chief part of biliary calculi, obtained by boiling these in alcohol. It crystallises in colourless plates, which melt at 137° and sublime at 360°. It exists naturally in most animal liquids in a state of solution, also in many animal solids, as in the blood, the bile, the meconium, the brain and spinal cord. As an abnormal product it occurs in the crystalline form in the bile, biliary calculi, various dropsical effusions, the contents of cysts, pus, old tubercles, malignant tumours, the excrements, and expectoration of phthisis. In the vegetable kingdom it occurs in peas, beans, almonds, many seeds, &c. Cholesterine is insoluble in water and solution of potash, even when boiling; but soluble in ether and boiling alcohol, crystallizing on cooling. It is most easily procured from gall-stones (of which it is the chief constituent), by finely powdering them, then boiling the powder in alcohol, and filtering when hot, when the cholesterine will deposit on cooling in pearly scales. The crystals thus obtained are usually thicker than the natural plates. It is very sparingly soluble in cold alcohol and not at all in water.

B. *As adj.*: (See the compound).

cholesterine infiltration.

Med.: A form of degeneration which occurs for the most part in the liver, spleen, and heart, and which is characterised by the development or infiltration into these organs of a certain peculiar fatty or lardaceous matter said by some to be of the nature of cholesterine, by others to be of a starchy or albuminous character. The terms lardaceous, albumenoid, and amyloid are used to express the same conditions.

chŏl-ĕs-trā, *in compos. as a prefix.* [From Eng., &c. *cholestr*(*e*)(*ine*), with *o* connective.]

Chem.: Having Cholesterine as the less abundant chemical substance in its composition.

chŏl-ĕs-trō-phāne, *s.* [From Eng., &c. *cholestro* (q.v.); and Gr. φαίνω (*phaínō*) = to make to appear.]

Chem.: $C_8H_6N_2O_3$. A dimethyl-parabanic acid, obtained by the oxidation of caffeine, and by digesting silver parabanate with methyl-iodide.

chŏl-ĕ-vę, *s.* [From Gr. χωλαίνω (*chōlaínō*) = to become lame.]

Entom.: A genus of coleoptera, family Silphidæ. Twenty-four British species are enumerated in Sharp's catalogue (1871).

chŏl-i-ăm'b, chŏl-i-ăm'-bic, *s.* [Fr. *choliambique*, from Lat. *choliambus*; Gr. χωλίαμβος (*chōliambos*), from χωλός (*chōlós*) = lame, and ἴαμβος (*iambos*) = an iambus.]

Pros.: A verse having an iambus in the fifth foot, and a spondee in the sixth or last.

". . . his *choliambics* were accordingly . . . transposed into the brief compositions which have descended to us as Æsopian fables."—*Lewis*: *Cred. Early Roman Hist* (ed. 1855), ch. vi. § vol. i., p. 233.

chŏl'-ic, *a.* (Gr. χολή (*cholé*) = the bile, and Eng. suff. *-ic.*] Pertaining to, or obtained from bile.

cholic acid, *s.*

Chem.: $C_{24}H_{40}O_5$. Obtained by boiling the resinous mass precipitated by ether from an alcoholic solution of bile, with a dilute solution of potash for several hours, and decomposing the potassium salt by HCl. Cholic acid crystallises in tetrahedra. It gives a purple-violet colour with sugar and sulphuric acid.

chŏl'-in-ate, *s.* [*Cholin*(*ic*); and suff. *-ate* (*Chem.*) (q.v.).]

Chem.: A term for a combination of cholinic acid with a salifiable base.

chol-in-ic, *a.* [Gr. χολή (*cholē*) = the bile.] Pertaining to bile or obtained from it.

cholinic acid, *s.*

Chem.: A distinct substance obtained by digesting bilin with dilute hydrochloric acid. It is insoluble in water.

chŏl'-ō-chrome, *s.* [Gr. χολή or χόλος (*cholos*) = bile, and χρῶμα (*chrōma*) = colour.] The colouring matter of bile. [BILIRUBIN.]

chŏl-or-pĭn, *s.* [CHOLAPIN.]

chŏl-ŏ-ĭd, *s.* [Gr. χολώδης (*cholōdēs*) = like bile, from χολή (*cholē*) = the bile, and εἶδος (*eidos*) = appearance, form; and Eng. suff. *-ic.*] Pertaining to bile.

choloidic acid, *s.*

Chem.: $C_{24}H_{40}O_5$. A white amorphous acid, obtained by boiling glycocholic or taurocholic acid with concentrated sulphuric acid.

chŏl-ŏ-phæ'-in, *s.* [Gr. χολος (*cholos*) = bile, and φαιός (*phaios*) = brown.] The same as CHLOROPHYLL (q.v.).

cho-lŏm, *s.* [Hindustani.]

Bot. & Hort.: Indian Millet, *Sorghum vulgare* (formerly *Holcus Sorghum*), a grain cultivated in India and some other [illegible]

Cholonia, *s.* [Named in honour of Dr. J. [illegible] physician to Louis XV.]

Bot.: A genus of American shrubs, belonging to the order Cinchonaceæ.

[illegible]cho-ne-ite, *s.* [HONEA.]

chŏn-dac-ra, *s.* [Javanese.]

Bot.: *Eucarpus cupressinus*, a taxaceous plant, one of the best timber-trees of Java. (*Lindley.*)

chŏ'-næ, *s.* [Gr. χώνη (*chōnē*) = a funnel, from the shape of the flowers.]

Bot.: A genus of plants belonging to the order Ericaceæ, and consisting of a single small shrub with blood-red flowers. It is a native of the Cape of Good Hope.

chŏn-dăc-tăg, *s.* [Said to be from Gr. χονδρος (*chondros*) = grain, and δακτάω (*daktaō*) = to eat.]

Ornith.: The Lark-finch, a genus of finches placed next to Emberiza by Swainson. (*Craig.*)

chŏn-drą-căn-thăs, *s.* [Gr. χόνδρος (*chondros*) = cartilage, and ἄκανθα (*akantha*) = a spine.]

Zool.: A genus of Crustacea of the order Siphonostoma, and family Lernæopoda. *Chondracanthus Zei* is found upon the gills of *Zeus* (the Common Dory). The body is covered with short reflexed spines.

chŏn-drar'-sĭn-ite, chŏn-drō-ar'-sĭn-ite, *s.* [Ger. *kondroarsenit*: so named from its similarity to *Chondrodite* (q.v.), while differing from it in being an arsenate.]

Min.: A yellowish mineral, occurring in the Paisberg mines, Wermland. It is an arsenate of manganese. It is translucent and brittle.

chŏn'-dri-ą, *s.* [Gr. χόνδρος (*chondros*) = cartilage, from the cartilaginous structure.]

Bot.: A genus of marine Algæ, belonging to the tribe Florideæ.

chŏn-drĭl-la, *s.* [From Lat. *chondrilla*, *chondrillon*; Gr. χονδρίλλη (*chondrillē*) = a plant which exudes a gum: χόνδρος (*chondros*) = grain, cartilage, a small roundish mass.]

Bot.: A genus of composite plants, nearly allied to the lettuce (Lactuca). It has the achenes rough, and furnished at the base with five small scales. The plants are herbs, natives of South Europe, the East, and Siberia. The flowers are yellow and solitary. About twenty species are known. A grain like *lactucarium* is obtained in Lemnos from *Chondrilla juncea*. (*Lindley, &c.*)

chŏn'-drine, chŏn'-drin, *s.* [Gr. χόνδρος (*chondros*) = cartilage, and Eng. suff. *-in, -ine.*]

Chem.: A variety of gelatine obtained from the cartilage of the ribs and joints. It is less soluble in boiling water, and is precipitated from its solution by acetic acid, alum, and by acetate of lead. Its chemical formula is doubtful; it contains nearly 15 per cent. of nitrogen.

chŏn-drĭ-tăg, *s.* [Mod. Lat. *chondrus* (q.v.), and Gr., &c. suff. *-ites* (q.v.).]

Palæont.: A temporary genus of plants, allied to Algæ. It consists of plants somewhat resembling the sea-weeds of the recent genus *Chondrus*. (*Chondrites verticillatus* found in the Upper Silurian of Sweden.) An alleged fossil, *Chondrites acutangulus* of Mr. Cay, is found in Lower Silurian rocks at Bangor in Wales.

*5. To obtain.

"Such strengthe he him the *chos*
That prince of al the world he was."
Castel of Love, p. 1,837

II. *Technically :*

1. *Script.* : To adopt or select for a special purpose or position. [CHOSEN.]

"He chose David also his servant."—*Psalm* lxxviii. 70.

2. *Theol.* : To elect for eternal happiness.

B. *Intransitive :*

1. To make one's choice; to select, elect, or prefer.

"Thou may hal the wille if thou to lose *chose*."
Langtoft, p. 116.

2. To have the power or freedom of choice (generally with a negative, and meaning that the person spoken of has no alternative).

"Knaves abroad,
Who, having by their own importunate suit
Said or supplied them, they cannot choose but they must blab."
Shakesp. : Othello

¶ *To choose* : By or of choice.

"Be a lord *to choose*."—*Shakespeare : Pericles*, ii. 3.

¶ (1) Crabb thus distinguishes between *to choose* and *to prefer* : "To *choose* is to *prefer* as the genus to the species; we always *choose* in *preferring*, but we do not always *prefer* in *choosing*. To choose is to take one thing instead of another; to *prefer* is to take one thing before or rather than another. We sometimes choose from the bare necessity of *choosing*, but we never *prefer* without making a positive and voluntary *choice*. When we choose from a specific motive the acts of *choosing* and *preferring* differ in the nature of the motive. The former is absolute, the latter relative. We choose a thing for what it is, or what we esteem it to be of itself; we *prefer* a thing for what it has, or what we suppose it has, superior to another. . . . We calculate and poise in *choosing*; we decide in *preferring*. The judgment determines in making the *choice*; the will [illegible] . . . A wise prince [illegible] of his ministers, but [illegible] has mostly favourites whom he . . .

(2) He thus discriminates between *to choose*, *to pick*, and *to select* . . . in the former case the generic, the others are specific terms : *pick* and *select* are expressly different modes of *choosing*. We always *choose* when we *pick* and *select*, but we do not always *pick* and *select* when we *choose*. To *choose* may be applied to two or more things; to *pick* and *select* can be used only for several things. . . . To *choose* does not always spring from any particular design or preference; to pick and *select* signify to *choose* with care."

(3) The difference between *to choose* and *to elect* is thus stated : "Both these terms are employed in regard to persons appointed to an office, the former in a general, the latter in a particular sense. *Choosing* is either the act of one man or of many; *election* is always that of a number; it is performed by the concurrence of many voices. A prince *chooses* his ministers, the constituents *elect* their members of parliament. A person is *chosen* to serve the office of sheriff, he is *elected* by the corporation to be mayor. *Choosing* is an act of authority; it lends the person *chosen*; *election* is a voluntary act; the *elected* has the power of refusal. People are obliged to serve in some offices when they are *chosen*, although they would gladly be exempt. The circumstance of being *elected* is an honour after which they eagerly aspire . . . ." (*Crabb : Eng. Synon.*)

Wordsworth: Excursion, bk. iv.

* 3. Singing in a choir, or in harmony

"And *choral* nymphs sing the second day"
Amherst.

choral music, *s.* Vocal music in parts, as opposed to instrumental. (*Stainer & Barrett.*)

choral service, *s.* A service of song a service is said to be partly choral, when only canticles, hymns, &c., are sung; wholly choral, when, in addition to these, the versicles, responses, &c., are sung. (*Stainer & Barrett.*)

choral vicar, *s.* A lay vicar (q.v.).

† ȼhŏr'-ăl-ist, *s.* [Eng. *choral*; *-ist.*] A member of or a singer in a choir. (*Gent. Mag.*)

ȼhŏr'-ăl-lȳ, *adv.* [Eng. *choral*; *-ly.*]

1. In a style to be sung by a choir; in harmony.

". . . a modern composer would judge it if he chose to set the same words *chorally.*"—*Mason: Essay on Church Music,* p. 116.

2. In manner of a chorus.

"Marseillese sing their wild 'To Arms' in chorus; which now all men, all women and children have learnt, and sing *chorally*, in theatres, boulevards, streets; and the heart burns in every bosom."—*Carlyle: French Revol.,* pt. iii., bk. i., ch. i.

chord, *s.* [Fr. *corde*; Lat. *chorda*; Gr. χορδή (*chordē*) = an intestine of which strings were made. *Chord* and *cord* are essentially the same word. When the primitive meaning of a string of a musical instrument is preserved, the original A is retained; when a rope or string is meant it is dropped.] [CORD.]

I. *Ordinary Language:*

1. *Literally:*

(1) A string of a musical instrument.

"Who mov'd
Their stops and *chords*, was seen; his volant touch
Instinct thro' all proportions, low and high,
Fled and pursu'd transverse the resonant fugue"
Milton: P. L., bk. xi.

(2) A combination of musical sounds, consonant or dissonant. [II., 2.]

2. *Figuratively:* A combination.

"Is but passionate appealing,
A prophetic whisper stealing
O'er the *chords* of our existence."
Longfellow: Kyanthus.

II. *Technically:*

1. *Math.:* A straight line joining the extremities of an arc of a circle.

". . . because troops passing between any two parts move on the *chord* of an arc . . ." *Macdougall Modern Warfare as influenced by modern Artillery,* ch. vii.

2. *Music:* The simultaneous occurrence of several musical sounds, and producing harmony, such as the common chord, the chord of the sixth, of the dominant, of the diminished seventh, of the ninth (q.v.). (*Parry,* in *Grove's Dict. of Music.*)

chord (*pa. par.* **chorded**), *v t.* [CHORD, *s.*] To furnish with strings or chords; to string.

"What passion cannot music's raise and quell?
When Jubal struck the *chorded* shell,
His list'ning brethren stood around." *Dryden.*

chor'-dȩ (*pl.* **chordæ**), *s.* [Lat. *chordæ.*] [CHORD.]

1. *Anat.:* Any cord or chord like structure. [CHORDA DORSALIS.]

2. *Bot.:* A genus of Laminariaceæ (Fucoid Algæ), with fronds of a peculiar, simple, cylindrical form. Two species, *Chorda filum* and *C. lomentaria*, are found between tide-marks on British coasts. The former grows from one to twenty or even forty feet long, with the greatest diameter at half its length, of 1-4 to 1-2". The cord-like frond is tubular, but has at intervals thin diaphragms, formed by interwoven transparent filaments.

3. *Music:* [CHORD-MUSIC.]

chorda characteristica, *s.* with a.

Music: A chord of the seventh, in which a leading note appears. (*Stainer & Barrett.*)

chordæ dorsalis, *s.* with a.

Anat.: The embryonic representative of the spinal column of the Vertebrata; the perma-

sent spinal column of the lower Vertebrates. It sometimes forms a spindle-shaped, transparent, gelatinous-looking cord, with the broadest part near the tail; at others it is cylindrical or conical, rounded anteriorly and tapering posteriorly. It usually consists of an outer comparatively thick and firm structureless membrane, forming a sheath, and of pale nucleated cells, which fill the sheath. In some instances, however, its structure is fibrous, and that of the sheath fibro-membranous. The cells are mostly angular or polyhedral, and closely crowded. The Chorda Dorsalis is called also the Notochord, which is from two Greek roots, whereas Chorda Dorsalis is Latin.

"... the permanent chorda dorsalis or rudimentary spinal column of the early embryo."—*Todd & Bowman: Physiol. Anat.*, vol. i., ch. iv., p. 69.

chorda tympani, *s.*

Anat.: A small branch connected with the seventh or facial nerve.

chor'-dæ, *s. pl.* [Pl. of Lat. *chorda* (q.v.).]

chordæ essentiales, *s. pl.* with *s.*

Music: The tonic and its third and fifth; the key-chord. (*Stainer & Barrett.*)

chordæ tendineæ, *s. pl.* with *s.*

Anat.: Strong fine tendons closing the valves of the heart.

chordæ vocales, *s. pl.* with *s.*

Anat.: The vocal chords (q.v.).

chordæ Willisii, *s. pl.*

Anat.: Several bands crossing the superior longitudinal sinus of the brain obliquely at its inferior angle. (*Quain.*)

chor'-dal, *a.* [Eng. *chord*; *-al.*] Of the nature of, or pertaining to, a chord, esp. to the notochord.

chor-dar'-i-ę, *s.* [From Gr. χορδάριον (*chordárion*), dimin. of χορδή (*chordé*) = a string.]

Bot.: A genus of Chordariaceæ (Fucoid Algæ), remarkable for the solidity of the cellular texture of the filiform fronds. The so-called spores attached to the horizontal filaments are cosporanges, and discharge zoospores when mature. Trichosporanges have not yet been observed. *Chordaria flagelliformis*, Mull., is common on rocks and stones between tide-marks.

chor-dar'-i-ā'-çē-æ, *s. pl.* [Mod. Lat. *chordaria* (q.v.), and Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: A family of Fucoid Algæ. Olive-coloured sea-weeds, with a gelatinous or cartilaginous, branching frond, composed of vertical and horizontal filaments interlaced together, the cosporanges and trichosporanges attached to the filaments forming the superficial layers of frond.

chor-dā'-tą, *s. pl.* [Mod. Lat. from *chorda* (q.v.).]

Zool.: A primary division, embracing all animals that have, or have had, a notochord. Thus it includes (1) the true Vertebrates; (2) the Cephalochordata (the lancelet); and (3) the Urochordata, or Tunicates.

chor'-dāte, *a.* & *s.* [CHORDATA.]

A. *As adj.:* Belonging to or characteristic of the Chordata (q.v.).

B. *As subst.:* Any individual of the Chordata.

chor-dēn-lō'-dī-ŭn, *s.* [Gr. χορδή (*chordé*) = the chord of a lyre, and αὐλῳδός (*aulódos*) = singing to the flute.] A self-acting musical instrument, invented by Kauffmann, of Dresden, in 1812.

chord'-ed, *pr. par.* & *a.* [CHORD, *v.*]

chor-dee', *s.* [From Lat. *chorda.*] A painful contraction of the frænum.

chord'-ing, *pr. par.* & *s.* [CHORD, *v.*]

A. *As pr. par.:* (See the verb).

B. *As subst.:* The act of setting in accord; the state of being accordant.

chor'-dŏm-ē'-tĕr, *s.* [Gr. χορδή (*chordé*) = a chord, and μέτρον (*métron*) = a measure.]

Music: A gauge for measuring the thickness of strings.

chore (1), *s.* [CHAR, CHARE (1), *s.*] A little job, a turn of work.

chōre (2), *s.* [CHOIR, CHORUS.] A choir or chorus. (*B. Jonson.*)

chŏr'-ē-ą, *s.* [Lat. *chorea*; Gr. χορεία (*chorēia*) = a dance.] [CHORUS.]

Med.: More fully *Chorea Sancti Viti*, St. Vitus' Dance, a disorder of the nervous system usually occurring before puberty, and characterised by a peculiar convulsive action of the voluntary muscles, especially those of the face and extremities. (St. VITUS'S DANCE.]

chor-ē'-æ, *s.* [CHORUS.]

chŏ-rē-grăph'-ĭc, chŏ-rē-grăph'-ĭ-cal, *a.* [Eng. *choregraph(y)*; *-ic*, *-ical.*] Pertaining or relating to choregraphy.

chŏ-rēg'-rą-fy, *s.* [Gr. χορεία (*chorēia*) = a dance, and γράφω (*graphō*) = to write or discourse about.] [CHOROGRAPHY (2), *s.*] The art of representing dancing by signs, as singing is by notes. (*Craig.*)

chŏ-rē'-gĭa, *s.* [CHORAGUS.]

† **chŏ-rē'-gy,** *s.* [Gr. χορηγία (*chorēgia*) = the office of a choregus.] The office or duties of a choragus or choregus (q.v.).

"As a rich young man, also, choregy and trierarchy became incumbent upon him."—*Grote: Hist. Greece*, V., ch. lv.

chŏ-rē'-ĭc, *a.* [Lat. *chorea* (q.v.); *-ic.*] Of the nature of or pertaining to chorea, or St. Vitus' dance; convulsive.

"It began to suffer from choreic spasms of the left angle of the mouth and left arm."—*Ferrier: Functions of the Brain*, p. 201.

chŏr-ĕ-pĭs'-cō-pāl, *a.* [Formed from *chorepiscopus* (q.v.), on the analogy of *episcopal*, from *episcopus.*] Of or pertaining to a suffragan or local bishop.

"... the Valentinian heresy, episcopal and *chorepiscopal* power, and some emergent difficulties concerning them."—*Pull: Life of Hammond*, § 1.

chŏr-ĕ-pĭs'-cō-pŭs, *s.* [Lat., from Gr. χωρεπίσκοπος (*chōrepískopos*) = a local bishop, from χώρα (*chōra*) = a place, a district and ἐπίσκοπος (*epískopos*) = a bishop.] [BISHOP.]

Eccles.: A local or suffragan bishop, whose episcopal jurisdiction is limited to certain districts.

chŏ-rē'-tĭs, *s.* [Gr. χωρίτης (*chōrítis*) = rustic.]

Bot.: A genus of Mexican and Texan Amaryllidaceæ. The perianth has a long, slender, nearly straight tube, a reflexed limb of long narrow segments, and a large rotate coronel lacerated at the margin, the long filaments being spreading-connivent. *Choretis glauca* is a beautiful species, with black-coated bulbs, erect glaucous leaves, and three or four sessile flowers. *C. galvestonensis* is a smaller-flowered species from Texas. (*Treas. of Bot.*)

chŏ-rē'-trŭm, *s.* [Gr. χωρίτης (*chōrítis*) = rustic.]

Bot.: A genus of plants belonging to the order Sandalworts. The flowers have both pistils and stamens. The species are natives of New Holland, and are shrubs resembling our native broom.

† **chŏ-rē'-ŭs, chŏ-rē'-ŭs,** *s.* [Lat. *chorus*, *choreus*; Gr. χορεῖος (*chorrios*) = pertaining to a chorus or choir; χορός (*chorus*) = a dance, a choir; O. Fr. *chorée.*]

Ancient Prosody:

1. A foot of two syllables, the first long and the second short; more generally called a *trochee* (q.v.).

2. A foot of three short syllables, a *tribrach* (q.v.).

† **chŏr'-i-ămb, chŏr-i-ăm'-bŭs,** *s.* [Lat. *choriambus*; Gr. χοριαμβος (*choriambos*), from χορεῖος (*chorrios*) = a trochee, and ἴαμβος (*iambos*) = an iambus (q.v.).]

Anct. Pros.: A foot consisting of four syllables, of which the first and fourth are long, and the second and third short, thus combining the trochee and the iambus.

"... if you had asked him what 'religio' was, he would have replied at once that it was a *choriambus*."—*Mozley: Kingsley Fantomas*, Pt. i. ch. i.

chŏr-i-ăm'-bĭc, *a.* & *s.* [Lat. *choriambicus*; Gr. χοριαμβικός (*choriambikós*) = pertaining to a choriambus (q.v.).]

A. *As adj.:* Pertaining to or of the nature of a choriambus.

B. *As subst.:* A choriambus.

† **chŏr'-ĭc,** *a.* [Gr. χόριος (*chórikos*) = pertaining to a choir or chorus (q.v.).] Of or pertaining to a chorus; fitted for or sung by a chorus.

"A *choric* ode."—*Coleridge* in *Webster.*

chŏ-rĭ-dē'-mŭs, *s.* [Gr. χόριον (*chorion*) = skin, leather, and νῆμα (*néma*) = thread.]

Ichthy.: A genus of fishes belonging to the sub-family Centronotinæ, and family Scidæ.

chŏr'-i-ŏn, *s.* [Gr. χόριον (*chorion*) = skin, leather; Lat. *corium.*]

1. *Anat.:* The outer membrane which envelopes the fœtus in the womb.

"They are seen to form a close pall over the surface of the *chorion*."—*Todd & Bowman: Physiol. Anat.*, vol. i., ch. 14, p. 168.

2. *Bot.:* The external membrane of the seeds of plants.

chŏr-i-ŏn'-ĭc, *a.* [Eng. *chorion*; *-ic.*] Pertaining to the chorion (q.v.).

chŏr-i-pĕt'-ą-lŭm, *s.* [Gr. χωρίς (*chōris*) = apart, and πέταλον (*pétalon*) = a leaf petal.]

Bot.: A genus of scandent shrubs or trees of the Ardisiad order, distinguished amongst its allies by the petals being four and free, not united, as well as by its racemed flowers. The flowers are small, white or yellowish, borne in little axillary racemes: the berries, when ripe, are scarlet in colour. *Choripetalum undulatum*, a native of the temperate regions of the Himalayas, grows to a height of 60 feet.

chŏ-rĭs'-ĭ-ą, *s.* [Named in honour of J. L. Choris, the artist who accompanied Kotzebue round the world.]

Bot.: A genus of small prickly-stemmed trees of the Sterculiad family, peculiar to South America. The flowers are large, rose-coloured, 1—3 in number, and composed of a bell-shaped 3—5 lobed calyx; 5 narrow petals, covered with silky hairs; a double staminal tube, the outer bearing the barren, the inner the fertile stamens. The tough bark of *Chorisia crispiflora* is used in Brazil for making cordage; and the white cottony hairs of the seeds of *C. speciosa* are used by the Brazilians for stuffing pillows and cushions. The species are widely spread in Asia, Africa, and America. (*Treas. of Bot.*)

chŏ'-rĭ-sĭs, *s.* [Gr. χώρισις (*chōrisis*) = a separating: χωρίς (*chōris*) = apart, separately.]

Bot.: (See extract).

"Sometimes the parts of a flower are increased in number by the growth of additional parts, or by the splitting of organs during their development . . . This *chorisis* consists in the formation of two parts out of one, the separated parts being either placed one in front of the other by transverse *chorisis*, or side by side by collateral *chorisis*."—*Balfour: Botany*, p. 196.

chŏ'-rĭs-mŏs, *s.* [Gr. χωρισμός (*chōrismos*) = a separation, a parting.]

Bot.: A name formerly given to a genus of plants consisting of a single species, *Chorisma repens*, a little plant belonging to the Compositæ, and a native of the sandy sea-shore of China. It is nearly related to the Sow-thistles. It has been called *Chorisis repens*, and is now transferred to the genus Ixeris (q.v.). (*Treas. of Bot.*)

chŏr'-i-spŏr'-ę, *s.* [Gr. χωρίς (*chōris*) = separately, and σπόρα (*spora*) = a seed; in allusion to the seeds being enclosed separately in the pods.]

Bot.: A genus of annual plants, natives of Siberia and the Altai, with purple, white, or yellow flowers. They belong to the Cruciferæ (*Treas. of Bot.*)

chŏr'-ist, *s.* [Fr. *choriste.*] A chorister.

"Behold the great *chorist* of the angelical quire."—*Parthenia Sacra*, p. 180 (1653)

chŏr'-is-tėr, chŏr'-is-tėr, quĕr'-is-tėr, quĭr'-is-tėr, quēr'-ē-stėr, *s.* [Either from Fr. *choriste(r)*, with Eng. suff. *-er*, or from *choir* with suff. *-ster.*]

1. One who sings in a choir.

"Sometimes there are on the cathedral foundation minor canons, and always precentors, lay vicars, and *choristers*."—*A. Pomblanque, jun.: How we are Governed*, let. 10.

2. The leader of a choir. (*American.*)

† 3. A singer generally.

"Of airy *choristers* a numerous train
Attend his wondrous progress."
Dryden: Threnodia Augustalis, 203.

chŏr'-is-tēs, *s.* [Gr. χωριστής (*choristḗs*) = separating: χωρίς (*chōris*) = apart, separately.]

Bot.: A genus of much-branched shrubs, natives of Mexico, belonging to the Cinchonaceæ (Cinchonads).

† **chŏr-ĭs'-tĭc,** *a.* [Eng. *chorist*; *-ic.*] Of or pertaining to a choir; choral. (*Crabb.*)

chŏr-ĭs-tō-phyl'-lous, *a.* [From Gr. χωριστός (*chŏristos*) = separated; and φύλλον (*phullon*) = a leaf.]

Bot.: Separate leaved; having separate leaves.

chŏ-rĭs-tŏ-pŏd', *s.* [From Gr. χωριστός (*chŏristos*) = separated, and ποῦς (*pous*), genit. ποδός (*podos*) = a foot.]

Zool.: A crustacean, with the feet separated.

"We recognise three groups of the *choristopoda*."—*Dana: Crustacea*, pt. i., p. 17

chŏ-rĭ-stŭ'-lĭa, *s.* [Gr. χωρίς (*chŏris*) = apart, and στῦλος (*stulos*) = a style.]

Bot.: A genus of plants, natives of South Africa, belonging to the Escalloniaceæ. It consists of a single species, a shrub with panicles of small green flowers. The fruit is a capsule twisting into two pieces to liberate the many seeds it contains. (*Treas. of Bot.*)

chŏ-rĭ-zā'-tion, *s.* [Gr. χωρίζω (*chŏrizō*) = to separate: χωρίς (*chŏris*) = apart, separate.]

Bot.: The separation of a layer from the inner side of a petal, either presenting a peculiar form, or resembling the part from which it is derived. (*Balfour.*) Also called *unlining* by Lindley and *deduplication* by Henfrey. [CHOROSIS.]

chŏ-rĭ-zān'-tēs, *s. pl.* [Gr. nom. masc. pl. of the pr. par. of χωρίζω (*chŏrizō*) = to separate.] A name applied to those critics who deny the identity of the authors of the Iliad and the Odyssey.

"The *chorizontes*, so called because they separate the authorship of the Iliad from that of the Odyssey."—*Gladstone: Juventus Mundi*, ch. i.

chork, *v.i.* [CHIRK.] (*Scotch.*)

chorl, *s.* [Etym. doubtful.] The angle at the junction of the blade of a penknife with the square shank which forms the joint.

chŏr'-ō-bāte, chŏr-ŏb'-ə-tēs, *s.* [Gr. χώρα (*chōra*) = a place; and βάτης (*bătēs*) = traversing, βαίνω (*bainō*) = to go.] The Greek level. [LEVEL.]

chŏr'-ō-grăph, *s.* [Gr. χώρα (*chōra*) = a district, a place, and γράφω (*graphō*) = to write, to describe.] An instrument contrived by Professor Wallace, of Edinburgh, "To determine the position of a station, having given the three angles made by it to three other stations in the same plane whose positions are known." (*Knight.*)

* **chŏr-ŏg'-rə-phər,** *s.* [Gr. χωρογράφος (*chōrographos*) = describing countries: χώρα (*chōra*) = a country, a place; γράφω (*graphō*) = to write, to describe, and Eng. suff. *-er.*]

1. One who describes or plans particular districts or countries.

". . . the others should indeed be termed topographers or *chorographers* . . ."—*Fielding: Joseph Andrews.*

2. A geographical antiquarian or critic who, in the comparison of modern with ancient geography, investigate the locality of places mentioned in the old writers, and discusses the question of name, or which the site, and sites for which the name, is uncertain.

"Places unknown better harped at in Camden and other *chorographers*."—*Milton: Hist. Eng.*, bk. iv.

chŏr-ō-grăph'-ĭc, * chŏr-ō-grăph'-ĭ-cəl, *a.* [Eng. *chorograph(y)*; *-ical.*] Pertaining to chorography; descriptive of particular regions or countries.

"I have added a *chorographical* description of this terrestrial Paradise."—*Raleigh: History of the World.*

chŏr-ō-grăph'-ĭ-cəl-lȳ, *adv.* [Eng. *chorographical*; *-ly.*] In a chorographical manner; according to the rules and principles of chorography.

"I may perhaps be found fault withal, because I do not *chorographically* place the funeral monuments in this my book."—*Weever: Anc. Fun. Mon. Great Britain, Ireland, and Islands adjacent.*

chŏ-rŏg'-rə-phy (1), *s.* [Fr. *chorographie*; Lat. *chorographia*, from Gr. χωρογραφία (*chorographia*) = a description of countries or regions: χώρα (*chōra*) = a district, a region; γραφία (*graphia*) = an account, from γράφω (*graphō*) = to write, to describe.] The science or practice of describing various countries or regions, or of laying down their limits and boundaries on maps. It is thus distinguished from, and has a wider meaning than, *topography*, which deals with the description and history of single places.

"I think there might be good use made of it for *chorography*."—*Walton: Relig. Walton.*, p. 200.

* **chŏ-rŏg'-rə-phy** (2), *s.* [Gr. χόρος (*choros*) = a dance: γραφία (*graphia*) = a description, γράφω (*graphō*) = to write, describe.] A description of or treatise on dancing. [CHOREOGRAPHY.]

"A Treatise of *Chorography* or the Art of Dancing Country Dances after a new character, . . ."—*From the French of M. Feuillet. . . . By John Essex* (1710).

chŏr'-ŏid, *a.* & *s.* [Gr. χοροειδής [χίτων] (*chŏroeidēs* [*chitōn*]) = the grape-coloured coating of the eye: χόριον (*chorion*) = skin, leather, and εἶδος (*eidos*) = form, appearance.]

A. *As adjective:*

Anat.: Resembling the chorion; an epithet applied to several membranes, especially to the plexus and web of the *pia mater*, and to the inner tunic of the eye.

"The *choroid* coat of the eye."—*Todd & Bowman: Physiol. Anat.*, vol. i., ch. ii., p. 68.

"The *choroid* arteries which supply the *choroid* plexus."—*Ibid.*, ch. x., p. 204.

B. *As substantive:*

Anat.: The vascular, as opposed to the specially nervous, portion of the retina.

"The optic nerve penetrates the sclerotic. . . . The *choroid* is thick, and coloured by a deep-brown pigment."—*Owen: Anatomy of Vertebrates.*

choroid coat, *s.*

Anat.: A vascular membrane, black on the inner side, lining the sclerotic portion of the eyeball.

choroid membrane, *s.*

Anat.: A thin membrane which extends from the entrance of the optic nerve to near the anterior margin of the sclerotica, where thickening, it becomes the ciliary body, and is continued into the iris.

choroid plexus, *s.*

Anat.: A congeries of blood-vessels upon the lateral ventricle of the brain. (Often in the plural *plexuses.*)

"In the lateral and fourth ventricles it (the spinal membrane) forms projecting processes or folds, somewhat fringed, highly vascular, and invested by epithelium derived from the membrane which lines the ventricles. These processes are called the *choroid plexuses*."—*Todd & Bowman: Physiol. Anat.*, vol. i., ch. x., p. 204.

chŏr-ŏĭ'-dal, *a.* [Eng. *choroid*; *-al.*] The same as CHOROID, *a.* (q.v.).

choroidal fold, *s.*

Anat.: A fold appearing to enclose the lens of the eye, but so as to leave an aperture or depression below. (*Quain.*)

choroidal fissure, *s.*

Anat.: The same as choroidal fold (q.v.) (*Quain.*)

chŏr-ŏ-ĭ-dī'-tĭs, *s.* [From Gr. χοροειδής (*chŏroeidēs*), for χοριοειδής (*chŏrioeidēs*) [CHOROID], and suff. -ιτις (*itis*), denoting inflammation.]

Med.: Inflammation of one of the investing tissues of the eyeball, called the choroid. This highly vascular and pigmentary membrane is seldom the seat of inflammation, but when it does occur it is characterised by pain in and around the eye, intolerance of light, tearfulness, displacement of the pupil, and, as the disease proceeds, the cornea and the whole eyeball swell and protrude. Hectic and emaciation are the common accompaniments of the latter condition, and the digestion throughout is very much impaired. Chronic choroiditis is marked by a very peculiar alteration and variation which takes place in the colour of the eye, and which has been called by Desmarres *choroide tigree.*

chŏ-rŏl'-ō-gĭst, *s.* [Eng. *chorology*; *-ist.*] One versed in chorology; a student of faunal and floral areas.

chŏ-rŏl'-ō-gȳ, *s.* [Gr. χώρη (*chōrē*) = a district, county; λόγος (*logos*) = a discourse, λέγω (*legō*) = to tell, to describe.]

1. The science or act of describing localities; chorography.

2. The geographical and topographical distribution of animal and vegetable species.

"The answer . . . would represent its distribution or *chorology*."—*Huxley: Croonian*, p. 46.

chŏr-ŏ-mă'-nĭ-ą, *s.* [Gr. χόρος (*chorus*) = a dance, and μανία (*mania*) = madness.] The dancing mania of the Middle Ages.

† **chŏr-ŏm'-ĕt-rȳ,** *s.* [From Gr. χώρα (*chōra*) = a place . . . a country; o connective, and μέτρον (*metron*) = a measure.] The art of surveying a country. (*Nuttall.*)

chŏr'-ŏn-ĭs, *s.* [From Gr. χωρίζω (*chōrizō*) = to separate.]

Bot.: Deduplication, the division of an organ into a pair or cluster. It may be produced in two ways, the first, called *collateral chorisis*, takes place when an organ is replaced by two or more situated on the same plane, and in which case the organs stand side by side as in tetradynamous stamens; and *vertical chorisis*, when the organs produced stand one before the other, as in the "crown," or two-lobed appendage, inside the blade of the petals of Silene. (*R. Brown*, 1874.) [CHORIZATION.]

chŏr-ŏ-pō'-mą, *s.* [Gr. χορός (*chorus*) = a dance, and πῶμα (*pōma*) = a drink; said to have been so named by its discoverer, M. Labillardiere, in allusion to the joyful feelings of the party which he accompanied in the exploration of Western Australia, on meeting with a supply of water, in the vicinity of which he discovered the plant.]

Bot.: A genus of pretty bushes, natives of Western Australia, belonging to the polyflowered Leguminosæ. The plants are often to be met with in greenhouses, more than a dozen species being in cultivation, of which the most beautiful are *Chorozema Henchmani*, with long terminal leafy racemes of a beautiful red colour; *C. speciabile*, a twiner of great beauty, producing long drooping racemes of orange-coloured flowers, which appear in the winter months; *C. cordatum*, a plant very common in gardens: the flowers, in loose racemes, are red, the standard spotted with yellow at the base; and *C. Dicksoni*, a handsome plant with larger flowers than the others there are upwards of twenty species known. (*Treas. of Bot.*)

* **chŏrp,** *v.i.* [CHIRP.] (*Scotch.*)

chŏr'-ŭs, *s.* [Lat., from Gr. χορός (*chorus*) = a dance in a circle, accompanied with song; a choir.]

I. *Ordinary Language:*

1. *Literally:*

(1) In the same sense as II. 1.

"The Grecian tragedy was at first nothing but a *chorus* of singers: afterwards one actor was introduced."—*Dryden.*

(2) A number of persons singing in concert.

"My melancholy voice the *chorus* join'd."
Wordsworth: Karamoos, bk. iii.

(3) A concerted piece of music, sung by a number of singers together.

(4) The verses of a song, &c., in which an audience or company joins the singer.

"Each boatman, bending to his oar,
With measured sweep the burthen bore,
In such wild cadence, as the breeze
Makes through December's leafless trees.
The *chorus* first could Allan know."
Scott: The Lady of the Lake, ii. 18

2. *Figuratively:*

(1) A unanimous and loudly-expressed declaration of opinions or sentiments.

* (2) An interpreter of events; one who explains.

"*Ophe* You are a good *Chorus*, my Lord.
Ham. I could interpret between you and your love: if I could see the puppets dallying."
Shak: Hamlet, iii. 2.

II. *Technically:*

1. *Gr. Drama:* The chorus was probably originally a company of dancers in a ring. In later times a choric performance implied the singing or musical recitation of a poetical composition, accompanied by appropriate dancing and gesticulation. As choral performances were especially cultivated in all the Dorian states, and particularly in Sparta, the Dorian dialect came to be regarded as the appropriate dialect for such compositions. Arion, a contemporary of Periander, first gave the chorus a regular choral form. It consisted of about fifty men or youths, who joined round the altar of Dionysus. From these cyclic choruses was developed the Attic

tragedy. [TRAG., s.] The exact number of the chorus in the times of the earlier tragic poets is uncertain; from Sophocles onwards the regular number was fifteen. It was arranged in a quadrangular form, and entered the theatre by a passage to the right of the spectators in three lines. To guide them in their evolutions lines were marked upon the boards of the orchestra. The functions of the chorus in the Greek tragedy were very important. It acted the part (1) of a dispassionate and right-minded spectator, inculcating the lessons of morality and resignation to the will of heaven, as taught in the piece being acted; and (2) of a guide to explain events supposed to happen in the intervals between the acts and scenes. In comedy the number of the chorus was twenty-four, consisting half of males and half of females.

2. *Music:* (1), (2), & (3). The same as I. 1, (2), (3), & (4).

Christ, *s.* [Lat. *Christus*; Gr. χριστός (*christos*) = anointed, and χρίω (*chriō*) = to anoint.]

The Anointed One: The appellation given to Our Lord as His official title, and corresponding to the Hebrew Messiah (q.v.).

"And he saith unto them, But whom say ye that I am? And Peter answereth and saith unto him, Thou art the *Christ*."—*Mark* viii. 29.

¶ Used in the plural to signify persons who would pretend to be the true Christ.

"For false *Christs* and false prophets shall rise, . . ."—*Mark* xiii. 22.

¶ The two names, *Jesus Christ*, are not analogous to a modern Christian name and surname; in reality the great Being so designated had but one personal appellation—Jesus: Christ being superadded at a later period to designate his office, function, or mission. Jesus, Gr. Ἰησοῦς (*Iēsous*), is the equivalent of the Heb. יְהוֹשׁוּעַ or יֵשׁוּעַ (*Yehoshua*), i.e., Joshua, meaning Jehovah-Saviour, Deliverer, or Helper. [Jesus.] It was borne by the military leader in the wars of Canaan (Joshua i.—xxiv., actually called Jesus in the authorised version of Acts vii. 45, and Heb. iv. 8), by Jesus surnamed Justus, a fellow-labourer with Paul (Col. iv. 11), and by about a dozen of other persons figuring in the pages of Josephus; in fact the name seems to have been not uncommon among the Jews. But we learn from St. Matthew that in this particular case the appellation was given previous to birth by Divine authority. ". . . thou shalt call his name *Jesus*, for he shall save his people from their sins." The year [Christian era], the month, and the day [Christmas], when the child Jesus was born are matters of more or less uncertainty, not having been recorded with precision at the time. The salient features, however, of the life thus begun were narrated by four evangelists [Evangelists], who are believed by the immense majority of Christians to have written with infallible accuracy and trustworthiness under the guidance or inspiration of the Spirit of God. [Inspiration.]

The circumstances heralding or attendant upon the birth of John, afterwards the Baptist, and the miraculous conception and nativity of Jesus, the last-named event at Bethlehem, are told at length by St. Luke (Luke i. ii.); while St. Matthew relates the visit of the Magi, the slaughter of the infants at Bethlehem, and the flight of the holy family to Egypt (Mat. ii.).

These occurrences took place while Augustus, the first Roman Emperor, was upon the throne (Luke ii. 1). Thirty years later, under the reign of Tiberius, John, now grown to full manhood, appeared in the wilderness of Judea, as an ascetic and preacher of repentance, the necessity of which he urged on the ground that the kingdom of heaven was at hand. Those who confessed their sins he baptised in the river Jordan, and thus a new religious community arose, separated to a certain extent from the ordinary professors of Judaism (Mat. iii. 1—10, Luke iii. 1—14). Some suspected that he might be the "Christ" or "Messiah" of ancient prophecy, but he disclaimed the honour, indicating that he was but the forerunner of another who should baptise with the Holy Ghost and with fire, that is as with fire. (Mat. iii. 11, 12; Luke iii. 16; John i. 20—28.)

Meanwhile Jesus, now about thirty years of age, had come forth from the obscurity in which he had hitherto resided at Nazareth. (Luke ii. 51, iii. 23.) Having sought and obtained baptism from John, with Divine recognition as the Son of God, and having overcome temptation in the wilderness, He without further delay addressed Himself to His life-work in the world. (Matt. iii. 13—17, iv. 1—11; Luke iii. 21, 22, iv. 1—14.) He claimed to be the Messiah spoken of by holy men of old (Dan. ix. 25, 26, &c.), nay more, to be, in one sense, the subordinate (John x. 29), and in another the equal of His Heavenly Father (v. 30). His ministry, whilst not ignoring repentance (Luke xiii. 3—5), was one chiefly of faith (John iii. 14—19) and love (John xiii. 34; Matt. v. 43—46). Twelve apostles (Matt. x. 1—6), and afterwards seventy other disciples, were chosen to aid him in his ministry (Luke x. 1, &c.), the former baptizing converts as they arose (John iv. 2). John the Baptist saw his own reputation pale away under the greater glory of his Divine successor, but never allowed this to evoke jealousy within his breast (Matt. iii. 11; Luke iii. 15; John i. 15, 27, 29, iii. 28—31), and when his faithfulness in reproving sin, even in high places, led to his suffering a martyr's death (Matt. xiv. 3–12), his baptized followers, either at once or gradually, transferred themselves to Jesus (John i. 35—37; Acts xix. 1—5).

The latter holy teacher thus left alone, continued His ministry, it is believed, for about three years in all, chiefly at Capernaum and other places near the Lake of Galilee (Matt. iv. 13; Luke vii. 1), as well as in other places of that province (Luke vii. 11, &c.; Matt. xvi. 13), in Perea beyond Jordan (Matt. xix. 1; Mark x. 1; Luke viii. 37), in Samaria (John iv. 1—42), beyond the Holy Land in Phenicia (Mark vii. 24), and, chiefly on occasions of the great festivals, at Jerusalem, which necessitated His visiting other parts of Judea (Matt. xx. 29; John ii. 23, vii. 1, 2, 10). He supported His claims to be the Messiah by miracles of knowledge, i.e., prophecies (Matt. xx. 19, &c.; Luke xix. 41—44) and miracles of power, such as healing the sick (Matt. ix. 35, &c.), nay, even raising the dead (Mark v. 22—43; Luke viii. 41—56; John xi. 1—44).

The chief priests and other dignitaries who held sway in the Jewish synagogues, were stirred up nearly to madness by jealousy of His success, and eagerly accepted the offer of an unworthy apostle, Judas Iscariot (i.e., apparently of Kerioth in Judea) to betray his Lord. A manufactured charge of blasphemy led to the condemnation of Jesus by His deadly foe, the high priest, but as the power of life and death now rested not with the Jewish authorities, but with the Roman governor, Pontius Pilate, a charge of disaffection to the imperial government was manufactured, as it was felt that the heathen Roman would not attach any weight to the alleged blasphemy. The procurator had discernment to see clearly that what he was required to do was to sanction a judicial murder, and for some time refused to become partner in the Jewish ruler's guilt. But as the cry, "Crucify him," "crucify him," continued to rise from the multitude, he resolved to avoid unpopularity at the expense of moral principle, and gave sentence that it should be as the Jews required. The crucifixion therefore took place (Matt. xxvii.; Mark xv.; Luke xxiii., John xix.). Friday was the day when the nefarious deed was done, and three days later, or early on Sunday morning, news was brought to the Apostles, and the Church generally, by certain women of their company who had visited the sepulchre, that a resurrection had taken place (Matt. xxviii.; Mark xvi.; Luke xxiv; John xx., xxi.). At a subsequent interview with their risen Lord He gave the Apostles and their successors a commission to make disciples of all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost (Matt. xxviii. 19, &c.); and about forty days after the crucifixion He led them out as far as Bethany and lifted up His hands and blessed them. "And it came to pass, while he blessed them, he was parted from them, and carried up into heaven" (Luke xxiv. 50, 51.). He had predicted His own death, His resurrection on the third day (Matt. xx. 19), and His ascension (John xx. 17), and had intimated that at a future period He would again return to the earth in glory (Matt. xxvi. 64, &c.) For the leading dates connected with the life of Christ, see Christian Era; for more details regarding the doctrines, and for the subsequent history of the Christian Church, see Christianity.

Christ-cross, * **criss-cross**, * **crist-cross**, *s.* Mark of the cross, as cut, painted, written, or stamped on certain objects. (*Latham.*)

Bot. : *Scolopendrium vulgare*.

Christ's-herb, *s.*

Bot. : *Helleborus niger*.

Christ's-ladder, * **Christis-ledere**, *s.*

Botany :

1. *Erythræa Centaurium*. Prior suggests that it was originally called *Christ's gall* or *Christs schale* = Christ's-cup, which being mistaken for *Christi scala* gave rise to the latter popular name.

2. A local name in Cheshire for *Crataegus Pyracantha*. (*Britt. & Holland.*)

Christ's-thorn, *s.*

Bot. : *Paliurus aculeatus*, a plant so called from its being believed by many to be the plant from which the crown of thorns was made which was placed on the head of Our Saviour. It is a common plant in Palestine, and being very pliable, is capable of being woven

into any shape. The fruit has a singular appearance, resembling a head with a broad-

A. *Transitive*:

1. To receive into the Christian Church by baptism, at which a Christian name is given to the child baptized.

¶ The term is limited by some to the portion of the church service at which the reception into the church is made. Thus a child may be baptized privately, but the ceremony of receiving into the church or christening is done publicly in a consecrated building.

". . . children might be *christened*, if such were the wish of their parents, . . ."—*Macaulay: Hist. Eng.*, ch. xi.

*2. To christianise, to convert to Christianity.

"I am most certain this is the first example in England since it was first *christened*."—*Jeremy Taylor: Discourse on Extempore Prayer.*

3. To name, to denominate; to give a name to.

"Where such evils as these reign, *christen* the thing what you will, it can be no better than a mock millenium."—*Burnet*

4. To use for the first time. (Often said of a cup.)

B. *Intrans.*: To be competent to administer the rite of baptism.

"This should not exempt them . . . nay, though they should *christen* and receive the sacrament therein."—*Aylife: Parergon*, 466.

christ'-en-dŏm, *christ'-en-dŏm, *crist-in-dom, *cryst-yn-dame, *crist-ene-dom (*t* silent), *s.* [A.S. *cristendom, crist-nen-dom.*]

*1. Baptism, from the idea, formerly almost universally entertained, that the administration of baptism made a man a Christian.

"Sothli me ben sepulcre buriid with him be *Cristendom*. [Vulg. per baptismum.]"—*Wyclife: Rom.* vi. 4.

*2. Christianity, the Christian religion.

"By Saint Austyn to Englonde broughte *cristendom*."—*R. Gloucester*, 60.

*3. The name received at baptism; a Christian name; hence, any appellation or name.

4. That portion of the world in which Christianity is the recognised or prevailing religion, or which is governed in accordance with Christian doctrines, as opposed to heathen or Mohammedan countries.

christ'-en-ing (*t* silent), *pr. par.*, *a.*, & *s.* [CHRISTEN.]

A. *As pr. par.*: (See the verb).

B. *As participle. adj.*: Pertaining to, or connected with, the ceremony of christening.

C. *As subst.*: The act or ceremony of admitting into the Christian Church, or of naming generally.

Christ'-i-an, * crist-en, * cryst-yne, crist-ene, *s.* & *a.* [A.S. *cristen*; O. Sax. *kristin*; O. Fris. *kristen*; O. Icel. *kristinn*; Sw. *kristen*; Da. *christen*; O. Fr. *christian, christien*; Fr. *chrétien*, all from Lat. *christianus*; Gr. χριστιανος (*christianos*), from χριστος (*christos*) = Christ. Trench draws attention to the fact that we never in the New Testament find the word applied to the followers of Jesus, except by their adversaries, and that it was not introduced till the preaching of Paul to the Gentiles of Antioch, and other causes, showed that the disciples of the Crucified One indicated by their devout Master aimed at making their religion that of the entire world. The application of the name Christian showed that the faith so designated was perceived to be not a Jewish sect, but a religion freed from nationality or from locality, that it might better discharge its mission to the world. (*Trench: On the Study of Words*, pp. 99,100.)]

A. *As substantive*:

1. One who believes or professes the religion of Christ; a follower of Christ.

"This Makometh was a *cristen*."—*Langland: P. Plowman*, 10,418.

"The disciples were called *Christians* first in Antioch."—*Acts*, xi. 26.

2. One who is born in a Christian country or of Christian parents.

3. *Plural*:

(1) A name assumed by a denomination in the United States, to express their alleged renunciation of all sectarianism. They are rather numerous. They have no creed, nor authority in matters of doctrine, but leave to each individual the interpretation of Scripture, and the determination thereby of his belief. They may be regarded as a sect of Unitarian Baptists (gen. pron. **Christ'-i-ans**).

(2) In the British Registrar-General's lists for 1881 of religious denominations having certified places of worship in England and Wales, the two following occur—(*a*) Christians owning no name but the Lord Jesus; and (*b*) Christians who object to be otherwise designated.

B. *As adjective*:

1. Believing in or professing the religion of Christ.

"*Cristene* men ogen ben to fighte."—*Genesis and Exodus.*

". . . the most *Christian* barbarian who had perpetrated on Christians outrages of which his infidel allies would have been ashamed."—*Macaulay: Hist. Eng.*, ch. xi.

¶ There exist a considerable number of minor religious sects, having an appellation beginning with the adjective Christian. In the United States we have the Christian Connection (otherwise Christians, or Disciples of Christ), and the Christian Union, or, more fully, The Church of Christ in Christian Union. Each has over 100,000 members. In England and Wales there are the Christian Believers, Brethren, Disciples, Elisaites, Unionists, &c.

2. Pertaining to Christ or his religion.

3. Pertaining to the Church of Christ; ecclesiastical.

"In briefly recounting the various species of ecclesiastical courts, or, as they are often styled, Courts *Christian*, I shall begin with the lowest."—*Blackstone: Commentaries.*

4. Civilized.

¶ *The most Christian king*, a title bestowed by Pope Gregory the Great upon Charles Martel, and retained by subsequent French kings, as the great supporters of the Church.

"William declared aloud at his table before many persons that he would make *the most Christian King* repent the outrage. . . ."—*Macaulay: Hist. Eng.*, ch. vii.

Christian architecture, *s.* The introduction of Christianity naturally had its effect on the style of architecture adopted for religious buildings. The Roman Early Christian style appeared first in basilicas and circular churches. The former were, doubtless, originally built on the model of the Roman basilicas [BASILICAS], but the requirements of the new religion soon necessitated various modifications in the original plan. The Christian basilicas were constructed generally with three aisles: the central one broader than the others, the left or north being reserved for males, and the right or south for females. Sometimes we find five aisles. The building terminated in a semi-circular apse. The decorations consisted of paintings and mosaics, used mainly in the apse. The pillars were generally of the Corinthian order. [CORINTHIAN.] Symbols were largely introduced. These were the cross, the monogram of Christ, a lamb or a dove, as typifying the Holy Spirit, and a fish, used as a symbol of Christ from the letters of the Greek word ἰχθύς (*ichthus*) = a fish, forming the initials of the titles of our Lord, Ἰησοῦς Χριστὸς Θεοῦ Υἱὸς Σωτήρ (*Iesous Christos, Theou Huios, Soter*) = Jesus Christ, the Son of God, the Saviour. The roofing was of beams with flat panelling, frequently gilt. The altar stood at the east end in front of the apse. The space round the altar was railed off and called the sanctuary. Adjoining the entrance was generally a narrow space called the Narthex. [NARTHEX.] In the middle of a portico in front of the building was a bowl for washing the hands. [CANTHARUS.] A crypt was constructed under the altar for the reception of the bones of the patron-saint. The most magnificent specimen of Byzantine architecture is the Church of St. Sophia at Constantinople, built originally by Constantine, and rebuilt after its destruction by fire, by Justinian in the sixth century. [BYZANTINE.] Russian church architecture was at first a deterioration of Byzantine, modified in the fifteenth century, by the introduction of bulb-shaped domes, adopted from the Tartars. The Gothic, or Pointed style, the most familiar to us in religious architecture, is distinguished by the pointed arch, formed of two segments of a circle meeting in a point. [GOTHIC.] The Perpendicular and Flamboyant styles are deteriorations of the Gothic [FLAMBOYANT, PERPENDICULAR], deriving their names from the form of the tracery, of the windows, and ornaments. The Classic styles of architecture have been comparatively rarely adopted in church architecture. The Cathedral of St. Paul, which by its dome recalls St. Peter's at Rome, is an example of the Renaissance, or revived Roman style. In plan, English churches generally form a Latin cross, consisting of a nave, transepts, and chancel—(see these words)—their direction being almost invariably east and west. In a few isolated instances, such as St. Sepulchre's, at Cambridge, the plan is circular.

Christian courts, *s. pl.*

Law: The same as ECCLESIASTICAL COURTS.

Christian Endeavor.

A non-sectarian religious organization founded in February, 1881, by the Rev. Francis E. Clark, D.D., at Portland, Maine, with an original membership of less than fifty. In 1896 the movement had extended to nearly every foreign country and missionary land, was endorsed by thirty-two Christian denominations, with 43,579 societies organized and a total membership of about 2,600,000. The local branches comprise those of the Young People, Junior, Intermediate, Senior, Mothers, Parents, &c., collectively termed, in their respective countries, the United Society of Christian Endeavor. An international organization, known as the World's Union of Christian Endeavor, has been recently organized, with a view to holding a general convention every three years, the first convention being held in Washington, D. C., in July, 1896. Rev. Dr. Clark, the founder of this remarkably successful enterprise, is President of the United Society in this country, also of the World's Union.

Christian era, *s.*

Chron.: The era or epoch introduced by the birth of our Lord. It was calculated back about the year 532, by a monk, Dionysius Exiguus, the latter word, meaning little, being assumed either because his stature was diminu-

tive or because he modestly believed his mental powers small, which they were not. It is thought that he fixed the advent too late by four years, and that consequently Jesus was born, if the contradiction in terms can be permitted, in B.C. 4. Mr. J. W. Bosanquet considers that it was in B.C. 2. On these views the year 1883 of the Christian era is really 1886 or 1885. The Christian era is sometimes called the Dionysian era.

Christian name, *s.* The name given to a child on its admission into the Christian Church at baptism, as distinguished from the surname or family name.

Christian period, *s.*

Archæol.: The period from the introduction of Christianity till now. It varies in different countries, as for instance in Syria and in England.

Christian science, *s.* A religious and mental healing system which originated about 1866 in Boston, and has spread to some small extent. It teaches "the reality and allness of God, the unreality and nothingness of matter."

Christian scientist, *s.* One who believes in Christian-science.

* **Chris'-ti-an,** *v.t.* [CHANTRY.] To convert to Christianity; to baptize.

* **Chris'-ti-an-ism,** *s.* [Fr. *christianisme*; Lat. *christianismus*, from Gr. χριστιανισμός (*christianismos*) = the profession of Christianity.]

1. Christianity, the profession of the Christian religion.

2. Christendom; the nations professing Christianity.

christ'-i-an-ite (1), *s.* [Named after Prince Frederick of Denmark, who explored Vesuvius in company with the discoverers Monticelli and Covelli, with suff. *-ite* (*Min.*) (q.v.).]

Min.: a variety of Anorthite occurring at Mount Vesuvius in isolated blocks among the old lavas; also in the Faroe Islands and Java.

christ'-i-an-ite (2), *s.* [Named after Christian VIII. of Denmark, with Eng. suff. *-ite* (*Min.*) (q.v.).]

Mineralogy:

1. The same as ANORTHITE (q.v.).

2. *Christianite of Descloizeaux:* The same as PHILLIPSITE (q.v.).

Chris-ti-an'-i-ty, * **cris-ti-en-te,** * **cryste-an-te,** * **cris-tan-te,** *s.* [O. Fr. *crestienté, crestienté*; Fr. *chrétienté*, from Lat. *christianitas.*]

1. Christendom; the professors of the Christian religion.

2. The Christian religion; the doctrines and precepts taught by Christ.

¶ To take a comprehensive view of Christianity, attention should be given to (1) its doctrines, (2) its government and discipline, and (3) its history from the time that it was introduced into the world until now.

(1) *The Doctrines of Christianity:* Though the professors of Christianity have separated into many sects, as have the Mohammedans, the Brahmanists, and others, yet all but a small minority are really at one with respect to certain great fundamental doctrines. Christians believe in a Supreme Being—the one living and true God. The immense majority hold that it is not inconsistent with monotheism to accept the tenet that in the Divine Unity there is a Trinity, the Father, the Son, and the Holy Spirit, to all of whom worship of the highest kind can be paid. Jesus Christ is identified by them with the second person of the Godhead, and is held to be at once God and Man. As God He existed from eternal ages, and was not first brought into being when born at Bethlehem. They consider that He was miraculously conceived by the Holy Ghost, and that His mother remained the Virgin Mary after having brought Him into the world. The reason why He came to this earth is held to have been that He had been commissioned by His Eternal Father to undertake a mission of mercy to the earth. Another tenet of their faith represents man as having been created innocent, but to have fallen, and now to be guilty and in need of a Saviour. Christ is believed to have been that Divine Saviour. His life on earth is regarded as having been perfect, so that He constitutes the exemplar for all mankind. His death is held to have been an atonement for sins not His own, and to have been so important that to it all Jewish ceremonies and symbols and all Messianic prophecy, as with a finger, pointed. Faith in His Divine mission and work, and specially on the efficacy of His death, are insisted on to put sinners in possession of the benefits purchased by their Redeemer's death. The historic facts of His resurrection and ascension are pointed to as evidences of the sanction and acceptance of His work by His Heavenly Father, and implicit trust is expressed in His coming again agreeably to His promise to earth, and in His ultimately becoming the Judge of the world. At the final assize it is believed that those whose good deeds show that they have believed in Him, shall be rewarded by eternal felicity, whilst everlasting misery shall be in store for those who have been faithless and wicked. The acceptance of this creed by man in his fallen state, is held to be impossible without Divine assistance, and it is considered that the Holy Ghost, if solicited, will give the requisite spiritual power to produce faith in the most unbelieving heart. The Scriptures of the Old and New Testaments are regarded as possessing inspiration in a sense in which no other book has it, and as being, therefore, in the highest degree fitted to enlighten inquiring minds as to religious duty.

(2) *The government and discipline of Christianity:* [For these see CHURCH GOVERNMENT.]

(3) *The history of Christianity:* [For this see CHURCH HISTORY.]

¶ Christianity is part of the law of England, though certain statutes in its support, now regarded as persecuting, have either been allowed to fall into desuetude, or have been formally annulled. Similar laws, making offences against Christianity punishable existed in some of the Colonies, but no such statutes can exist in the United States.

chris-ti-an-i-ni'-tion, chris-ti-an-i-sa'-tion, *s.* [Eng. *christianis(e); -ation.*] The act of converting to Christianity. (*Chr. Obs.*)

chris'-ti-an-ize, chris'-ti-an-ize, *v.t. & i.* [Fr. *christianiser*; Low Lat. *christianizo*, from Gr. χριστιανίζω (*christianizō*) = to make Christian, χριστιανός (*christianos*) = Christian.]

A. *Transitive:*

1. To make Christian, to convert to Christianity.

* 2. To adapt to Christianity or Christian doctrines.

"The principles of Platonick philosophy, as it is now *christianized*."—*Dryden.*

* **B.** *Intrans.:* To become Christian.

"Prester John . . . doth in some sort devoutly *christianize*."—*Spiteuter: Colonies*, 379. (*Davies.*)

A. & **B.** *As pr. par. & particip. adj.:* (See the verb.)

C. *As subst.:* The act or process of making Christian; christianization.

Chris'-ti-an-like, *a.* [Eng. *christian; -like.*]

1. *Of things:* Befitting a Christian.

"... avoids them with great discretion, or undertakes them with a most *Christian-like* fear."—*Shakesp.: Much Ado*, ii. 3.

2. *Of persons:* Like a Christian.

"Although the duke was enemy to him,
Yet he, most *christian-like*, laments his death."
Shakesp.: 2 Henry VI., iii. 2.

* **Chris'-ti-an-ly,** * **cris-ten-ly,** *adv. & a.* [Eng. *Christian*; Mid. Eng. *Cristen*; and suff. *-ly.*]

A. *As adv.:* Like a Christian; in a manner befitting a Christian.

"This child Maurice was siththen emperour
Imaad by the pope and lyved *cristenly*."
Chaucer: C. T. 5,541.

B. *As adj.:* Christianlike; befitting a Christian.

"Father he hight and he was in the parish; a
christianly plaintuous
Clothed from his head to his foot the old man
of seventy winters."
Longfellow: The children of the Lord's Supper.

* **Chris'-ti-an-ness,** *s.* [Eng. *Christian*; *-ness.*] The quality of being Christianlike or in accordance with Christian teaching.

"... and in like manner to judge the *christianness* of an action by the law of natural reason, ..."
Beaumont: Of Conscience, § 20.

* **chris-ti-an-o-graph'-y,** *s.* [Gr. χριστιανός (*christianos*) = a Christian, γραφία (*graphia*) = a description, γράφω (*graphō*) = to describe.] An account and description of Christian countries and sects.

"In my *christianography* you may see divers sites plac."—*Puplit: Herodiography*, p. 64.

* **Chris-tie'-ô-list,** *s.* [Lat. *Christicola*; from *Christus* = Christ, and *colo* = to worship.] A worshipper of Christ.

* **Chris'-tide,** *s.* [Eng. *Christ(mas)*, and *tide* (q.v.).] Christmas-tide.

"It [ivy] floweth not till July, and the berres ne not ripe till *Christide*."—*Culpepper: Eng. Paper*, p. 139.

chris-tis-ô'-ni-a, *s.* [Named after Sir Robert Christison, Bart., M.D., &c., Professor of Materia Medica in the University of Edinburgh.]

Bot.: A genus of parietic plants, containing ten or twelve species, and belonging to the order *Orobanchaceæ*. They are natives of India.

* **Christ'-less,** *a.* [Eng. *Christ*; *-less.*] Having no faith in Christ; without the spirit of Christ; unchristian.

"And a million horrible echoes broke
From the red-ribbed hollow behind the wood,
And thundered up into heaven the *Christless* code
That must have life for a blow."
Tennyson: Maud, xxii. 1.

Christ'-mas (t silent), * **cristmes,** * **cristmesse,** * **crystesmas,** * **chrystmas,** * **cristesmasse,** *s. & a.* [A.S. *Crist* = Christ; *mæsse* = mass, festival.]

A. *As substantive:*

1. The festival of the Nativity of Christ, observed by the Christian Church yearly on the 25th December.

¶ Augustine considered the fast of Good Friday, and the festivals, Easter, Ascension, and Whitsuntide, as the only holy days which had an Apostolic origin and the sanction of a general council. Christmas he deemed to be of later origin and lesser authority. When the first efforts were made to fix the period of the year when the advent took place, there were, as we learn from Clement of Alexandria, advocates for the 20th May, and for the 20th or 21st April. The Oriental Christians generally were of opinion that both the birth and baptism of Jesus took place on the 6th of January. Julian I., bishop of Rome from A.D. 337—352, contended for the 25th December, a view to which the Eastern Church ultimately came round, while the Church of the West adopted from their brethren in the East the view that the baptism was on the 6th of January. When the festival was at length placed in December, it afforded a substitute to the various nations who had observed a festival of rejoicing that the shortest day of the year had passed, besides spanning over the great interval between Whitsuntide of one year and Good Friday of the next. Coming to the Roman Christian converts in lieu of the saturnalia, to which they had been accustomed while yet they were heathens, its purity became sullied almost at the first by revelry which had crept into it from this source. Similarly the Yule log, the mistletoe, &c., among ourselves, are relics of an older faith.

2. The season of Christmas, i.e., from Christmas-eve to Old Christmas-day, or Twelfth-night, January 6th.

"The psyche festes are at *Cristemesse*."—*Ayenbite of Inwyt*, p. 218.

† 3. The holly (*Ilex aquifolium*), or other decorations for Christmas. (*Skinner & Barnhill.*)

B. *As adj.:* Pertaining to or in use at Christmas.

"Here was a consort!
(Knowing aforehand of our merriment)
To dash it like a *Christmas* comedy."
Shakesp.: Love's Labour's Lost, v. 1.

Christmas-box, †

* 1. A little box in which presents were collected at Christmas.

"When time comes round, a *Christmas*-box they bear,
And one day makes them rich for all the year."
Gay: Trivia.

2. A present given at Christmas.

Christmas-card, *s.* An ornamented card, having on it a few words of Christmas greeting to the friend to whom it is sent. Not much known prior to the decade 1870—1880. Christmas-cards during that period came so much into use as to inflict upon postmen an amount of extra labour second only to that of Valentine-day.

Christmas carol, *s.* A song of praise sung at Christmas.

Christmas-day, *s.* [Christmas, I.]

Christmas-eve, *s.* The eve of Christmas-day; the night of December 24th.

Christmas-flower, *s.*

Botany:

1. *Helleborus niger.* [Christmas-rose.]

2. *Eranthis hyemalis.*

***Christmas-herb,** *s.*

Bot.: *Helleborus niger.* (*Lyte.*)

Christmas-music, *s.*

Music:

1. Cantatas, the words of which are suitable to Christmas.

2. Music played by waits. [Waits.] (*Stainer & Barrett.*)

Christmas-rose, *s.*

Bot.: A plant, *Helleborus niger*, order Ranunculaceæ, so called from its flowering at Christmas; also called *Christmas-flower* (q.v.).

Christmas-tale, *s.* A tale, generally fictitious, told at Christmas. It would originally be done at the family gathering around the Yule log, but is now done better in the Christmas numbers of the several popular periodicals.

Christmas-tide, *s.* The season of Christmas.

Christmas-tree, *s.* A small tree, generally a young fir, on the branches of which presents for children are hung at Christmas.

chris-tō-lŏg'-ĭ-cal, *a.* [Eng. *christolog(y)*: *-ical.*] Of or pertaining to Christology.

Chris-tŏl'-ō-gy, *s.* [Gr. Χριστός (*Christos*) = Christ; λόγος (*logos*) = a discourse, λόγω (*legō*) = to tell, to discourse.] A discourse concerning Christ, or the doctrines of the Christian Church.

"The reader will find in this author an eminent excellence in that part of divinity which I make bold to call *Christology*, in displaying the great mystery of godliness, God the Son manifested in human flesh."—*French: On the Study of Words*, p. 138.

chris-tō-lyte, *s.* [Gr. Χριστός (*Christos*) = Christ, and λύω (*luō*) = to loose.] One of a sect of Christians in the sixth century, who held that, when Christ descended into hell (Hades), He left both His body and soul there, and rose with His Divine nature alone. (*Ogilvie.*)

***chris-tom,** *a.* [A mistake for *chrisom* (q.v.).]

chris-tŏph'-an-y, *s.* [Gr. Χριστός (*Christos*) = Christ, and φαίνω (*phainō*) = to bring to light, to make to appear.] An appearance of Christ, used especially of His several appearances to His disciples between His resurrection and His ascension.

"The order in which he enumerates his *christophanies*."—*Brown: Life of Jesus; Trans.* (1846), § 138.

christ'-ō-phite, *s.* [From St. Christophe mine at Breitenbrunn, where it is found; and suff. *-ite* (*Min.*) (q.v.).]

Min.: A brilliant black blende, a variety of Sphalerite or Blende (q.v.). Sp. gr., 3·91–3·923.

chrō-ăn'-tą-cōn, *s.pl.* [Gr. χρόα or χροιά (*chroa* or *chroia*) = colour, and ἄνταικος (*antaikos*) = a crab.] A class of pellucid gems, comprehending all those of variable colours, as viewed in different lights. (*Webster.*).

chrō'-mą-scope, *s.* [Gr. χρώμα (*chrōma*) = colour; σκοπέω (*skopĕō*) = to view, to examine.] An instrument to exhibit the three optical effects of colours: (1) The refraction of prisms and lenses; (2) The transmission of light through transparent media; (3) The reflection of speculums.

chrō'-māte, *s.* [Chromium.]

Chromate of iron:

Min.: The same as *Chromite* (q.v.).

Chromate of lead:

1. *Chem.:* $PbCrO_4$. A lead salt of chromic acid. [Chromium.]

2. *Min.:* The same as Crocoite (q.v.).

3. *Dyeing, &c.:* The various chromates of lead are used to give yellow and red colours.

Chromate of lead and copper:

Min.: The same as Vauquelinite (q.v.).

Chromate of potassium:

Chem., &c.: The potassium salt of chromic acid, much used, as is the bichromate, in calico-printing, and for making pigments. Soluble chromates are detected by giving a yellow precipitate with plumbic acetate, a crimson red precipitate with argentic nitrate, and by forming green solutions of chromic chloride, Cr_2Cl_6, when boiled with alcohol and hydrochloric acid. A dry chromate heated with NaCl and strong H_2SO_4 gives off orange-red vapours of chlorochromic acid. Insoluble chromates fused with potassium nitrate yield K_2CrO_4 potassium chromate.

chrō-măt'-ic, *chrō-măt'-ick, *a.* [Fr. *chromatique*; Lat. *chromaticus*, from Gr. χρωματικός (*chrōmatikos*) = suited for colour, χρώμα (*chrōma*) = colour.]

1. Relating to colour, or colours; coloured.

"Those actions often display themselves in *chromatic* phænomena of great splendour."—*Tyndall: Prog. of Science*, 3rd ed., vi. 114.

2. Pertaining to a scale of semitones in music; including notes not belonging to a diatonic scale. [Chromatic scale.]

chromatic aberration, *s.*

Optics: (See extract).

"In the refracting telescope . . . the different refrangibility of the different coloured rays presents an obstacle to the extension of their power beyond very moderate limits. The focus of a lens being shorter as its refractive index is greater, it follows that one and the same lens refracts violet rays to a focus nearer to its surface than red. . . . If the paper be held in the focus for mean rays, or between the vertices of the red and violet cones, these will then form a distinct image, being collected in a point: but the extreme, and all the other intermediate rays, will be diffused over circles of sensible magnitude, and form coloured borders, rendering the image indistinct and hazy. This deviation of the several coloured rays from one focus is called *chromatic aberration*."—*Encyclopædia Metropolitana: Light.*

chromatic chord, *s.*

Music: A chord which contains a note or notes foreign to diatonic progression. (*Stainer & Barrett.*)

chromatic harmony, *s.*

Music: Harmony made up of chromatic chords. (*Stainer & Barrett.*)

chromatic interval, *s.*

Music: An interval which is augmented or diminished. (*Stainer & Barrett.*)

chromatic modulation, *s.*

Music: Modulation in which, by means of chromatic harmony, there is a passing into an extreme key. (*Stainer & Barrett.*)

chromatic printing, *s.* The art of printing in colours. [Chromotype.] (For a description of the process, see *Knight: Dict. of Practical Mechanics*, i. 544.)

chromatic scale, *s.*

Music: A scale which proceeds by semitones.

chromatic thermometer, *s.* When the edge of a rectangular plate of glass is applied to a piece of heated metal, or other substance having a temperature different from that of the glass, and exposed to a beam of polarised light, coloured fringes are developed. As the different tints depend on the different temperatures of the glass (which is supposed to be known), and that of the object to which it is applied, the colour of the central fringe affords a means of inferring approximately the temperature of the substance. (*Knight.*)

chromatic type, *s.* Type made in parts, which are inked of various colours and separately impressed, so as to unite into a variegated whole.

***chrō-măt'-ĭ-cal-ly,** *adv.* [Eng. *chromatical*; *-ly.*] In a chromatic manner.

"Among sundry kinds of music that which is called *chromatically* delyghteth, enlargeth, and joyeth the heart. . . ."—*Holland: Plutarch*, p. 1,023. (Rich.)

chrō-măt'-ĭ-cal-ness, *s.* [Eng. *chromatic*, with sign of plural in Gr. χρωματικὰ (*chrōmatika*)] (See extract.)

"The science which examines and explains the various properties of the colours of light and of natural bodies, and which forms a principal branch of optics, has been properly denominated *chromatics*, from the Greek word χρώμα, which signifies colour."—*Rees: Cyclopædia: Colour.*

chrō-mą-tĭd'-ĭ-ŭm, *s.* [Gr. χρώμα (*chrōma*), genit. χρώματος (*chrōmatos*) = colour; εἶδος (*eidos*) = appearance.] The colouring matter of plants.

chrō'-mą-tĭşm, *s.* [Gr. χρωματισμός (*chrōmatismos*) = a colouring, a dyeing.]

Bot.: The same as Chromism (q.v.).

chrŏm-ą-tō-dys-ŏps'-ĭ-ą, *s.* [Gr. χρώμα (*chrōma*), χρώματος (*chrōmatos*) = colour; δυς (*dus*) = bad, and ὄψ (*opa*) = the eye.]

Med.: The same as Chromatopseudopsia (q.v.).

***chrō-mą-tŏg'-raph-y,** *s.* [Gr. χρώμα (*chrōma*) = colour; γραφή (*graphē*) = a writing, a treatise, γράφω (*graphō*) = to write, to describe.] A discourse or treatise on chromatics.

***chrō-mą-tŏl'-ō-gy,** *s.* [Gr. χρώμα (*chrōma*) = colour; λόγος (*logos*) = a discourse.] A treatise on colours. (*Field.*)

chrŏm-ą-tō-mĕt-ą-blŏps'-ĭ-ą, *s.* [Gr. χρώμα (*chrōma*), χρώματος (*chrōmatos*) = colour, and μεταβλέπω (*metablepō*) = to look from one place to another.]

Med.: The same as Chromatopseudopsia (q.v.).

chrō-mą-tŏm'-ĕ-tĕr, *s.* [Gr. χρώμα (*chrōma*) = colour, and μέτρον (*metron*) = a measure.] A scale for measuring the degrees of colours.

chrō-măt'-ō-phōre, *s.* [Gr. χρώμα (*chrōma*), χρώματος (*chrōmatos*) = colour, and φορέω (*phoreō*) = to bear.]

1. *Zoology:*

(1) A pigment-cell in the skin, to which the change of colour in some animals is due.

(2) One of the blue, bead-like bodies in the common Sea-anemone (*Actinia mesembryanthemum*).

2. *Bot.:* An inclusive name for the granules in the protoplasm of plants.

chrŏm-ą-tŏph'-ĕr-ous, *a.* [Eng. *chromatophor(e)*; *-ous.*]

1. Containing pigment.

2. Having chromatophores.

chrŏm-ą-tō-pseū-dŏp'-sĭs, *s.* [Gr. χρώμα (*chrōma*), χρώματος (*chrōmatos*) = colour, and ψευδο- (*pseudo*) in compos. = false, &c.]

Med.: A term used synonymously with chromatodysopsia and chromatometabiopsia to signify a defect in the power of distinguishing different colours. [Colour-Blindness.]

chrō'-mą-trope, chrō'-mō-trope, *s.* [Gr. χρώμα (*chrōma*) = colour; τροπή (*tropē*) = a turning, τρέπω (*trepō*) = to turn, to twist.] An arrangement in a magic-lantern similar in its effect to the kaleidoscope. The pictures are produced by brilliant designs being painted upon two circular glasses, and the glasses being made to rotate in different directions.

chrō'-mą-type, *s.* [Gr. χρώμα (*chrōma*) = colour; τύπος (*tupos*) = type.

Photog.: A process in which the chromic acid is deoxidized. There are several modes of getting photographs by the chromic salts, preferably the bichromate of potash. (Also attrib.)

chrŏm-chlŏr'-ite, *s.* [Gr. χρώμα (*chrōma*) = colour, and Eng. *chlorite.*]

Min.: A reddish-violet micaceous mineral from Texas; a variety of Penninite (q.v.).

chrōme, *s. & a.* [Chromium.]

chrome-alum, *s.*

Chem.: $K_2SO_4Cr_2(SO_4)_3{}_24H_2O$. It is a crystallisable purple double salt of sulphate of chromium and sulphates of potassium, sodium or ammonium, having the formula of common alum, the alumina being replaced by sesquioxide of chromium.

chrome-colour, *s.* Properly, any colour prepared from the salts of chromium, but

generally applied to any colour which, when dry, is of a soft powdery consistence, and may be mixed with oil without grinding. (*Ogilvie.*)

chrome-green, *s.* A pigment of a beautiful dark-green colour, prepared from the oxide of chromium.

chrome-iron, *s.* [Chromium.]

chrome-ochre, *s.*

Min.: A clayey material, containing some oxide of chrome. It occurs of a bright-green shade of colour. Compos.: Silica, 57·0—64·0; alumina, 23·5—30·00; oxide of chromium, 2·00—10·5; sesquioxide of iron, 0·00—3·5; water, 0·00—11·6. (*Dana.*)

chrome-orange, *s.* A pigment of a dark-orange colour, prepared from the subchromate of lead.

chrome-red, *s.* A pigment of a beautiful red colour; a basic red chromate.

chrome-yellow, *s.* A yellow pigment of various shades prepared from lead chromate. [Chromium.]

chrōme, *v.t.* [Chrome, *s.*]

Dyeing: To treat (as wool) with bichromate of potash.

chro-meid'-ō-scope, *s.* [Gr. χρῶμα (*chrōma*) = colour; εἶδος (*eidos*) = form, appearance; σκοπέω (*skopeō*) = to see.] The same as Desmoscope (q.v.).

chrō'-mic, *a.* [Eng. *chrom(e)*; *-ic.*] Pertaining to chrome, or prepared from it.

chromic acid, *s.*

Chem.: Chromium trioxide, $CrO_3 + H_2O$, a substance obtained from chromium, much used by dyers and calico-printers for dyeing orange or red colours. It may be prepared by adding gradually from 120 to 180 parts, by volume, of pure concentrated sulphuric acid to 100 parts of a cold saturated solution of bichromate of potash. The crystals of the trioxide separate as the solution cools. The mother liquor should be poured off, and the crystals dried upon a tile; they may be purified by recrystallization from solution in water. With excess of sulphuric acid, chromic acid is a valuable reagent for dissolving the intercellular substance of plants; it is also much used in organic chemistry as a powerful oxidizing agent. Chromic acid is readily decomposed by organic matter, as dust, &c., and must therefore be preserved in a well-stoppered bottle. Its aqueous solution, which should be of a pale-yellow colour, is used for hardening and preserving nervous and muscular tissues, &c. It should be prepared when required. Chromic acid, H_2CrO_4, only exists in solution. It dyes wool and silk yellow, but will not dye cotton. Chromic acid boiled in wine dyes wool a clear brown colour, if no colouring matter, acted upon by chlorine acid, has been added to the wine.

chromic iron, chromic iron ore, *s.*

Min.: The same as Chromite (q.v.).

chromic mica, *s.*

Min.: The same as Fuchsite (q.v.).

chrō'-mid, *s.* [Chromidæ.] Any fish of the family Chromidæ (q.v.).

chrōm'-i-dæ, *s. pl.* [From Mod. Lat. *chromis* (q.v.), and fem. pl. adj. suff. *-idæ.*]

Ichthy.: A family of Pharyngognathous fishes. They have fleshy lips, and the lateral line interrupted. They are found mostly in fresh water in the hotter parts of the world, though one species is in the Mediterranean.

chrō-mi-ōm'-ē-tēr, *s.* [Gr. χρῶμα (*chrōma*) = colour, and μέτρον (*metron*) = a measure.] An instrument for determining the purity of water by its colourlessness. It consists of a glass tube of about a yard in length, closed at the end by a cork, and resting upon a white dish of porcelain. A green tinge is produced by minute algæ, a white opacity often by fungoid growths; iron salts are indicated by a peculiar ochry colour. (*Knight.*)

chrō'-lōs, *s.* [Gr. χρῶμα (*chrōma*) = colour.]

Ichth'y: The type genus of the family Chromidæ (q.v.).

chrōm'-ism, *s.* [Gr. χρῶμα (*chrōma*) = colour; and Eng. suff. *-ism.*]

Bot.: An abnormal colouring of plants. It is called also Chromatism.

chrō'-mite, *s.* [Eng. *chrom*, and suff. *-ite* (*Min.*).]

Min.: An isometric mineral of a submetallic lustre; colour between iron-black and brownish-black, streak brown; opaque, and brittle. It is widely distributed in America, Asia Minor, &c. Hardness, 5·5; sp. gr., 4·321. Comp.: Protoxide of iron, 16·0—38·95; magnesia, 0·0—18·13; oxide of chromium, 29·51—68·38; alumina, 0·0—19·94; silica, 0·0—10·00. (*Dana.*)

chrō'-mi-ūm, *s.* [Gr. χρῶμα (*chrōma*) = colour.]

Min.: A metallic tetrad element discovered by Vauquelin in 1797; symbol, Cr.; atomic weight, 52·2; sp. gr., 6. The chief ore of this metal is chrome-iron, $FeOCr_2O_3$, found in the Shetland Islands, and a lead chromate $PbCrO_4$. The metal is obtained by the action of sodium vapour on red-hot chromium trichloride. It forms hard grey cubic crystals, infusible, insoluble in concentrated acids. Chromium forms with oxygen the following oxides:—CrO, Cr_2O_3, Cr_3O_4, CrO_3. All compounds of chromium are prepared from the chromates. Chrome-iron ore is fused with carbonate of potassium and chalk, and the fused mass is treated with water, and a soluble yellow chromate of potassium, K_2CrO_4, is obtained; it crystallises in yellow rhombic anhydrous crystals, isomorphous with potassium sulphate; it dissolves in 2 parts of water at 16°; its solution is of a strong yellow colour, even when dilute. *Chromium dichromate*, or bichromate of potassium, $K_2Cr_2O_7$, is obtained by adding sulphuric acid to the chromate; it crystallises red triclinic crystals; it is used for making pigments. It dissolves in 10 parts of water at 16°. Lead chromate, $PbCrO_4$, a fine yellow precipitate, is obtained by adding a soluble lead salt to a solution of potassium chromate; it is called *chrome-yellow*. By heating it with saltpetre it is converted into a basic red chromate, called *orange-chrome* or *chrome-orange*. Chromium trioxide CrO_3 is formed by adding excess of H_2SO_4 to potassium chromate; it forms soluble red needle crystals, which are reduced by organic matter to *sesquioxide of chromium*. By heating to redness potassium dichromate it is converted into neutral chromate and *sesquioxide of chromium*, Cr_2O_3, which is a beautiful green powder, giving a green colour to glass and porcelain; it is nearly insoluble in acids. The pigment used to produce a pink colour on earthenware is made by heating to redness a mixture of thirty parts of peroxide of tin, ten of chalk, and one of potassium chromate; the product is powdered, and washed with hydrochloric acid. The hydrated oxide can be obtained as a green precipitate by adding ammonia to one of its salts. Chromic chloride Cr_2Cl_6 and chromic sulphate $Cr_2(SO_4)_3$ are obtained by dissolving the hydrated oxide in the acid. The salts of chromium sesquioxide exist in green and in violet-red modifications. Potassium dichromate is easily reduced by boiling it with hydrochloric acid and alcohol to chromium sesquichloride and chloride potassiuta. When sulphuric acid is used, chrome-alum, a double sulphate of chromium and potassium, is obtained, which has a deep violet tint. *Chromium monoxide* chromous oxide, CrO, absorbs oxygen rapidly; it is only known in the form of hydrate $Cr(OH)_2$. *Chromium dichloride*, $CrCl_2$, is a powerful deoxidizer. Chromium salts are easily detected by giving in both the inner and outer blowpipe-flame green beads with borax, by forming a yellow soluble salt when fused with an alkali, which is converted into a deep solution by reducing agents. Ammonia gives a green precipitate with the sesquichloride. Potash and soda hydrates give a precipitate of $Cr_2(OH)_6$, soluble in excess, reprecipitated on boiling. Ammonium sulphide precipitates the hydrated green sesquioxide of chromium $Cr_2(OH)_6$. Chromium can be detected in the presence of the other metals of this group, by fusing the precipitate with KNO_3, or platinum-foil, treating the fused mass with water, filtering, acidifying with acetic acid, and adding plumbic acetate, which precipitates yellow plumbic chromate.

chrō'-mō (1), *in compos.* [Gr. χρῶμα (*chrōma*) = colour.]

chromo-lithograph, *s.* A lithograph printed in colours.

chromo-lithograph, *v.* To produce chromo-lithography.

chromo-lithographer, *s.* A pr of chromo-lithographs.

chromo-lithography, *s.* The printing chromo-lithographs.

(1) *Hist.:* Colour-printing was first Europe in illuminating missals and playing-cards, but it was not successful was combined with lithography, invented tween A.D. 1796 and 1800 by Aloïs of Prague.

(2) *Present Process:* An outline-drawing first traced, then various stones are one for each colour, to which the drawing transferred. Then the artist puts in colours, with soap, of the tints required. the slab is put upon the press and dam after which the oil colour is applied wit leathern roller; the parts which contac drawing, being wet, resist the ink, while drawing itself, being oily, repels the w while retaining the colour.

chromo-lithographic, *a.* Pertain to, or executed in, chromo-lithography.

chromo-cyclograph, *s.* A colou picture produced by a succession of wo blocks, each bearing its separate colo [Chromatic Printing.]

chrō'-mō (2), *s.* [See def.] A contractio chromo-lithograph (q.v.).

chromo-type, *s.*

1. *Printing:* A sheet printed in colou The modes are various, but the usual pan to prepare a block for each colour, or a fe for each colour, and to place the paper up each in succession, the exact place being p served at each impression by means of regis pins or a similar device. [Chromatic Pan 180; Chromo-lithography.]

2. A photographic picture produced in t natural colours. This was long sought Niepce de St. Victor, and he announced h success even with yellow, but no way h been discovered of fixing these heliochro pictures. (*Knight.*)

chrō'-mō-grāph, *s.* [Gr. χρῶμα (*chrōma*) colour, and γράφω (*graphō*) = to write.] A instrument used for obtaining several copi of written matter. A substance is prepare by heating gelatine and water with glycerine and then adding any insoluble white powde to make it firm. It is poured while hot int a shallow tin, and it sets on cooling into a tra mass. It is used as follows. The letter, &c is written on paper, and a solution of anilin dye is used instead of ink. This is the pressed on the slightly damped surface of the chromograph, to which the writing is trans ferred, and from it many copies of the origina can be obtained. Common forms of chromo graphs have been formed by using glue and treacle, &c.

chrō mō-lāp'-tis, *s.* [Gr. χρῶμα (*chrōma* = colour; λεπτός (*leptos*) = small.]

Ichthy.: A genus of fishes, belonging to the sub-family Serraninæ, and family Percidæ. Perches. The body is usually covered with coloured spots.

chrŏn'-ĭ-cle, *cron-ĭ-cle, *cron-y-cle, *s.* [Formed as a dimin. from Mid. Eng *cronique* or *cronike*, used by Gower; from O. Fr. *cronique*, pl. *croniques* = chronicles, annals; from Low Lat. *chronica* = a catalogue; from Gr. χρονικά (*chronica*) = annals, neut. pl. of χρονικός (*chronikos*) = pertaining to time; χρόνος (*chronos*) = time. (Skeat.)]

I. *Ordinary Language*:

1. *Literally*:

(1) A register or history of events in regular order of time, a diary, annals. It differs from a history proper in that the events are set down in order of succession barely and simply without any attempt at connection, colouring, or philosophic treatment.

(2) A history; a narrative of events (generally in the plural).

2. *Fig.*: Anything which conveys or suggests the course of events in history.

"Every mouldering stone is a *chronicle*."—*Irving*

II. *Scripture Canon (Pl.)*: A name applied to two books of the Canonical Old Testament, which immediately follow 1 and 2 Kings. In the Hebrew Bible they form but a single composition, entitled דִּבְרֵי הַיָּמִים (*Dibre Hayamim*) = words of days, i.e., diaries or journals. The Septuagint translators were the first to divide the one volume into two, which they called Παραλειπομένων πρῶτον (*Paralipomenôn prôton*), and Παραλειπομένων δεύτερον (*Paralipomenôn deuteron*) = the first and the second of things left over, i.e., passed by or omitted by the writers of the books of Samuel and Kings. In the Vulgate, Wycliffe, and the earlier printed versions, they are termed 1 and 2 Paralipomenon (q.v.). Jerome called the undivided book *Carnalem*, and the Vulgate *Chronica* or *Chronicorum liber* [CHRONICON], from the former of which two appellations we derive the name Chronicles. To a certain extent the Chronicles are supplementary to the books of Samuel and Kings, but in part they also travel over the same ground, the books of Kings, however, regarding events from the prophetic standpoint, whilst the Chronicles do so from the Levitical point of view. The traditionary opinion, both among Jews and Christians, regards Ezra as having been the author or compiler of the books of Chronicles. If so, then a later hand must have added ch. iii. 19—24, where the descendants of Zerubbabel are enumerated apparently to the third generation. If, on the contrary, that passage was penned by the writer of the other parts of the book, then the composition of the volume itself must be brought down to B.C. 330, if not to 300—nay, there have been advocates for even a lower date, viz., 270 or 260. At even the earliest of these dates the Jewish commonwealth consisted chiefly of the two tribes of Judah and Benjamin, the ten tribes not having returned from captivity. In the books of Chronicles, consequently, the former kingdom of Israel holds but slight prominence, whilst that of Judah, to which the writer was passionately attached and of which to a certain extent he was the apologist, is treated at length. He shows that Judah was prosperous when it followed Jehovah, and fell into misery and decay whenever it rejected Him as its king.

The writer of the books of Chronicles seems to copy or allude to Genesis, Exodus, Numbers, Joshua, Ruth, 1 and 2 Samuel, 1 and 2 Kings, Ezra, and Nehemiah; between xi. 3—24 of the last-named of these books and 1 Chron. ix. 2—34 there is a striking parallelism.

Some of the numbers in Chronicles differ from those in Kings, possibly from errors of copyists, figures in the very nature of things being much more liable than words to undergo alteration. Where Kings and Chronicles differ in this respect, the numbers in the former books are to be preferred.

". . . the system, or many systems, of *chronology* framed out of the Egyptian monuments. . . ."—*Milman: Hist. of Jews* (3rd ed.), Prof., vol. i., p. xxix.

¶ The following are the leading systems of chronology existing among the several nations of the world. Want of space forbids that the list should be exhaustive:—

1. *Chinese and Japanese Chronology*: In these calculation is made by cycles of sixty years, each year of the cycle separately named.

2. *Hindoo Chronology*:

(1) *Historical*: No system is universal in India or exclusive. Two of the chief are the era of Salivahana (A.D. 77), and that of Vicramaditya (B.C. 57).

(2) *Astronomical*: The Hindoos have four Ages [YUGA]. We are now in the Kali Yuga, beginning about 3094 B.C.

3. *Egyptian Chronology*:

(1) *Historical*: Julius Africanus and Eusebius have preserved some fragments of a work by Manetho, an Egyptian priest, who lived in the time of Ptolemy Lagus, in the 3rd century B.C. In these fragments the successive rulers of Egypt, from the very first to nearly the time of Alexander the Great in the 4th

century-B.C., are arranged in thirty or thirty-one dynasties. Increasing importance has been given to his work, as it has been found that one after another of his statements, once unsupported, have been confirmed by the hieroglyphics of the monuments. A long period is, of course, requisite for so many dynasties. Lane, Stuart Poole, and others largely reduce this by making certain of the first seventeen dynasties contemporaneous, whilst Bunsen, Lepsius, and their followers make them successive, and contend for a lengthened chronology.

(2) *Astronomical:* The Egyptians, moreover, calculated by a tropical cycle of 1,500, and a Sothic cycle of 1,460 Julian years. [CYCLE.]

4. *Greek Chronology:* In the time of Herodotus, and subsequently in that of Thucydides, the Greeks had no chronology spanning wide intervals of time. It was not till B.C. 194 that Eratosthenes, the "father" of Greek chronology, began to count by Olympiads, the first of which was dated from what we now should call B.C. 776. He was followed by Apollodorus, B.C. 115, Censorinus A.D. 238, &c. There were other Greek methods of computation than by Olympiads; thus the era of the Seleucidæ was B.C. 324.

5. *Roman Chronology* The method of Roman reckoning was by the consulships, which, of course, could give no indication of time unless their order was carefully preserved, and even then was clumsy. A much simpler and better plan was by calculating years from the building of the city. This Varro, whom the moderns follow, placed in what would now be called B.C. 753, while Cato preferred 752. It does not materially diminish the value of this date that Rome would seem to have come into existence earlier than that year. It is enough for chronology that the date to be reckoned from is a fixed one.

6. *Jewish Chronology:* Up till the 15th century the Jews followed the era of the Seleucidæ (4). Since then they have dated from the creation of the world, which they fix 3760 years and three months before the commencement of the Christian era.

7. *Muhammadan Chronology:* Dates are counted from the Hegira, *i.e.*, the time of Muhammad's flight from Mecca to Medina, 16th or 15th July, A.D. 622.

8. *Christian Chronology:* Since the 6th century dates have begun to be reckoned from the birth of our Lord [CHRISTIAN ERA], though the system did not become universal in Europe till many centuries subsequently. The chief disadvantage of this method is that it requires a counting backward as well as forward; its advantage is that it evades dating the creation of man and of the earth, though, of course, investigations have been made as to how many years B.C. these events, formerly believed to have occurred almost at the same time, took place. Hales brought together 120 opinions on the subject, the extremes varying by 3,286 years, whilst it has been affirmed that even 300 diverse views on the subject exist. One great reason of the discrepancy is that the Hebrew, the Samaritan, and the Greek Pentateuchs all differ as to certain numbers in Genesis v. and elsewhere, so that Archbishop Usher, following the Hebrew, makes the creation B.C. 4004, while Hales, preferring the Septuagint Greek, fixes the date at 5,411.

9. *Scientific Chronology:* Wherever the occurrence of an eclipse of the sun or moon has been noted by an ancient or other historian in the annals of any year, which he accurately notes, astronomy will ultimately fix that eclipse with unerring exactitude to the day, hour, minute, and second. The only uncertainty at present is that the value of certain tables, called Hansen's, by which the moon's motion is computed, has excited differences of opinion. Geology has proved finally and irreversibly that the world was in existence many millions of years before man came upon the scene, and that the two events must not be confounded by chronologists. Occurrences marking the several stages in the earth's past history, it has hitherto dated by geological periods, or subdivisions of them, not by historic time. It is only now beginning cautiously to feel its way to date in years a few events of the Post-Pliocene, or at furthest, of the Newer Pliocene periods. [GLACIAL PERIOD.] The first appearance of man (a very recent geological event) it carries back further than history has as yet ventured to do. [ANTIQUITY OF MAN, PALÆOLITHIC, &c.]

chron-om'-e-tər, *s.* [Fr. *chronomètre*, from Gr. χρόνος (*chronos*) = time, and μέτρον (*metron*) = a measure.]

1. *Horol.:* An instrument for the exact measurement of time. This general meaning would include clocks, watches of all kinds, clepsydræ, and some other devices, such as hour-glasses and the graduated candles of the famous King Alfred. The term is, however, applied in a restricted sense to those having adjustments and compensations for the fluctuations of temperature. Chronometers are known as ship's and pocket. The rating of chronometers is usually conducted at government observatories. The instruments are sent from the different watchmakers and received at stated periods. They remain the greater part of a year, their rates being noted daily by two persons. The best receive prizes and are purchased for the navy; others receive certificates of excellence; others are unrewarded. On their arrival in January, they are left to the ordinary atmospheric temperature for some months; their rates are taken under these conditions. The apartment is then heated to a tropical temperature, and the rate taken. They are then placed for a certain period in trays over the stove, and the rate taken. They are then placed in a refrigerating chamber cooled by a freezing mixture, and the rate taken under this artificial arctic temperature. Their capacity to stand these variations constitutes their value, and their actual range of exposure may be estimated at 180°—from the + 120° of Aden and Fernando Po to the − 60° of the Arctic regions when frozen in the pack of ice and watching through the long, long night. (*Knight.*)

2. *Music:* An instrument to indicate musical time; a metronome.

"An instrument under the . . . name *chronometer* is also used by musicians for the accurate measurement of time. Two sorts have been invented for different purposes. The first supplies the motion of the conductor, and regularly beats time. . . . The second is used by tuners of instruments to measure the velocity of beats."—*Encyclopædia Metropolitana.*

chronometer-escapement, *s.* An escapement invented by Berthoud, and improved by Harrison, Arnold, Earnshaw, and Dent. It is the most perfect, delicate, and satisfactory in its operation, of all the escapements. It is also kept more carefully, at least in marine chronometers, as the gimbal-joint hanging enables it to maintain a constant position relatively to the horizon, and it is carefully guarded from jars.

chron-o-mĕt'-ric, chron-o-mĕt'-ri-cal, *a.* [Fr. *chronométrique.*] Pertaining to a measurer or the measurement of time; pertaining to, or measured by, a chronometer.

". . . to carry a chain of *chronometrical* measurements round the World."—*Darwin: Voyage Round the World* (ed. 1870), ch. i. 1.

chronometric-governor, *s.* A device by which a time-measurer set to work at a prescribed and equable rate is made to regulate the motion of an engine. Invented by Wood, and improved by Siemen.

chron-om'-ĕ-try, *s.* [Fr. *chronométrie.*] The art or science of the division and measurement of time. (*Maunder.*)

chron'-o-scope, *s.* [Gr. χρόνος (*chronos*) = time; σκοπέω (*skopeō*) = to see, to examine.]

1. An instrument invented by Prof. Wheatstone in 1840, to ascertain the velocity of projectiles by measuring small intervals of time. Two wire targets are placed, one about twenty yards from the gun, and the second about the same distance farther on. These are connected by a fine insulated wire with the instrument, which is about 400 yards in the rear of the ordnance. The instrument is adjusted on a plan similar to an electro-ballistic machine. When the shot is fired it cuts the wire in the first target, and then in like manner cuts the wire in the second target, the instant each wire is severed being recorded by the instrument. The interval of time occupied by the ball in passing from one target to the other furnishes the data for obtaining the initial velocity of the shot.

2. An instrument to measure the duration of luminous impressions upon the retina. (*Webster.*)

3. A metronome. (*Craig.*)

chrō-ō-chlo-ā'-gē-æ, *s. pl.* [Gr. χρώς (*chrōs*) = colour, complexion, skin; χλόη (*chlōē*) = grass, young corn; Lat. fem. pl. adj. suff. *-ăgĕæ.*]

Bot.: An order of inferior cryptogamous unicellular plants, from salt and fresh water.

chrō-ō-līch'-ĕn-ĭdæ, *s. pl.* [From Mod. Lat. *chroolich(en)*, the type; and Lat. fem. pl. adj. suff. *-idæ.*]

Bot.: A family of Fungi or Algæ, of which Chroolepus is the type.

chrō-ō-lĭp'-ĭd, *a.* [From Gr. χρώς (*chrōs*) = colour; λέπις (*lepis*) = a scale, allied to λέπος = form, appearance.]

Bot.: Made up of small yellow scales. (*Brown*, 1874.)

chrō-ō-lĭp'-ĭs, *s.* [Gr. χρώς (*chrōs*) = colour, and λέπις (*lepis*) = a rind, husk, shell.]

Bot.: A generic name applied to certain byssoid structures found on rocks, bark of trees, &c. *Chroolepus aureum* is composed of rigid opaque, ultimately brittle filaments forming soft cushions of a yellowish colour. *C. Jolithus, odoratum, Hæmatodes* are of orange or fulvous colour. Another series of species, *C. ebreum*, &c., are black. These plants have been regarded sometimes as Fungi and sometimes as Algæ. Rabenhorst describes eleven species. The genus forms the type of the family Chroolepidæ. Reproduction by biciliated zoospores. (*Griffith & Henfrey.*)

chrȳs'-ă-lĭd (pl. **chrȳs-ăl'-ĭ-dēs**), *s.* & *a.* [Fr. *chrysalide*; Lat. *chrysallis*; Gr. χρυσαλλίς (*chrysallis*) = the gold-coloured sheath of a larva, butterflies, a chrysalis, from χρυσός (*chrusos*) = gold.]

A. *As subst.:* [CHRYSALIS].

B. *As adj.:* Pertaining to or resembling a chrysalis.

chrȳs-al-ĭ-dī'-na, *s.* [Eng. *chrysalid*; and Lat. neut. pl. adj. suff. *-ina.*]

Zool.: A Textularian Foraminifer, with a triserial arrangement of chambers and with large pores, and sometimes tubes, opening from chamber to chamber. *Chrysalidina gradata* is from the Cretaceous strata of France. A dimorphous form, which is uniserial in its old state, lives in the Indian Ocean and Panama Bay. (*Griffith & Henfrey.*)

chrȳs'-ă-lĭs (pl. **chrȳs-ăl'-ĭ-dēs**), *s.* [CHRYSALID.]

1. *Nat. Hist.:* The last stage through which most insects pass before reaching their winged

CHRYSALIDES.

or perfect state. In this stage the insect is externally quiescent, but in the subject of internal changes, the chief among which are the development of wings and sexual organs. The case of the chrysalis varies greatly in the different orders. [COCOON.]

2. *Fig.:* Applied to the state of man while in this world: the soul enclosed in the body being compared to the perfect insect enclosed in its case.

"This dull *chrysalis*
Cracks into shining wings, and flies its way."
Tennyson: St Simeon Stylites.

chrȳs-ăm'-ĭne, *a.* [Gr. χρυσός (*chrusos*) = gold; Eng. *am-* contr. for *ammonia*; and suff. *-ic.*]

¶ These various chemical terms compounded with *chrys-* owe their derivation

from Gr. χρυσός (*chrusos*) = gold, to the fact of their golden or rich yellow colour.

chrysamic acid, *s.*

Chem.: Tetranitro-chrysazin, or tetranitro-dioxy-anthraquinone, $C_{14}H_2(NO_2)_4(OH)_2O_2$. An acid obtained by heating aloes with strong nitric acid. It crystallises in golden-yellow needles. It is slightly soluble in water, and has a bitter taste; its potassium salt resembles murexide. It is converted by chloride of lime into chloro-picrin. With ammonia it forms chrysammate of ammonia, consisting of black adamantine crystals, and with potash, a beautiful carmine-red powder called chrysammate of potash.

chrys-am-ide, *s.* [Gr. χρυσός (*chrusos*) = gold, and Eng. *amide* (q.v.).]

Chem.: The same as tetra-amido-chrysazin, $C_{14}H_2(NH_2)_4(OH)_2O_2$. It is obtained by the action of reducing agents on chrysamic acid. Chrysamide forms indigo-blue needle crystals having a metallic copper lustre.

chrys-am-mate, *s.* [Gr. χρυσός (*chrusos*) = gold; *amm-*, contr. for *ammonia*; and suff. *-ate* (*Chem.*).]

Chem.: A salt of chrysamic acid.

Chrysammate of ammonia (*Chem.*): [Chrysamic acid].

Chrysammate of potash (*Chem.*): [Chrysamic acid].

chrys-an-isic, *a.* [Gr. χρυσός (*chrusos*) = gold, and Eng. *anisic* (q.v.).]

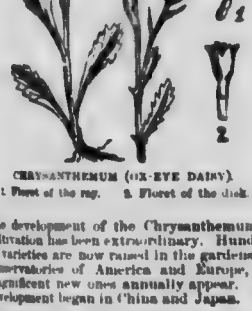
Chem.: Of golden hue, and having anisic acid in its composition.

chrysanisic acid, *s.*

Chem.: Dinitro-paramidobenzoic acid, $C_6H_2(NO_2)_2(NH_2)CO{\cdot}OH$. It is prepared by heating dinitro-anisic acid with aqueous ammonia. It crystallises in yellow needles, which melt at 250°. It is a strong monobasic acid.

chrys-an-thē-mum, *s.* [Gr. χρυσός (*chrusos*) = gold, and ἄνθεμον (*anthemon*) = a flower.]

Bot.: A genus of herbaceous or slightly shrubby plants, belonging to the corymbiferous group of the order Compositæ. The family is represented in the United States and Europe by the Ox-eye Daisy, *C. acanthemum*, and in England by the Corn Marigold, *C. Segetum*.



CHRYSANTHEMUM (OX-EYE DAISY).
1. Floret of the ray. 2. Floret of the disk.

The development of the Chrysanthemum by cultivation has been extraordinary. Hundreds of varieties are now raised in the gardens and conservatories of America and Europe, and magnificent new ones annually appear. This development began in China and Japan.

chrys-a-or, *s.* [Gr. χρυσός (*chrusos*) = gold; ἀορ (*aor*) = a sword.]

Zool.: A name given by De Montfort to a genus of Belemnites.

chrys-a-ō-ra, *s.* [Gr. χρυσός (*chrusos*) = gold; ἀορ (*aor*) = a sword.]

Zool.: A genus of Medusæ belonging to the family Pelagidæ.

chrys-a-zin, *s.* [Gr. χρυσός (*chrusos*) = gold; ἀζωτο, and suff. *-in*.]

Chem.: A chemical compound which crystallises in red needles, melting at 191°.

chrys-el-ē-phan'-tine, *a.* [Gr. χρυσός (*chrusos*) = gold, ἐλεφαντινος (*elephantinos*) = made of ivory, ἐλέφας (*elephas*) = an elephant.] Made partly of gold and partly of ivory.

"... a Doric edifice in which the celebrated chryselephantine statue of the god by Pheidias was placed about B.C. 438."—*Mr Bunbury, of British Museum: On Excavations at Olympia, in Times, Feb. 1, 1878.*

chrys-ene, *s.* [Gr. χρυσός (*chrusos*) = gold.]

$$C_6H_4{-}CH$$
$$C_6H_4{-}CH$$

Chem.: | | or $C_{18}H_{12}$ an aromatic hydrocarbon, $C_{18}H_{12}$. It is obtained along with benzene by heating diphenyl in a sealed tube with hydrogen. Also obtained in the distillation of tar, pitch, &c. Chrysene is insoluble in alcohol and ether, but crystallises from boiling oil of turpentine. It is a golden yellow colour when pure.

chrys-ō-ī'-dēs, *s.* [Gr. χρυσοειδες (*chrusoeides*) = golden.]

Chem.: An orange-coloured substance, $Si_4H_4O_{11}$. (?) It is obtained by digesting calcium silicide with strong hydrochloric acid. It is insoluble in water, alcohol, and in nearly all solvents. Exposed to sunshine it becomes lighter in colour, gives off hydrogen, and is converted into leukone, or silico-formic acid, $H\,SiO{\cdot}OH$.

chrys-id-i-dæ, chrys-i-dēs, *s.pl.* [From *chrysis*, the typical genus, and Lat. fem. pl. adj. suff. *-idæ*.]

Entom.: A family of Hymenopterous insects, distinguished by being furnished with a tubuliferous ovipositor. They are all parasitic, and coloured with the richest metallic hues.

chrys-i-mē'-ni-a, *s.* [Gr. χρυσός (*chrusos*) = gold, and μενω (*menō*) = to remain (?).]

Bot.: A genus of Laurenciaceæ (Florideous Algæ). *Chrysimenia clavellosa* is a rare sea-weed, three to twelve inches high, forming a feathery frond composed of a branched, tubular, long, not constricted or chambered, cellular structure, filled with a watery juice. The spores are angular, and are contained in dense tufts, in ceramidia borne on the sides of the branchlets. The tetraspores are tripartite and immersed in the branchlets. (*Griffith & Henfrey.*)

chrys'-in, *s.* [Gr. χρυσός (*chrusos*) = gold, and Eng. suff. *-in* (*Chem.*).]

Chem.: A substance obtained from the buds of species of *Populus* (Poplars). Chrysin when pure forms bright yellow shining plates, which melt and sublime at 275°. Ferric chloride gives a violet colour with an alcoholic solution of chrysin; it is insoluble in water. It forms a yellow solution with alkalies; on boiling this solution it is decomposed into phloroglucin, acetic and benzoic acids, and methyl-phenyl ketone.

chrys-ip'-tēr-a, *s.* [Gr. χρυσός (*chrusos*) = gold, and πτερον (*pteron*) = a wing, a fin.]

Ichthy.: A genus of oval-bodied fishes, belonging to the family Chætodontidæ. They have large pectoral fins.

chrys'-is, *s.* [Gr. χρυσός (*chrusos*) = gold.]

Entom.: The Golden Wasp, or Ruby-tail fly, a genus of Hymenoptera. They are magnificently coloured with metallic hues. They are parasitic, depositing their eggs in the nests of the solitary Mason-bees or other Hymenoptera, on the larvæ of which their larvæ live. *Chrysis ignita* has the head, thorax, and legs of a rich blue or green, and the abdomen copper coloured. It is constantly in motion. It may be seen in summer on sunny walls poking into holes in quest of the nest of other hymenopterous insects, of which its larvæ may make a prey.

chrys-ō-bac-trōn, *s.* [Gr. χρυσός (*chrusos*) = gold, and βακτρον (*baktron*) = a staff, a stick.]

Bot.: A genus of liliaceous plants from the Auckland and Campbell Islands, New Zealand. They have linear leaves, and racemose flowers (occasionally dioecious) of a bright yellow colour. *Chrysobactron Hookeri*, a pretty little bog-plant, is cultivated in greenhouses in Britain. (*Treas. of Bot.*)

chrys-ō-bāl-an-ā'-cē-æ, *s.pl.* [From Mod. Lat. *chrysobalanus(us)* = the type, and Lat. fem. pl. adj. suff. *-aceæ*.]

Bot.: An order of dicotyledons, closely allied to Rosaceæ, and containing about twelve genera. They are all trees or shrubs with alternate stipulate leaves, and several of them produce edible fruits. They are classed by Lindley in his "Rosal Alliance" between Calycanthaceæ and Fabaceæ.

chrys-ō-bā'-la-nus, *s.* [Gr. χρυσός (*chrusos*) = gold, and βαλανος (*balanos*) = an acorn, in reference to the yellow fruit of some species.]

Bot.: A genus of trees, the typical one of the order Chrysobalanaceæ, with simple leaves, and racemes or panicles of insignificant flowers. The fruit of *Ch. pauchalanus Icaco*, the cocoa-plum, is eaten in the West Indies, as is another species, *C. luteus*, in Sierra Leone.

chrys-ō-bēr-yl, *s.* [Lat. *chrysoberyllus* from Gr. χρυσός (*chrusos*) = gold, and βηρυλλος (*bērullos*) = a beryl.] A green, greenish white, or yellowish-green orthorhombic mineral, of which there are two varieties: (1) Ordinary Chrysoberyl, and (2) Alexandrite (q.v.).

chrys-ō-chlōr'-a, chrys-ō-chlōre, *s.* [Fr. *chrysochlore*, from Gr. χρυσος (*chrusos*) = gold, and χλωρος (*chlōros*) = green.]

Entom.: A genus of Dipterous insects, belonging to the family Notacanthæ. They are of a beautiful golden-green colour. The larvæ live in cow-dung.

chrys-ō-chlōr'-in, *s.* [Gr. χρυσός (*chrusos*) = gold, and χλωρος (*chlōros*) = green.]

Zool.: A genus of Talpidæ (Moles), the fur of which reflects most brilliant hues of green and gold. *Chrysochloris aurea*, or *aurea*, is the Golden Mole of Africa.

chrys'-ō-chroūs, *a.* [Gr. χρυσός (*chrusos*) = gold, and χρως (*chros*, Ep. & Ion. χροὼς (*chroos*) = the skin.]

Bot.: Having a yellow skin.

chrys-ō-cōl'-la, * **chrys-o-chelle,** *s.* [Gr. χρυσοκολλα (*chrusokolla*) = gold solder: from χρυσος (*chrusos*) = gold, and κολλα (*kolla*) = glue.]

Mineralogy:

1. A name of borax.

2. A silicate of protoxide of copper of a fine emerald-green colour, apparently produced from the decomposition of copper ores, which it usually accompanies. It derives its name from the weak resinous lustre, and the peculiar transparency of the fractured edges. (*Page.*)

"Much *Chrysocholla* and also silver fire.—*Splendor Magnificence*, 631 (*Davies.*)

chrys-ō-co-mē, *s.* [Gr. χρυσος (*chrusos*) = gold, and κομη (*komē*) = hair.]

Bot.: A genus of South African shrubs or undershrubs of the composite family, nearly allied to Linosyris, from which it differs in the hairs of its pappus being in a single series. About fifteen species are enumerated. The leaves in most cases are linear in form and entire. The yellow nearly spherical flower-heads are about the size of a pea, and single on the ends of the branches. *Chrysocoma aurea* is in cultivation, and is said to be a very common species about Cape Town. Its leaves are linear, and about half an inch long. (*Treas. of Bot.*)

chrys-ō-cō-rȳ-nē, *s.* [Gr. χρυσός (*chrusos*) = gold, and κορυνη (*korunē*) = a club.]

Bot.: A curious genus of small annual Australian plants, belonging to the composite family. They are branched from the base, and seldom exceed three inches in height. The leaves are small, linear, and covered with loose white wool; but the most marked feature in the plants is the arrangement of the flower-heads. These are disposed in short yellow club-shaped spikes, and each flower-head is almost hidden by a yellow bract and contains but two florets. Five species are known; they are chiefly found in the western and southern parts of Australia.

chrys-ō-dō'-ō-mūs, *s.* [Gr. χρυσός (*chrusos*) = gold, and δωμος (*domos*) = a house, a building.]

Zool.: A genus of Molluscs, the shells of which are large, and of a beautiful orange colour. The basal channel is comparatively short, and the body whorl ventricose. Family, Muricidæ. It is now reduced to a sub-genus of Fusus.

chrys-ō-gās'-tēr, *s.* [Gr. χρυσος (*chrusos*) = gold, and γαστηρ (*gastēr*) = a stomach.]

Entom.: A genus of Dipterous insects, belonging to the family Syrphidæ. *Chrysogaster splendens* has the head and thorax green and

the abdomen purple-black, the sides greenish, the antennæ yellow. It is half an inch long. It occurs in England.

chrys-o-gen, *s.* [*Gr. χρυσός* (*chrusos*) = gold; and *γεννάω* (*gennaō*) = to produce.]

Chem.: An orange-coloured hydrocarbon, contained in crude anthracene. It melts at 250°, and is soluble in concentrated sulphuric acid. Traces of this substance give a yellow colour to colourless aromatic hydrocarbons.

***chrys-o-graph-y**, *s.* [Gr. *χρυσογραφία* (*chrusographia*), from *χρυσός* (*chrusos*) = gold, *γράφω* (*graphō*) = a writing, *γράφω* (*graphō*) = to write.]

1. The art of writing or illuminating in letters of gold.

2. A letter or other writing executed in letters of gold.

chrys-oid-ine, *s.* [Gr. *χρυσός* (*chrusos*) = gold; *εἶδος* (*eidos*) = like, and Eng. suff. *-ine* (*Chem.*).]

Chem.: Metadiamidoazobenzene, $C_{12}H_{13}N_4$, or $C_6H_5 \cdot NNC_6H_3(NH_2)_2$. The hydrochloride is sold commercially as chrysoidine. It is an orange-yellow colouring matter. Chrysoidine is prepared by mixing a one per cent. solution of a diazobenzene salt with a ten per cent. solution of metadiamidobenzene; the resulting blood-red precipitate is dissolved in boiling water, the solution is cooled to 50°, and precipitated with ammonia, and then crystallized from alcohol of 30 per cent., then from boiling water. Chrysoidine forms golden needles, soluble in alcohol, melting at 117°. It is a base from mono-acid salts which dissolve in water forming a yellow solution, which is turned crimson by excess of acid. By the action of tin and hydrochloric acid it is resolved into aniline $C_6H_5 \cdot NH_2$ and triamidobenzene, $C_6H_3(NH_2)_3$.

chrys-o-lep-is, *a.* [Gr. *χρυσός* (*chrusos*) = gold, and *λεπίς* (*lepis*) = a scale.] Resembling golden scales.

chrysolepic acid, *s.*

Chem.: An acid obtained in beautiful golden-yellow scales from the mother liquid and washings of chrysamic acid. It has been discovered to be the same as picric acid. [CARBAZOTIC ACID.]

chrys-o-lite, *s.* [Fr. *chrysolithe*; Lat. *crysolithus*; Gr. *χρυσόλιθος* (*chrusolithos*), from *χρυσός* (*chrusos*) = gold, and *λίθος* (*lithos*) = a stone.]

Mineralogy:

1. A green-coloured orthorhombic mineral of a vitreous lustre, transparent or translucent. Hardness, 6—7; sp. gr., 3·33—3·5. Compos.: Silica, 31·63—44·67; protoxide of iron, 6·0—29·71; protoxide of manganese, 0—1·31; magnesia, 32·40—50·49. It is generally divided into two classes:—(1) *Precious*: Of a pale yellowish-green colour and transparent, so as to be fit for jewelry. This is found in the Levant. (2) *Common*. Dark yellowish-green to olive, or bottle-glass green; common in basalt and lavas, at times in large masses, having a rectangular outline. The *chrysolithus* of Pliny was probably our topaz, and his topaz our chrysolite. It frequently changes colour, becoming brownish or reddish-brown through the oxidation of the iron. Under the action of carbonated waters, the iron is carried off instead of being peroxidized, and also some of the magnesia is removed at the same time; and thus may come serpentine and picrosmine, which often retain the crystalline form of chrysolite.

2. The same as ZIRCON (q.v.).

3. The same as TOPAZ (q.v.).

4. A variety of Tourmaline, also called Brazilian Emerald or Peridot of Brazil. It is green and transparent.

5. The same as APATITE (q.v.).

Iron chrysolite:

Min.: The same as FAYALITE (q.v.).

Iron manganese chrysolite:

Min.: A mineral near Fayalite, but containing besides protoxide of iron, some protoxide of manganese and lime and a little magnesia, thus approaching hyalosiderite. Compos.: Silica, 29·16; alumina, 1·56; protoxide of iron, 55·87; protoxide of manganese, 8·47; magnesia, 2·23; lime, 2·29. It occurs in a gneissoid rock consisting partly of augite and garnet at Tunaberg in Sweden. (*Dana.*)

Titaniferous chrysolite:

Min.: A massive red tile-brown mineral from the talcose schist of Pfunders, in the Tyrol, having some resemblance to hatchettite; sp. gr., 3·25. It contains 3·5 to 5·3 of titanic acid, with 6 per cent. of protoxide of iron.

***chrys-o-l-o-gy**, *s.* [Gr. *χρυσός* (*chrusos*) = gold money, and *λόγος* (*logos*) = a discourse.] A discourse or treatise on wealth. (*Bramde.*)

chrys-o-l-o-phus, *s.* [Gr. *χρυσός* (*chrusos*) = gold, and *λόφος* (*lophos*) = a crest.]

Ornith.: The Walking Tyrants, a genus of birds belonging to the Tyrant Shrikes Family, Laniadæ. They are natives of Brazil.

chrys-o-m-e-lon, *s.* [Gr. *χρυσός* (*chrusos*) = gold, and *μέλος* (*melos*) = a piece, a slice.]

Entom.: A genus of Coleopterous insects, belonging to the family Rhynchophora.

chrys-o-mo-nas, *s.* [Gr. *χρυσός* (*chrusos*) = gold, and *μονάς* (*monas*) = a body.]

Bot.: A genus of North American composite plants, considered by the authors of the "Flora of North America" to be the same as that of the Golden Rod (Solidago). The species are perennial plants, with alternate lance-shaped entire or serrated leaves, sometimes furnished with pellucid dots; and they bear terminal corymbs of yellow flower-heads, each of which contains from six to eight florets, one to three of them being strap-shaped.

***chrys-o-mag-net**, *s.* [Gr. *χρυσός* (*chrusos*) = gold, and Eng. *magnet* (q.v.).] The load-stone. (*Addison.*)

chrys-o-mel-i-on, *s.* [Gr. *χρυσομηλίδιον* (*chrusomēlidion*) = a little golden beetle.]

Entom.: The typical genus of the family Chrysomelidæ (q.v.). Sixteen species are British.

chrys-o-mel-i-dæ, *s. pl.* [Mod. Lat. *chrysomel(a)*; and fem. pl. adj. suff. *-idæ*.]

Entom.: A family of Coleopterous insects, tribe Cyclica. They have ovate, convex bodies; tarsi four-jointed; antennæ not clavate; larvæ generally naked. They live on the leaves of plants. Thirty-eight genera are enumerated by Sharp as British. These insects are often very brilliantly coloured green, purple, blue, brown, &c., a commixture of colours being met with even in the English species.

chrys-o-phane, *s.* [Gr. *χρυσός* (*chrusos*) = gold, and *φαίνω* (*phainō*) = to appear.]

Min.: A variety of Seybertite, occurring in reddish-brown to copper-red brittle foliated masses. Sp. gr., 3·146. The British Museum Catalogue makes Chrysophane a synonym of Clintonite (q.v.)

***chrys-o-phan-ic**, *a.* [Gr. *χρυσός* (*chrusos*) = gold; *φαίνω* (*phainō*) = to appear; suff. *-ic*.] Appearing like or resembling gold in colour.

chrysophanic acid, *s.*

Chem.: Parietic acid, rhein acid. A modification of dioxymethylanthraquinone $C_{15}H_{10}O_4 = C_{14}H_5 \cdot CH_3(OH)_2O_2$. Chrysophanic acid occurs in the lichen *Parmelia parietina*, in senna leaves, and in rhubarb root, and is extracted by ether. It forms golden yellow prismatic crystals, which melt at 162°, and is reduced by zinc-dust to methyl-anthracene It dissolves in alkalies, forming a red solution.

The visible *Church* of Christ is a congregation faithful men, in the which the pure Word of the preached."—*Book of Common Prayer*, Art. xix

5. A distinct section or division of Christians organised for worship under a certain form. Thus we speak of the Roman Catholic, the Presbyterian, the Greek, the Latin Churches, &c.

6. The religious influence exercised Christians in the aggregate, ecclesiastical authority or influence, as distinguished from the civil power.

"The same criminal may be absolved by the *church* and condemned by the state, absolved or pardoned the state, yet censured by the *church*."—*Locke*

¶ 1. *Church of England:*

(1) *Hist.:* The foregoing definition is true in two senses: *first*, a general one signifying the Church regarded as continuous, which from the first triumph of Christianity to now, has been that of the English people, and *secondly*, in a more specific sense, the Protestant Church now established in England distinguished from the Church of Rome

As early as the 2nd century, Tertullian that those parts of Britain which were inaccessible to the Romans had become subject Christ. They received the gospel from and not from Rome. This Celtic Church driven from E. and S. England by the Sax-

These invaders were gradually converted by Augustin and his companions sent from Rome for the purpose, and by the early part of the 7th century, the seven kingdoms of the heptarchy were all nominally Christian. In England, as elsewhere, the centuries between the 7th and the 13th were marked by the growth and ultimate domination of the Papacy, and in 1213, King John, to the disgust of his subjects, surrendered his crown to the Roman legate. But the submission was never complete, and certain Parliamentary measures in the 14th century, designed to protect the civil power against the encroachments of the Church, look as if they had been proposed at a much later period. In the same century, Wyclif on the one hand, and Chaucer and the author of "Piers Plowman" on the other, inflicted heavy blows upon the Church's reputation. Thoroughly alarmed in the 15th century for its supremacy, it became increasingly cruel in its treatment of "heretics," and in the 16th the Reformation came. In 1531, the royal supremacy, which was intended to supersede the papal one, was imposed on the clergy by Henry VIII., and was made use of to produce other changes. In the same year Coverdale's Bible was appointed to be read in churches. In 1549, the first book of Common Prayer was published, and permission given to the clergy to marry. In the reign of Edward VI., A.D. 1547 to 1553, more sweeping measures of reform were carried out under the auspices of foreign rather than English Protestant leaders, but these were completely swept away in the great reaction in favour of Roman Catholicism which arose when Mary came to the throne. There is evidence that in 1553, when Queen Mary began to reign, the Protestants were in a minority, but in 1558, when Queen Elizabeth came to the throne, they had become a majority, the fires of Smithfield and other places having produced an effect the exact opposite of that which they had been intended to accomplish. The work of reformation was resumed under Queen Elizabeth, and in 1563 the thirty-nine articles became, as they still continue to be, the authoritative statement of the Church's creed. Two parties subsequently came into antagonism in the Church, the Puritans, who wished to constitute it on a basis like that of the churches of Geneva and of Scotland; and an Anglican party, who were reluctant to break so completely with the past. A conference, held from 16th to 18th January, 1604, at Hampton Court, between the leaders on each side, failed to effect their reconciliation, and they went their separate ways. In 1611 was published the version of the Bible which is now called the authorised one, that which maintains its place at present, notwithstanding the issue of the revised version. The disputes between the Puritans and the Anglicans continued during the remainder of the reign of Elizabeth, and during those of James I. and Charles I. During the Civil War, which commenced in 1640, it was a great object with the Parliamentary party to obtain assistance from the Scotch, who had preceded them in rebellion by three years, having risen in 1637 against an effort to force upon them a liturgy which they abhorred. An ecclesiastical, as well as a political, union was proposed by the Scotch, who were then, as now, Presbyterian; and in 1644, the Book of Common Prayer was suppressed and the directory of public worship produced by the Westminster Assembly of divines substituted in its room. A reaction against the new arrangements was not long in arising, and with the return of monarchy episcopacy was restored. In 1662, the Act of Uniformity was passed, which compelled about 2,000 clergymen, mostly Presbyterian in sentiment, to resign their livings, and laid the foundation of modern Nonconformity. The Act is still in force. The effort of James II., in violation of his coronation oath, to undo the reformation in the English Church, injured not it but himself, and the attempt has never been renewed on the part of any subsequent sovereign. The evangelistic zeal of Whitfield, Wesley, and various other clergymen, in the 18th century, awoke the Church to new life, which did not pass away even when the followers of the two great preachers just named ceased to belong to the English Church. The evangelical party, still the most numerous in the Establishment, is, in large measure, the fruit of 18th century revival effort. In the 19th, the movement has been in other directions. With 1833, just after the passing of the first Reform Bill, the first of a series of "Tracts for the Times" came forth, and ninety, in all, were issued within the next eight years. The ritualistic party, at a later date, carried on the work which the tractarians had begun. In 1860 the *Essays and Reviews*, and in 1862 a work by Bishop Colenso on the Pentateuch, gave prominence to the opposite pole of thought, being what theologians call strongly rationalistic. Church Congresses, bringing the representatives of these three parties face to face, soften their antagonisms, and fear of common danger renders them more united than they otherwise would be.

(2) *In the United States:* The first Church of England services in the American Colonies took place at Jamestown, Virginia, in 1606, the holy communion being celebrated by the Rev. Robert Hunt, under an awning suspended between the trees. The Protestant Episcopal Church continued to prevail in Virginia during the colonial period, and was also established in the Carolinas and Georgia, while in Maryland the freedom of religion proclaimed by the Roman Catholic settlers became an intolerance of Catholicism when the English Church gained the ruling power. In the Middle Colonies the Church was never established, and in New England it was bitterly opposed, but made its way to some extent in that stronghold of Puritanism, particularly in Connecticut. After the Revolution the church in America was organized under bishops consecrated in England, though for a long time its growth was very slow. Within the present century, however, the growth has been rapid, its progress becoming so marked in the larger states that the original assignment of a bishop to each state was found to be inadequate, and new dioceses were formed within the limits of the states, New York, for instance, now having seven. The church, though still low in numbers as compared with the other denominations, is in an active and promising condition. In England and Wales its adherents number more than 14,000,000.

3. *Church of Ireland, Irish Church:* A popular name sometimes given, prior to 1871, to what was not an independent denomination, but was an integral part of the United Church of England and Ireland. It constituted the Established Church of the two countries. When on 1st January, 1871, the Act of Parliament, disestablishing and disendowing the portion of the United Church which was in Ireland, took effect, those affected by the measure, rejecting the name proposed by the Government for the new organization, adopted that of the Irish Church or the Church of Ireland.

4. *Church of Scotland:*

(1) *Hist.:* The original Scottish Church seems to have been that of the Culdees, then in mediæval times the Roman Catholic Church was, to a certain extent, the national church in Scotland, not merely as having within its pale at least by profession all the people, but as maintaining its independence of its powerful southern neighbour. The church resisted the claims to supremacy over it put forth at one time by the Archbishop of York, at another by the Archbishop of Canterbury; and, in 1176, in self-defence cast itself into the arms of the Roman Pontiff. When the 16th century opened, the royal power in Scotland was weak and was jealous of, and in connect with, a very powerful nobility. When the Reformation struggle began, the Crown remained adherent to the old faith, whilst the nobility tended to adopt the new. From the war of independence, Scotland had considered it good policy to guard against any aggression on the part of England by a close alliance with France, and when the Reformation began there were actually French troops in Scotland. On these the Crown rested to resist the religious movement which had been begun, but the Protestant "Lords of the Congregation," who had taken up arms to defend their cause, applied for aid to Queen Elizabeth, who sent troops to aid them in expelling the French. By a treaty signed on the 7th July, 1560, it was stipulated that both the French and the English troops should withdraw from Scotland. On the 24th August, of the same year, the Scottish Parliament abolished the papal jurisdiction, prohibited the celebration of the mass, and rescinded all the laws made in favour of Roman Catholicism. The reformers adopted what is now called Presbyterian Church government, though certain superintendents were appointed, with the sanction of John Knox, the great Scottish reformer, whose offices after a time were swept away. (CHURCH GOVERNMENT, PRESBYTERIANISM.) The first General Assembly was held on 20th December, 1560. When the victory over the Church of Rome was complete, the alliance between the nobility and the Protestant preachers which had effected the triumph, showed symptoms of dissolving, and a large section of the former viewed with distrust, and even active hostility, what they regarded as the too democratic measures which Knox aimed at carrying out. But one inestimable boon was gained ere they parted, the universal establishment of parish schools.

The semi-republican constitution of the Church, which became more marked after the office of superintendent had been swept away, and the second book of discipline published (the latter event in 1578), created jealousy in the minds of regents and of sovereigns, and four or five generations of Stuart kings put forth long and determined efforts to transform Presbyterian into Episcopal government. The project cost the lives and liberties of far more people than the short, sharp Reformation struggle had done, and ended at last in failure. The Revolution settlement of 1690, re-established Presbyterianism, and the General Assembly, which had been interrupted for nearly forty years, began again to sit and has done so annually from that time till now. Prior to the union with England in 1707, an Act of Security was passed, designed to preserve the Scotch national church from being overthrown by southern votes.

In 1712, an Act of Parliament re-introduced patronage which had been swept away. The operation of this enactment was one main cause of three secessions: that of the Secession, preeminently so called, in 1733; the Relief in 1752; and, the greatest of all, that which created the Free Church in 1843.

(2) *Present State:* The Church of Scotland claims about half the people as at least its nominal adherents. Besides the "General Assembly," it had in 1881 sixteen synods, eighty-four presbyteries, 1,500 churches including mission-rooms, and 1,660 ministers and probationers engaged in ministerial work. It has missions in India, Africa, and elsewhere. In 1874 the Patronage Act of 1712 was repealed, and each congregation now elects its own pastor. Its chief rivals in Scotland are the Free Church and the United Presbyterians, the latter resulting from a union of the old Secession and Relief Churches.

5. *Church of Rome:* For this see ROMAN CATHOLIC CHURCH.

¶ *Church and mice:* A game of children said to be the same with the *Sow in the Kirk* (q.v.).

Church in rotundo:

Tennyson: The Spit.

church-discipline, *s.* The discipline and order appointed by the Church.

church-founder, *s.* One who founds or endows a church.

church-going, * **chirche-gong,** * **chyrchegong,** *s.* & *a.*

A. *As subst.*: The act or practice of attending Divine service in a church.

"A very *churchegoyng* yt was to the Kyng of Prussen."
—*Bek of Ilkest.*, p. 288.

* **B.** *As adjective*:

1. Calling to Divine service.

"But the sound of the *church-going* bell
These valleys and rocks never heard."
Cowper's Verses, supposed to be writt. by Alex. Selkirk.

2. Habitually attending Divine service; regular in attendance at church.

church-goer, *s.* One who attends church.

church-government, *s.* The regulation and ordering of spiritual matters, or those pertaining to the discipline and work of the Church.

¶ Four leading views are at present entertained regarding church government. The first three agree that the rudiments of a scheme of church government are laid down in the New Testament. They differ, however, as to what that scheme is, much the greater number believing it to be *episcopacy*, though one large minority are in favour of *presbyterianism*, and another in favour of *congregationalism*. (See these words.) The fourth view, which has not a large number of advocates, is that no scheme of government was laid down in the New Testament, applicable to all times and places, but that the church has the power of adapting its government to the special circumstances in which it finds itself at any particular time.

The relation in which a church stands to the state has also a practical influence on its government. [ROYAL SUPREMACY.]

* **church-grith,** * **chirchegrith,** *s.* [A.S. *cyricgrith.*] The right of sanctuary belonging to a church.

"He habte mine men *chirchegrith*."
Layamon, ii. 514.

* **church-haw,** * **chirche-hall,** * **chirch-hed,** * **chirchehil,** * **chirche-hawe,** *s.* [A.S. *cyri.* = church, and *haga* = an enclosure.] A church-yard, a cemetery.

"He was war, withouten doute
Of the fir in the *chirchehawe*."
Kruyn Sagas, 2,694.

church-history, *s.* The history of any Church, but especially of the Christian Church.

¶ Church history naturally divides itself into four periods: (1) From the advent of Christ to the time of Constantine; (2) From Constantine to Muhammad (usually spelt Mohammed or Mahomet), or by the arrangement of Mosheim and others, to Charlemagne; (3) From Muhammad, or alternatively from Charlemagne to the Reformation; (4) From the Reformation to the present time.

Period 1. (*From the advent of Jesus Christ, B.C. 4, to the Conversion to Christianity of the Emperor Constantine, A.D.* 312, *or to his establishment of that faith as the state religion, in or before A.D.* 321): This period may be naturally divided into three sub-periods, (1) The ministry of Jesus; (2) That of His apostles; and (3) That of the Christian fathers after the last of the apostles had died.

The first sub-period has been already treated of. [CHRIST.] Immediately after the ascension means were taken to fill up by election the vacancy left in the apostolic college by the apostacy and death of Judas (Acts i. 15—26). The descent of the Holy Spirit, which had been promised by Christ (John xiv. 16, 17, and xvi. 7—14, &c.), took place soon afterwards on the day of Pentecost, accompanied by the gift of tongues (Acts ii.), and then the apostles were qualified to go forth and carry into effect the Saviour's last charge to make disciples of all nations. Under the preaching of Peter and the other apostles, thousands were converted and baptised, and such a spirit of love prevailed among the converts that a Christian socialism sprang up, but ere long it produced an Ananias and Sapphira, and we hear of it no more (Acts iv. 32—37, v. 1—11).

The same jealousy which had prompted the Jewish rulers to seek the death of our Lord, led to the persecution of His followers, and Stephen, stoned to death for alleged blasphemy, was the first of the great army of Christian martyrs. A scattering of the Christians took place, which resulted in the founding of other churches, the chief of which was at Antioch in Syria, where the disciples of Jesus for the first time received the name of Christians (Acts xi. 26.) [CHRISTIAN.]

Previous to this, Peter, moved by a vision, had begun to preach to the Gentiles (Acts xi. 1—18), and not long afterwards Saul of Tarsus, once a bitter persecutor of the Christians but now a convert, was sent out as colleague to Barnabas, on a missionary journey chiefly through Asia Minor, and ultimately became the splendidly successful apostle of the Gentiles (Acts xiii. 2, &c.). No complete coalescence ever took place between the Jewish and the Gentile elements in the early church. The Jews, with a few honourable exceptions, imbued with caste pride, attempted to impose a Judaic yoke on their Gentile brethren, and not ultimately succeeding, many of them in the second century withdrew from the church catholic, and formed the two sects of the Nazarenes and the Ebionites, the former of which retained, while the latter rejected, belief in the divinity of Christ. Whilst Jerusalem stood the unconverted Jews lost no opportunity of persecuting Christianity, but their influence was to a large extent swept away by the partial destruction of Jerusalem by Titus in 70 A.D., and its total destruction after the revolt of Barchochab in the second century. Before the first of these events had taken place, persecution on the part of the heathen Romans had begun, and it continued at intervals during the whole of the first period. The Roman persecutions are generally called ten; but if only those which were universal be reckoned, they were fewer than that number, while if those which were local be taken also into account, they were more. After the last and severest of these—called Diocletian's persecution, though its real instigator was his son-in-law Galerius—a convert of high rank, Constantine, was obtained, who became emperor in A.D. 312, and in 321 or earlier established Christianity as the State religion.

Period 2. (*From the Conversion of Constantine or his establishment of Christianity as the state religion, to the rise of Muhammad*): Whilst all along there had been a general agreement as to Christian doctrine, the several tenets had not been exactly defined, but when controversy regarding any one of them arose, it was for the first time precisely stated. The question whether our Lord was equal with the Father, and truly and absolutely Divine, or whether, as Arius alleged, he was but the first of created beings, was settled by the Council of Nice in 325 in favour of the former view, and though a long struggle between the Trinitarians and the Arians took place, and though sometimes one and sometimes the other party prevailed, the church ultimately settled into belief in the Three-One God. [ARIANISM.] Other doctrines were settled by the decision of councils. (For these see COUNCIL.) The fall of the Western empire in the fifth century almost dissolved the civil power in Italy and elsewhere, but the church was equal to the crisis, and was ultimately enabled to convert the barbarous nations to the Christian faith. In those ages of political confusion and intellectual darkness, whilst as yet society was not fully reconstituted, primitive Christianity became considerably modified, and finally in 780 the worship of images was introduced into the church.

In A.D. 569 or 570 Muhammad was born, and when he sought for religious light, his mind revolted from the Arab and all other idolatry. He was opposed also to the doctrines of the Trinity, and of the Sonship of Christ, against which his religion may be considered as a reaction. [MUHAMMADANISM.] This second period may be made to end with the first preaching of Muhammad, about A.D. 611, or with the Muhammadan era—the Hegira, 15th July, 622,—preferably the former. Or it might be made to terminate with Charlemagne's donation to the Papacy, or with the separation between the Eastern and the Western Churches, for which see *Period* 3.

Period 3. (*From the rise of Muhammadanism to the Reformation under Luther, the latter event dating from A.D.* 1517): Whilst the Greeks, indulging their natural subtility, took the lead in hair-splitting definitions of doctrine, the imperial Romans were more practically engaged in building up a world-embracing ecclesiastical power in lieu of the secular one which they had lost, and from the seventh to the thirteenth century the growth of the Papacy was continuous. In 756 Pepin, having defeated Astulphus, King of the Lombards, compelled him to give to the church and the republic the exarchate of Ravenna and the Pentapolis. In 774 Charlemagne confirmed this cession and enlarged the territory given, thus laying the foundation of the Papal temporal power. [PAPACY.] In the eighth century a schism took place between the Patriarchs of Constantinople and Rome, and the separation which still exists between the Eastern and Western Churches began. During the early part of this third period the Eastern Church was sorely trampled down by the Muhammadans, and during the twelfth and thirteenth centuries the Western one came into the conflict in hope of recovering the holy sepulchre, but the Christian success was only temporary. [CRUSADES.] During the fourteenth century the Papacy was declining, during the fifteenth it was attempting to put down evidently unmerited revolt by cruel persecution, and in the sixteenth the crisis of its fate came.

Period 4. (*From the commencement of the Reformation under Luther, A.D.* 1517, *to the present time*): For details see REFORMATION, PROTESTANTISM, ROMAN CATHOLICISM, &c. Suffice it here to say that the Reformation struggle continued in one form or other during nearly the whole of the sixteenth and seventeenth centuries. During the eighteenth the churches which had been engaged in the arduous struggle slept, till rudely awakened by the French Revolution of 1789, while the nineteenth century has been mainly a reaction against the irreligion of that revolution and the cruelties of the reign of terror. The Bible and the Tract Societies, as well as the great religious missionary organisations, sprang into life while that revolution was working itself out, and have constituted this century to a certain extent an era of missions. [MISSIONS.]

church-judicatories, *s. pl.* Ecclesiastical courts; especially applied to those of the Presbyterian churches.

church-land, * **chirche-land,** * **chirieland,** *s.* Land belonging to the Church.

church-party, *s.*

1. *Sing.*: That party in the State which supports the Church and its institutions.

2. *Pl.* (*Church-parties*): Parties existing within any church to which reference at the time is being made.

¶ *High Church, Low Church*, and *Broad Church*: Three leading parties exist in the Church of England, as corresponding tendencies do in every Church of Christendom. *The High Church* party, holding the belief that no religious body is a Church unless it has episcopal government, naturally hold aloof from Nonconformists. What may be called the extreme right of this party tend strongly towards the Church of Rome, adopting its vestments and its ceremonies, embracing its doctrines, and, in some cases, even entering its pale. The *Low Church* party, the most numerous of the three, agreeing in the main

in doctrine with the Nonconformists, and regarding government as of subordinate importance, more or less fraternise with dissenters, and are defenders with them of Protestantism. A third party, the *Broad Church*, aim at comprehending various forms of belief within the Established Church. The extreme members of this party consider that a Church is not really national unless it comprehend the professors of all beliefs held in the country. As a rule, they are themselves rationalistic in sentiment. This party, the smallest at present of the three, had the powerful advocacy of Dr. Arnold, and more recently of Dean Stanley, and of late has made surprising way

church-preferment, *s.*

"The vile person shall be no more called liberal, nor the *churl* said to be bountiful."—*Isaiah* xxxii. 5.

B. *As adj.:* Churlish, rough, rude, selfish.

churl-hemp, * churle hempe, *s.*

Bot.: The female, supposed by the old writers to be the male, plant of hemp, *Cannabis sativa.* [CARL-HEMP.]

churl's cress, *s.* [From the Ger.]

Bot.: *Lepidium campestre*, or an allied species. (*Lyte.*) Order, Cruciferæ.

churl's head, *s.* [So called from its rough hairy involucres.]

Bot.: *Centaurea nigra.* Order, Compositæ.

churl's mustard, *s.*

Bot.: A plant doubtfully identified. It may be *Thlaspi arvense*, *Iberis amara*, or the Churl's cress (q.v.). (*Britten & Holland.*)

churl's treacle, *s.*

Bot.: A plant, *Allium sativum.*

*** çhûrl, * çhûrle,** *v.t.* [CHURL, *s.*] To act like a churl to, to grudge.

"You need not, says he, *churle* me in a piece of meat."—*Andrew: Manuel*, p. 82. (Davies.)

*** çhûrl-hçod, * cherl-hed, * chirle-hede,** *s.* [Mid. Eng. *cherl*, *chirle* = churl; *hed*, *hede* = hood.]

1. The state of being a churl or servant; service.

"Holi forsothe *cherlhed* to hym silf alone profiteth."—*Wycliffe: Prof. Epistle*, p. 64

2. Churlishness.

"He is . . . of curtese fair speeche, ne soy thyng in mengo of *cherlhed* in his faire speche."—*Wycliffe: Isaiah, Prol.*, p. 394.

çhûrl'-ish, * char-lyche, * char-lysche, * cher-liche, * cher-lysche, * cher-lisch, * chere-lyche, * cher-lish, *a.* [A.S. *ceorlic*, *ceorlisc.*]

*1. Of, or pertaining to, the country or farming; rustic.

"*Charlyche* or *churlyche* (*churlische*, P.). *Rusticalis.*"—*Prompt. Parv.*

2. *Of persons:*

(1) Rude, surly, boorish.

"Pul foule and *cherlysche* semede she."
Romaunt of the Rose, 377.

*(2) Miserly, selfish, niggardly.

*3. *Of things:*

(1) Rough, rude, merciless, hard.

(2) Unmanageable, unyielding.

"Where the bleak Swiss their stormy mansion tread,
And force a *churlish* soil for scanty bread."
Goldsmith: The Traveller.

(3) Vexatious, obstructive.

çhûrl'-ish-ly, *adv.* [Eng. *churlish*; *-ly.*] In a churlish manner; roughly, rudely, selfishly.

"How *churlishly* I chid Lucetta hence."
Shakesp.: Two Gentlemen of Verona, i. 2.

çhûrl'-ish-nês, *s.* [Eng. *churlish*; *-ness.*] The state or quality of being churlish; roughness, rudeness, boorishness, selfishness

"Take from them covetousness, *churlishness*, pride and impatience."—*Bp. Taylor: Holy Living (Prayers).*

*** çhûrl'-y,** *a.* [Eng. *churl*; *-y.*] Churlish, rough, rude.

"And well nigh split upon the threatning rock.
With many a boisterous brush and *churly* knock."
Quarles: Feast for Worms (1630), § 2.

*** çhûrm, * çhyrme,** *v.i.* & *t.* [CHURM, *s.*]

A. *Trans.:* To sing in a low tone, to hum; to sing.

"Let me rather, on the healthy hill
Far from the busy world, wherever me'er stood
A cottage, tenth, an' churm my Lallan lays."
Davidson: Seasons, p. 55.

B. *Intrans.*: To grumble, or emit a humming sound.

"A cockle-cloth chinks at one side of the chimney-piece, and the curate, smoking his pipe in an antique elbow-chair, *churms* at the other."—*Sir A. Wylie*, i. 310.

***çhûrme, *chirm, *chirme, *chyrme,** *s.* [A.S. *cirm*, *cyrm.*] [CHIRM.] A confused noise, a buzzing.

"He was conveyed to the tower, with the *churme* of a thousand tuants and reproaches."—*Scott.*

çhûrn, *cherne, *chirne, *chyrne, *kyrne, *scharne (*Eng.*), **kirn** (*Scotch*), *s.* [A.S. *cerne*, *cyrn*, *cerren* (*Somner*); O. Icel. *kirna*; O. Sw. *kirna*; Sw. *kärna*; Dan. *kierne.*]

1. *Ord. Lang.*: A vessel in which milk or cream is agitated or beaten in order to effect the separation of the serous parts from the rest; a vessel in which butter is made. Formerly the churn was an upright wooden vessel, in which the milk was agitated by a staff with a wooden disk at the lower end. Modern churns are generally circular, fitted with dashers inside. The milk is agitated by the revolution of the churn, or, in some cases, of the dashers.

"Her cub'ard first did me'er employ the *churn*."
Gay: Pastorals.

2. *Porcelain*: The block or chuck on the porcelain turner's lathe, on which the thrown and baked articles are turned by thin iron tools to give truth and smoothness to circular articles.

churn-dasher, *s.* The moving agent in

SECTION OF CHURN.

a churn, rotary or reciprocating, by which the milk or cream is agitated.

churn-drill, *s.* A large drill used by miners. It is several feet long, and has a chisel-point at each end.

churn-owl, *s.*

Ornith.: A local name for a bird, the Nightjar or Goatsucker, *Caprimulgus europæus*. The first element is prob. a corruption of *churr*, from the noise made by the bird.

churn-power, *s.* A motor for driving churns or churn-dashers to agitate the milk or cream.

churn-staff, * scharnestafe, *s.*

* 1. *Ord. Lang.*: The staff or implement employed in the operation of churning by hand in an upright churn.

2. *Bot.*: A plant, *Euphorbia helioscopia.*

çhûrn, *cherne, *chirne, *chyrne (*Eng.*), **kirn** (*Scotch*), *v.t.* & *i.* [A.S. *cernan* (*Somner*); O. Icel. *kirna*; Sw. *kärna, tiärna*; Dan. *kierne*; Dut. *kernen*; Ger. *kernen.*]

A. *Transitive*:

† 1. *Generally*:

(1) To agitate or shake violently; to champ, to chaw.

(2) To mix or work up together.

2. *Spec.*: To agitate milk or cream in a churn for the purpose of making butter.

B. *Intrans.*: To perform the operation of churning.

çhûrned, *pa. par.* & *a.* [CHURN.]

çhûrn'-ing, *pr. par., a., & s.* [CHURN, *v.*]

A. & **B.** *As pr. par. & particip. adj.*: (See the verb)

C. *As substantive*:

1. The act or process of agitating or beating milk or cream in a churn for the purpose of making butter.

"The *churning* of milk bringeth forth butter."—*Prov.* xxx. 33.

2. The quantity of butter made at one operation.

*** çhûrr, * churl, * chirle,** *v.i.* [CHIRRE.] To coo, to murmur.

"The *churtle* moor-cock woos his valentine,
Couring coylah to his cubella treat."
Davidson: Seasons, p. 8.

chär'-rŭs, *s.* [Hindust. *chârâs.*]

Comm.: The resinous exudation of the leaves and flowers of Indian Hemp, *Cannabis indica* (q.v.). It is used by the natives of India as an intoxicating drug. According to Jaffur Shurreef, a man covers himself with a blanket and runs through a field of hemp early in the morning; the dew and gum of the plant naturally adhering to it are scraped off and the blanket afterwards washed and wrung. Both products are boiled together and an electuary formed. The smoking of five grains of it will produce intoxication.

*** çhûrr'-wŏrm,** *s.* [A.S. *cerran* = to turn; and Eng. *worm.* (*Bailey.*)]

Entom.: An insect that turns about nimbly; called also a fan-cricket; the mole-cricket (*Gryllotalpa vulgaris*). (As this insect is also called the "croaker," Bailey's etymology seems doubtful; cf. churn-owl.)

*** çhûşe,** *v.t.* & *i.* [CHOOSE.]

çhŭş'-ite, *s.* [Cf. Gr. χοῦς (*chous*), contr. of χόος (*choos*) = earth heaped up . . . alluvial earth, with suff. *-ite* (*Min.*) (q.v.).]

Min.: A variety of Olivine. Dana considers that it has been derived from chrysolite, the common variety of what he makes the same as Olivine. Chusite is from Limburg, in Brisgau. (*Dana, &c.*)

chûte, *s.* [Fr. *chute* = a fall. The meaning of the def. appears to be confused with Eng. shoot (q.v.).]

Mech.: An inclined trough. On a moderate scale it forms a leader, or feeder, to machines. On a large scale it leads water from a penstock to a water-wheel, or an inclined plane down which logs are passed from a higher to a lower level. These are sometimes used in mountainous countries for land transport, and sometimes are the links of a slack-water system, as on the Ottawa; called slides.

çhŭt'-nēe, çhŭt'-nēy, *s.* [Mahratta, &c. *chutnee, chutni.*]

Cookery: An acid and highly pungent seasoning, an Indian condiment generally composed partly of sweet fruits, as mangoes and raisins, with acids, such as lemon-juice and sour herbs, to which are added also spices and cayenne pepper.

chȳd'-ŏr-ĭa, *s.* [Etym. unknown.]

Zool.: A genus of Entomostraca, of the order Cladocera, and family Lynceidæ. They are nearly spherical; beak very long and sharp, curved downwards and forwards; inferior antennæ very short. (*Grif. & Henfrey.*) *Chydorus sphæricus* and *C. globosus* are British, the former common.

chȳ-lā'-çeŏŭs, *a.* [Eng. *chyl(e)*; *-ceous.*] Pertaining to, or consisting of, chyle (q.v.).

"When the spirits of the chyle have half fermented the *chylaceous* mass, it has the state of drink not ripened by fermentation."—*Floyer: On the Humours.*

chȳ-lā'-quē-ŭs, *a.* [Eng. *chyl(e)*, and *aqueous.*] Consisting of, or containing, chyle much diluted with water: said of a liquid which forms the circulating fluid of some inferior animals. (*Carpenter & Webster.*)

chylaqueous canals, *s. pl.*

Zool.: A canal system designed for the reception of the Chylaqueous fluid (q.v.).

chylaqueous fluid, *s.*

Zool.: A fluid consisting, as its name imports, partly of water and partly of chyle. The former derived from the exterior, and the latter a product of digestion. It is found in the body cavity of many invertebrated animals, such as Annelids, Echinoderms, and Rotifers. (*Nicholson.*)

*** çhyld,** *s.* & *v.* [CHILD.]

*** çhyld'-ing,** *pr. par.* & *a.* [CHILDING.]

chȳle, * chȳ'-lus, *s.* [Fr. *chyle*; Mod. Lat. *chylus*; Gr. χυλός (*chulos*) = juice, from (*cheō*) = to pour out.]

Anat.: The fluid of the lacteal vessels, lymph, coloured by a finely granular matter, named by Mr. Gulliver the molecular base. From the presence of fibrine in a fluid form, as in the blood, chyle coagulates into a jelly shortly after being withdrawn from its appropriate vessels. There are in chyle, as in lymph, many small globular bodies called corpuscles. Chyle also has in it more albumen than lymph possesses. It is very rich in alkalies combined partly with albumin, partly with lactic and sclacic acids; the chlorides of sodium and potassium occur in large quantity. It differs from blood by the want of red particles, as also by possessing a smaller proportion of albumen and fibrine. (*Todd & Bowman: Phys. Anatomy*, vol. ii. (1856), pp. 20-22.)

"*Chyme* in the stomach . . .—*Bacon Nat. Hist.* cent. ix. § 897. (*French.*)

chȳ'-lĭ-fĭ-ca'-tion, *s.* [Eng. *chyle*; Lat. *chylus*, and Eng. *faction*, Lat. *factio* = to make.]

Physiol.: The act or process of the formation of chyle in animal bodies from food.

"Drinking excessively during the time of *chylification*, stops perspiration."—*Arbuthnot: On Aliments.*

chȳ-lĭ-fĭc'-tive, *a.* [Eng. *chyle*, and *faction* (q.v.).] Having the power or property of forming chyle; chylifactory.

"Whether this be not effected by some way of corrosion, rather than any proper digestion, *chylifactive* imitation, or alimental conversion."—*Browne: Vulgar Errours.*

chȳ-lĭ-fĭc'-tŏr-ў, * chi-lĭ-fic'-tor-y, *a.* [Eng. *chyle*; Lat. *factio* = to make; Eng. adj. *-ory.*] The same as CHYLIFACTIVE (q.v.)

"We should rather rely upon a *chylifactory* mesentrium, or digestive preparation drawn from some or individuals, whose stomachs peculiarly dissolve lapideous bodies."—*Sir T. Browne: Vulgar Errours.*

chȳ-lĭf'-ĕr-ŏŭs, *a.* [Mod. Fr. *chylifère*; Lat. *chylus*; Gr. χυλός (*chulos*), and Lat. *fero* = to bear, to produce.] Forming or producing chyle; changing into chyle; chylific.

"Pumps clear and empty the lower part of the cup *Riferous* tubes."—*Cheyne: Essay on Regimen*, p. 6.

chylĭferous vessels, *s. pl.* Vessels bearing chyle, that is, constructed to afford passage of chyle.

"The *chylĭferous* vessels probably have the same office for the intestinal tissues as the lymphatics in other parts."—*Todd & Bowman: Phys. Anat.* vol. ii. (1856), p. 200.

chȳ-lĭf'-ĭc, *a.* [Eng. *chyle*; Lat. *chylus*, and *facio* = to make.] Chylifactive. The term is applied to one of the stomachs when a plurality of them exist, as, for instance, in insects.

chȳ-lĭf-ĭ-cā'-tion, * chi-lĭf-ĭ-cā'-tion, *s.* [Eng. *chyle*; Lat. *chylus* = chyle, and *facio* = to make.] Chylifaction; the act or process of making chyle.

"Nor will we affirm that iron is indigested in the stomach of the ostrich, but we suspect it is effected or proceed from any liquid reducts it, or tendency to *chylification*, by the power of natural heat."—*Browne: Vulgar Errours.*

chȳ-lĭf-ĭ-cā'-tŏr-ў, chi-lĭ-fic'-tor-y, *a.* [Eng. *chyle*; Lat. *chylus*, and *facio* = to make.] Chylifactive, chylific. (*Walker.*)

chȳ-lĭz'-ē, *s.* [Gr. χυλίζω (*chulizō*) = to extract or form into juice, χυλος (*chulos*) = juice.]

Entom.: A genus of Dipterous insects, belonging to the tribe Muscidæ.

*** chȳlle,** *s.* [Etym. doubtful.] An unidentified plant.

"*Chylle*, herba. *Cittum vel psillium.*"—*Prompt. Parv.*

chȳl-ō-clā-dĭ-ē, *s.* [Lat. *chylus* = chyle, Gr. κλάδος (*khados*) = a young branch, shoot.]

Bot.: A genus of Laurencieæ (Florideæ Algæ), containing a few British species, with fronds of small size, composed of branched, cylindrical, and tubular structure, cut off into chambers within by diaphragms at intervals, and filled with a watery juice.

chȳl-ō-pō-ĕt'-ĭc, chȳl-ō-pŏi-ĕt'-ĭc, *a.* [Gr. χυλοποιέω (*chulopoieō*) = to make into juice; from χυλός (*chulos*) = juice, chyle, and ποιέω (*poieō*) = to make.]

Physiol.: Having the power or the office of forming chyle.

". . . between the kidneys and the *chylopoetic* viscera. . . ."—*Owen: Anatomy* . . . iv. 1. 1. 1.

chȳ'-ous, *a.* [Fr. *chyleux.*] Consisting of, or of the nature of, chyle.

"... during a residence of ten years in Barbadoes he saw at least a dozen well-marked examples of chylous urine in negroes."—*Watson Lectures on the Principles and Practice of Physic*, lect. viii.

***chȳ'-lin,** *s.* [CHYLE.]

***chȳm-ble,** *s.* [CHIBLE.]

chȳme, *s.* [Fr. *chyme*; Lat. *chymus*; Gr. χυμός (*chumos*) = juice, from χέω (*chéō*) = to pour out.]

Physiol.: A semifluid or pulpy matter into which food is converted after it has been for some time in the stomach and mixed with gastric secretions. It passes into the duodenum from the stomach, and yields chyle by admixture with the biliary secretion.

chyme-mass, *s.*

Zool.: The central semifluid sarcode in the interior of an infusorian; the endoplasm.

***chȳme,** *v.t.* [CHYME, *s.*] To extract by chemical processes. (*Lit. & fig.*)

"What antidote against the terror of conscience can be stirred from gold."—*Adams Works*, i. 155. (*Davies.*)

chȳm'-ic, *a.* & *s.* [CHEMIC.]

chȳm-if'-i-cā'-tion, *s.* [Fr. *chymification*; Lat. *chymus*, and *facio* = to make.] The act or process of forming into chyme.

"The transformation of food into tissue involves mastication, deglutition, *chymification*."—*Herbert Spencer: Data of Biology*, § 25.

chȳm'-i-fied, *pa. par.* or *a.* [CHYMIFY.]

chȳm'-i-fȳ, *v.t.* [Fr. *chymifier*; Lat. *chymus*, and *facio* (pass. *fio*) = to make.] To form into chyme. (*Quar. Rev.*)

chȳm'-ist, *s.* [CHEMIST.]

"Operations of *chymistry* fall short of vital force: no *chymist* can make milk or blood of grass."—*Arbuthnot: On Aliments.*

chȳm'-is-trȳ, *s.* [CHEMISTRY.]

"Sometimes she flies like an industrious bee,
And robs the flowers by Nature's *chymistry*."
Dryden: Art of Poetry, Ode v. 2.

chȳm-ō-car'-pus, *s.* [Gr. χυμός (*chumos*) = juice, and καρπός (*karpos*) = fruit.]

Bot.: A genus of scandent herbs belonging to the Tropæolaceæ. The scarce three-lobed, three-celled ovary grows into a three-lobed, sweet, fleshy, edible berry, which remains attached to the front of the persistent calyx. The black juice berry, which is not unlike, in appearance and flavour, to the Zante or currant grape, is the most remarkable peculiarity of the genus, which was founded on *Chymocarpus pentaphyllus*. (*Treas. of Bot.*)

chȳm'-ous, *a.* [Eng. *chym(e)*; suff. *-ous.*] Pertaining to, or of the nature of, chyme.

***chya-cheene,** *s.* [CHINCONE.]

***chynch-yn,** *v.t.* [CHINCH, *a.*] To be niggardly or miserly.

"*Chynchyn* or sparyn makyly (*chinchinge* or to make sparyn, *Mr.*). *Parcens.*"—*Prompt. Parv.*

***chynd,** *pa. par.* [CHINE, *v.*]

***chyn-yng,** *pr. par.* & *s.* [CHINING.]

chȳ'-lo-tȳr, *s.* An instrument for measuring the volume of a liquid by means of a graduated piston moving in that liquid.

chȳ-trid'-i-um, *s.* [Gr. χυτρίδιον (*chutridion*), dimin. of χύτρα (*chutra*) = a pot, a pitcher.]

Bot.: A genus of Unicellular Algæ, consisting of minute, globose, or pyriform, usually colourless cells, operculate at the summit, with a root-like base, attached to Confervoid or allied plants, and penetrating their cell-walls. Zoospores very numerous, globular, with a single very long cilium. (*Griff. & Henfrey.*)

¶ For other words in **chy-** not found here see under *chi-*.

ci-bar'-i-ous, *a.* [Lat. *cibarius* = pertaining to food; *cibus* = food.] Pertaining to or useful for food, edible.

***ci-ba'-tion,** *s.* [Fr. *cibation*, from Lat. *cibus* = food.]

Phys.: A term for the taking of food, also an alchemical term of various signification having reference to that act.

çib'-bōle, çib'-il, ***çib-ule,** *s.* [Fr. *ciboule*; Sp. *cebolla*, from Low Lat. *cepula*, *cepula*, dimin. of *cepa*, *cepe* = an onion.] A small variety of onion, *Allium Ascalonicum*.

"*Cibolas*, or scallions, are a kind of degenerate onions."—*Mortimer*

çi-bō'-ri-ŭm, *s.* [Lat. *ciborium*; Gr. κιβώριον (*kibórion*) = a drinking-cup made of the seed-vessel of the Egyptian bean. In Low Lat. also an arched chamber supported by four columns. In Ital. *ciborio*; Fr. *ciborre*; Sp. *cimborio*.]

1. *Arch.*: An insulated erection open on each side, with arches, and having a dome of ogee form, like the bowl of a reversed cup, carried or supported by four columns, the whole covering the altar. It is now called a *baldacchino* (q.v.). The earliest known instance of a ciborium appears to have been one in the church of St. George at Thessalonica, supposed to have been in use about A.D. 325. (*Gwilt.*)

2. *Eccles.*: The vessel in which the small hosts are consecrated at mass. From this vessel they are administered to communicants, and in it those remaining are preserved in the tabernacle.

3. *Conch.*: The glossy impression on the inside of valves, to which the muscles of the animals have been attached.

çi-bō'-ti-ŭm, *s.* [Gr. κιβώτιον (*kibótion*) = a little chest, from the form of the indusium.]

Botany:

1. A genus of Polypodiaceous ferns. [AGNUS SCYTHICUS, BAROMETZ.]

2. A noble tree-fern from New Holland. (*McNicoll.*)

***ci-bur,** ***chy-bur,** *s.* [Arab.]

Chem.: An old term for sulphur.

çi-cā'-da, *s.* [Lat. *cicada*; Fr. *cigale*; Ital. *cigala*.] [CICALA.]

Entom.: A genus of Homopterous insects, tribe Cicadariæ, sub-tribe Stridulantia, or it may be made a family Cicadidæ. They have three *ocelli* or simple eyes, with the short antennæ in front. The tarsi are three-jointed. The male has a drum or musical apparatus placed in a cavity on each side of the abdomen, and concealed by scale-like plates. A muscle pulls the drum in and again lets it out with the effect of producing a sharp continuous sound. These insects are familiar in the south of Europe, in India, in Bermuda, the West Indies, the warmer parts of America, &c. The Greeks, who considered the cicadas happy in having "voiceless wives," called the animal τέττιξ (*tettix*). The observation that the female cicadas do not emit the sharp continuous sound described is accurate. The Grasshopper and Cicada, though popularly believed the same, are not even of the same order. The former belongs to the Orthoptera, the latter to the Homoptera. The former possesses mandibles, while the latter has a suctorial apparatus instead. The antennæ of the former are very long, and those of the latter very short. The former emits its "voice" by night, the latter in the brightest sunshine. Many other differences between the two exist. *Cicada hæmatodes*, like the rest of the genus a large insect, occurs in the New Forest, in Hampshire. An American species of Cicada, *C. Septendecim*, appears only once in seventeen years, hence it is popularly known as the seventeen-year locust. It is no more akin to the locust than to the grasshopper.

çic-ə-dăr'-i-ə, çic-ə-dăr'-i-æ, * *pl.* [From Lat. *cicada*, and the neut. or the fem. pl. of Lat. suff. *-arius*.]

Entom.: A tribe of the sub-order Homoptera. The tarsi are three-jointed, the antennæ minute, and usually terminated by a bristle, and the wings with many nervures or cells. It contains the families Cercopidæ or Cicadellina, Membracidæ or Membracina, Fulgoridæ, and Cicadidæ (q.v.).

çic-a-dăl'-ə, çi-cə dăl'-i-æ, *s. pl.* [A dimin. formation from Lat. *cicada* = a grasshopper.]

Entom.: A family of Homopterous insects, better called Cercopidæ (q.v.) The name was given because they resemble typical Cicadas, but are much smaller

çi-cād'-i-dæ, *s. pl.* [From Lat. *cicada* (q.v.), and fem. pl. adj. suff. *-idæ*.]

Entom.: The family of insects of which the cicada is the type. The species, which are large insects with broad heads and breasts, are from the warmer parts of the world. Swainson made the family comprehensive enough to include the frog-hoppers as well as the cicadas proper, but the former are now made a separate family, Cercopidæ (q.v.).

çi-cā'-la, *s.* [Ital. *cigala*.] [CICADA.] Either a cicada or a grasshopper.

"At eve a dry *cicala* sung."
Tennyson: Morte d'Arthur, in the South.

çic-ə-trīçe, *s.* [CICATRIX.]

çi-cā'-ric-le, çi-cā'-ri-cŭle, * **çic-ə-trīc'-ŭ-la,** *s.* [Fr. *cicatricule*, from Lat. *cicatricula*, dimin. of *cicatrix* = a scar.]

1. *Biol.*: The germinating or foetal point in the embryo of a seed, or the yolk of an egg.

2. *Botany*:

(1) The scar of a fallen leaf.

(2) The hilum (q.v.).

çi-cā'-ri-cāte, *a.* [From Lat. *cicatrix* (genit. *cicatricis*) (q.v.), and Eng. suff. *-ose*.]

Bot.: Marked with scars, cicatrisate.

***çic'-ə-trine,** *a.* [Lat. *cicatr(ix)*, and Eng. suff. *-ine*.] Scarring, wounding.

"Thy aloe *cicatrine* tongue."—*Dekker: Satiromastix.*

çi-cā'-ri-cāte, *a.* [From Lat. *cicatrix* (genit. *cicatricis*) (q.v.), and Eng. suff. *-ate*.]

Bot.: The same as CICATRICOSE (q.v.).

çic-ə-trī'-cīve, *a.* [Lat. *cicatrix* (genit. *cicatricis*) = a scar.] Proper or useful to induce a cicatrix.

çic'-ə-trix, çic'-ə-trīçe (pl. **çic'-ə-trīç-ēs**), *s.* [Lat. *cicatrix* (genit. *cicatricis*) = a scar.]

1. *Ord. Lang. & Med.*:

(1) A scar or mark remaining after a wound.

*(2) Any mark or impression resembling the scar of a wound.

"Lean out upon a rush,
The *cicatrice* and capable impressure
Thy palm some moments keeps."
Shakesp.: *As You Like It*, III. 5.

2. *Bot.*: A scar formed by the separation of one part from another.

çic-ə-trīz'-ənt, *a.* & *s.* [Fr. *cicatrisant*, pr. par. of *cicatriser* = to scar; Lat. *cicatrix* = a scar.]

A. *As adj.*: Healing or tending to heal a wound, or to induce a cicatrix.

B. *As substantive*:

Med.: Any medicine or preparation proper or useful to induce a cicatrix, or heal a wound.

***çic-ə-trix-ā'-tion,** *s.* [Eng. *cicatrix*, and suff. *-ation*.]

1. The act or process of inducing a cicatrix, or healing a wound.

"A vein bursted, or corroded, in the lungs, is looked upon to be for the most part incurable, because of the motion and coughing of the lungs tearing the gap wider, and hindering the conglutination and *cicatrization* of the vein."—*Harvey.*

2. The state of being cicatrised.

"The first stage of healing, or the discharge of matter, is called digestion; the second, or the filling up with flesh, incarnation; and the last, or skinning over, *cicatrization*."—*Sharpe: Surgery.*

çic'-ə-trīse, *v.t.* & *i.* [Fr. *cicatriser*, from Lat. *cicatrix* = a scar.]

I. *Transitive*:

1. To apply or administer medicines or preparations calculated to induce a cicatrix.

2. To heal or induce the skin over a wound.

"We incarned, and in a few days *cicatrised* it with a smooth cicatrix."—*Wiseman On Tumours*

II. *Intrans.*: To become healed or cicatrized, to become covered with skin.

çic'-ə-trized, *pa. par.* or *a.* [CICATRIZE.]

çic'-ə-trīz-ing, *pr. par.*, *a.*, & *s.* [CICATRIZE.]

A. & **B.** *As pr. par. & particip. adj.*: (See the verb).

C. *As subst.*: The act or process of healing a wound by inducing a cicatrix; the state of becoming cicatrized.

"... the *cicatrising* of these being for the most part the work of the surgeon."—*Wiseman.*

çi-ca'-tri-çose, *a.* [Lat. *cicatricosus*, from *cicatrix* = a scar.] Full of scars or cicatrised wounds; scarry. (*Craig.*)

çi'-çe, *s.* [A name of unknown meaning (*Loudon*); said to be a man's name (*Paxton*); but may it not be from Gr. *σίκι* (*kiki*) = the castor-oil berry, to which the cicca is akin?]

1. *Bot.*: A genus of Euphorbiaceæ, species of which have three to five cells, while three is in most of the order the unvarying number. It consists of small trees or shrubs found in the warmer parts of the world.

2. *Med.*: The leaves of *Cicca disticha* and *racemosa* are sudorific, and used against syphilis. The root is violently purgative. Its succulent fruit, and that of *C. racemosa*, is subacid, cooling, and wholesome, while the seeds are cathartic.

çi'-çha, *s.* [Lat.]

Entom.: A genus of Homopterous insects, of the family Cercopidæ.

çi'-çi-ly, *s.* [Lat. *smili*, *scelis*; Gr. *σίσηλις*, *σισηλίς* (*smili*, *scelis*).] [SMELL.]

Bot.: The ordinary name for the genus Myrrhis.

¶ *Fool's cicely*: *Æthusa Cynapium.*

Rough cicely: *Tordylis Anthriscus.*

Sweet Cicely:

1. *Myrrhis odorata.*

"The smell of *Sweet Cicely* attracts bees, and the insides of empty hives are often rubbed with it."—*London: Encyclopædia of Gardening*, § 4,793.

2. An American name for Osmorrhiza, a genus of Umbelliferæ.

Wild cicely: *Anthriscus sylvestris.*

çi-çin'-di-ç, *s.* [Etym. doubtful. Hooker and Arnott suggest Gr. *κίκινος* (*kikinos*) = a curled lock, a ringlet, on account of the slender entangled stems and branches.]

Bot.: A genus of plants, order Gentianaceæ, tribe-order Gentianeæ. It consists of small annual branched herbs. Two are British, *Cicendia filiformis*, which has yellow flowers, and *C. pusilla*, which has pink flowers. Both are somewhat rare in Britain. *C. filiformis* is by some botanists called *Exacum filiforme.*

çi' çer, *s.* [Lat. *cicer* = a chick-pea. Possibly the Roman family of Cicero, which produced the world-renowned orator, derived their name from *cicer*, either, as Plutarch says, because one of the family had a flat excrescence like a chick-pea on his nose, or, as Pliny asserts, because the first of the name successfully cultivated vetches.]

Bot.: A genus of Leguminous plants, sub-order Papilionaceæ, tribe Viciæ. *Cicer arietinum*, the Chick-pea, is a native of Egypt and the Levant. It is cultivated in the south of Europe, in India, and elsewhere. It bears pale solitary violet flowers. A field in full bloom, and glistening with dew, is a beautiful spectacle, but an acid which it contains destroys the boot-leather of anyone who, walking over it, treads it down. Anglo-Indians call the seeds, gram. They are used in India for feeding horses.

çi-çe-ro'-ne (or as **çhiçh-er-o'-ne**), *s.* [Lat. *Cicero*, the Roman orator; so called from the talkativeness of guides.] A guide; one who explains the curiosities and interesting features of a place to strangers.

"He had not proceeded many steps from the monument before he beckoned to our *cicerone*."—*Sheridan.*

çi-çer-o'-ni-an, *a.* & *s.* [From Cicero.]

A. *As adj.*: Resembling the style of Cicero; noting an easy flowing style.

"My delivery . . . was *Ciceronian*."—*Lamb: My First Play.*

B. *As subst.*: An imitator of the style of Cicero. (*Hallam.*)

çi-çer-o'-ni-an-işm, *s.* [Eng. *ciceronian*; *-ism.*] An imitation of or resemblance to the style of Cicero.

"Great study in *Ciceronianism*, the chief abuse of Oxford."—*Milnes.*

çi-çer-o'-ni-an-ist, *s.* [Eng. *ciceronian*; *-ist.*] One who imitates the flowing, polished style of Cicero.

"That *elaborate* polishing of periods which had been the delight of the *Ciceronianists*."—*Encyc. Brit.* (ed. 9th) xiv. 362.

*** çich'-ling,** *s.* [CHICKLING.]

çich-or-a'-çe-æ, *s. pl.* [Lat. *cichorium*; Gr. *κιχώριον* (*kichórion*), *κιχόρη* (*kichóri*) = succory, chicory; Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: A sub-order of Composite plants, distinguished by their corollas being slit. The name was given by Jussieu. Lindley, following Decandolle, called it Ligulifloræ in his *Vegetable Kingdom*, though in his *Natural System of Botany* he had retained the name Cichoraceæ. The corolla, as stated before, is ligulate, or strap-shaped; the seeds, which are erect, have no albumen, and the stem has milky juice. [CICHORIUM, LIGULIFLORÆ.]

çich-or-a'-çe-ous, *a.* [Lat. *cichor(ium)*; *-aceous.*] Of the nature of or possessing the qualities and properties of chicory or succory

"Diuretics evacuate the salt serum: as all acrid diuretics, and the lactescent and bitter *cichoraceous* plants."—*Floyer.*

çich-or'-i-um, *s.* [Fr. *cichoris*. Name, written *κιχώριον* (*kichórion*), according to Pliny, of Egyptian origin.]

Bot.: Succory or chicory, a genus of Composite plants. *Cichorium Intybus*, distinguished by having the lower leaves runcinate and the heads usually in pairs, is a British plant, the origin of the cultivated chicory. It is found wild also on the Continent of Europe, in North Africa, in Siberia, and the North-west of India. The roots are boiled and eaten, or they are dried and used as coffee. (*Dr. Joseph Hooker, &c.*) *C. Endivia* is the common Endive. It is extensively cultivated in Europe, into which it was introduced from its native country India, in many parts of which it is called Kasnee. Properly speaking, Succory consists of the blanched leaves of *Cichorium Intybus* and Endive those of *C. Endivia*. *C. Endivia*, or Endive, is a wholesome salad, possessing bitter and anodyne qualities.

çich'-or-y, *s.* [Fr. *cichoris*, from Lat. *cichorium* (q.v.).]

Bot.: The *Cichorium Intybus* or Wild Succory. [CHICORY.]

*** çich'-pea,** *** cich-pease,** *s.* [CHICK-PEA.]

"A kind of small pulse, called a *Cichpease*."—*Peacham: Garden of Compleatness, Prof.* (Davies.)

çi-çin-dé'-la, *s.* [Lat. *cicindela* = a glow-worm, from *candela* = a candle. This is not the *cicindela* of modern entomologists. See def.]

Entom.: A genus of Coleopterous insects, the typical one of the family Cicindelidæ. They have very prominent eyes. They are of predatory habits, and are sometimes called Tiger-beetles. They are the most highly organized of all the Coleoptera. They can fly as well as run, and all their movements are agile. They are remarkable for the beauty of

CICINDELA.

their colours. Four species are British. The best known is *Cicindela campestris*, which is above half an inch in length, the anterior and posterior margins of the thorax, the basal joints of the antennæ of a rich copper colour, the rest of the thorax green, the elytra green, each with six cream-coloured spots; the under side of the body glossy bluish-green. It is common near London. The larvæ may be found in cylindrical burrows from six inches to a foot in depth, at the mouth of which they lurk for their prey, and the perfect insect in sandy spots during the summer months

çi-çin-dél'-i-dæ, *s. pl.* [Lat. *cicindela*, and fem. pl. suff. *-idæ.*]

Entom.: A family of carnivorous Coleoptera, section Adephaga, sub-section Geodephaga. Only one genus, Cicindela, is British.

çi-çin-ŏb-ŭl'-ŭs, *s.* & *a.* [Gr. *κίκινος* (*kikinos*) = a curled lock, a ringlet, and *ὀβολός* (*obolós*) = an old Greek coin worth about three half-pence.] [OBOLUS.]

cincinobulus fruit, *s.*

Bot.: A peculiar reproductive body in certain Fungals. It is more commonly called a cyst. (*Thomé.*)

çi-çin-ür'-ŭs, *s.* [Gr. *κιρσός* (*kirsós*) = a curled hair, and *οὐρά* (*oura*) = a tail.]

Ornithology:

1. The long spiral filaments of the extremity of the tail. (*McNicoll.*)

2. A genus of birds belonging to the Paradiseidæ, or Birds of Paradise.

*** çi-çis'-bé-işm,** *s.* [Ital. *cicisbeo*, and Eng. suff. *-ism.*] The conduct of a cicisbeo, the practice of dangling after married women.

çi-çis'-bé-o, *s.* [Ital. In Fr. *cicisbée*, *cajolerie*.]

1. *Lit.*: A term applied in Italy to a professed admirer of a married woman; a dangler about women.

†2. *Fig.*: A knot of ribbon attached to a sword-hilt, gun, &c.

*** çic'-la-tŏn,** *** çic-la-tun,** *** cic-la-toun,** *s.* [O. Fr. *ciglaton*; Sp. *ciclaton.*]

1. A sort of stuff, made sometimes of silk, sometimes of cloth of gold embroidered.

"Ther was many goutfanon,
Of gold, sendel and *ciclatoun*."
Alisaunder, 1,131.

2. A cloak or garment made of such material.

çi-cō'-ni-a (Lat.), *** çi-con-ie,** *** çy-con-y** (Eng.), *s.* [Lat. *ciconia* = a stork.] [STORK.]

Ornithology:

1. A stork, a member of the family Ciconiidæ.

"The *ciconia* fowl that is clepèd *cyconye*."—*Wycliffe: Jeremiah* viii. 7.

2. A genus of Wading Birds, the typical one of the sub-family Ciconiinæ. It belongs to the family Ardeidæ (Herons). The species have long conical bills, long red legs, with the three toes, which point forward, united by a membrane as far as the first joint, the hinder toe on the same level. The wings are of moderate length, the third, fourth, and fifth quills largest, the second a little shorter, and the first a little shorter still. There are two British species, *Ciconia alba*, the White Stork, and *C. nigra*, the Black Stork. [STORK.]

CICONIA ALBA

çi-cō'-ni-an, *a.* [Lat. *ciconi(a)*, and Eng. adj. suff. *-an.*] Consisting of or pertaining to storks.

"But when his evening wheels o'erhung the main,
Then conquest crown'd the fierce *Ciconian* train."
Pope: Homer's Odyssey, bk. ix., l. 47.

çi-cō-ni'-i-dæ, *s. pl.* [Lat. *ciconia*, and fem. pl. adj. suff. *-idæ.*]

Ornith.: A family of Wading Birds, containing the Storks, &c. More generally, however, it is reduced to a sub-family. [CICONIINÆ.]

çi-cō-ni-i'-næ, *s. pl.* [Lat. *ciconia*, and fem. pl. suff. *-inæ.*]

Ornith.: A sub-family of Wading Birds, family Ardeidæ. [CICONIA.]

† çic'-ō-ry, *s.* [CHICORY.]

¶ *Wild cicory*: *Cichorium Intybus.*

*** çic'-u-rāte,** *v.t.* [Lat. *cicuratus*, pa. par. of *cicuro* = to tame; *cicur* = tame, gentle.] To tame, to soften the character of

*** çic-u-rā'-tion,** *s.* [CICURATE.] The act of taming or softening in character

"This holds not only in domestic and manured birds, for then it might be the effect of *cicuration* or institution, but in the wild."—*Ray: On the Creation.*

çi-cū-ta (Lat.), *** çi-cute** (Eng.), *s.* [Lat. *cicuta* = the hemlock given as poison. Sp., Port., & Ital. *cicuta*; Prov. *cicuta*, *civada*; Fr. *ciguë*.]

1 *Bot.*: The Water-hemlock or Cowbane. A genus of plants, order Umbelliferæ. It has compound umbels with many rays, few or no bracts, but many small bracteoles. The

flowers are white, the fruit orbicular, or broadly ovoid, with solitary vittæ in the interstices of the ridges. The leaves are ternate or decompound. *Cicuta virosa*, which has doubly serrate lanceolate leaflets, is a tall plant of three or four feet high, found, though not very commonly, in England and the lowlands of Scotland by roadsides or the margins of lakes. It is a deadly poison. It may be the *κώνειον* (*kōneion*) (Hemlock) of the Greeks, which Socrates and others condemned to death were required to drink. An analogous species, *C. maculata*, found in America, is equally deadly.

2. The name for a shepherd's pipe made of the hollow stalks of hemlock. (*Buchanan.*)

çi'-ç-tine, *s.* [Lat. *cicuta*, and Eng. suff. *-ine* (*Chem.*).]

Chem.: An alkaloid supposed to exist in Water-hemlock, *Cicuta virosa*.

çid, *s.* [Arab. *sēid* = lord.]

1. An Arabian name for a chief or commander; applied specially in Spanish literature to Ruy Diaz, Count of Bivar, the celebrated champion of Christianity in the eleventh century

"The helmet was down o'er the face of the dead.
But his steed went proud, by a warrior led,
For he knew that the *Cid* was there."
Hemans: The Cid's Funeral Procession.

2. The name of a Spanish epic poem, celebrating the exploits of Ruy Diaz.

çi-dar-i-dæ, *s. pl.* [From Lat. *cidaris* (q.v.), and fem. pl. adj. suff. *-idæ*.]

Zool.: A family of Echinodermata; the body is subglobose, and covered with long, club-shaped spines.

çid-ar-is, *s.* [Lat., a turban or mitre; Gr. *κίδαρις* (*kidaris*), *κίταρις* (*kitaris*) = a cap of state worn by the Persian kings; Heb. כתר (*kether*) = a Persian diadem, Esther i. 11, ii. 17, vi. 8; כתר (*kathar*) = to surround.]

1. *Jew. Antiq.*: A name given to the mitre of the Jewish high-priests.

2. *Zoology*:

(1) A genus of Echini of hemispherical form, so called from their supposed resemblance to the cap of state. *Cidaris papillata*, a British species, occurring off the coasts of Shetland, is called the Piper-urchin, because the body presents a rude resemblance to a diminutive bagpipe.

(2) A genus of the Senectina or Snake-shells. They are pearlaceous, turbinate, generally smooth, with a round, not oblique aperture.

3. *Palæont.*: Cidaris ranges from the Trias to recent times.

***çid-ar-ite,** *s.* [Eng. *cidar*(*is*), and suff. *-ite*.]

Palæont.: A fossil specimen of the genus Cidaris; a fossil resembling Cidaris. The genus Cidaris occurs in the secondary strata. *C. florigemma* is a characteristic fossil of the Coral rag.

çi-der, ***çy-der,** ***çy-ser,** ***sy-dir,** ***si-dir,** *s. & a.* [Lat. *sicera*; Gr. *σικερα* (*sikera*), from Heb. שכר (*shekar*) = strong drink; Fr. *cidre*; Sp. *sidra*; Port *cidra*.]

A. *As substantive*:

*1. Strong drink; liquor made of the juice of any fruit pressed.

"He schal not drynke wyn and *sydir*."—*Wycliffe: Luke* i.

"... a kind of *cider* made of a fruit of that country ..."—*Bacon.*

2. A liquor made from the juice of apples expressed and fermented

"A flask of *cider* from his father's vats
Prime, which I knew, and so we sat and sat."
Tennyson: Audley Court.

¶ To make good cider the apples should be quite ripe, as the amount of sugar in ripe apples is 11·0, in unripe apples 4·9, in over ripe apples 7·95. The fermentation should proceed slowly. The strongest cider contains, in 100 volumes, 9·87 volumes of alcohol of 92 per cent., the weakest 5·21 volumes. (*Brande.*)

B. *As adj.*: Productive of cider; producing cider

"Worcester, the queen of the *cider* land, had but eight thousand ..."—*Macaulay: Hist. Eng.*, ch. iii.

cider brandy, *s.* A kind of brandy distilled from cider.

***cider-mill,** *s.* A mill in which apples are ground into pulp for the purpose of making cider.

cider-press, *s.* A press in which the juice is expressed from the apples after they have been ground into pulp.

cider-tree, *s.* *Eucalyptus Gunnii*, from the sap of which a kind of cider is prepared.

çi-der-çake, *s.* [Etym. doubtful.] The N.E.D. suggests that it may be a misprint for *culver-cake* (q.v.).

Bot.: A plant, *Polygonum Hydropiper*.

***çi'-der-ist,** *s.* [Eng. *cider*; *-ist*.] One who makes cider.

"When the *ciderists* have taken care for the best fruit, and ordered them after the best manner they could, yet hath their cider generally proved pale, sharp, and ill tasted."—*Mortimer.*

† **çi'-der-kin,** *s.* [Eng. *cider*; dimin. suff. *-kin* (q.v.).] An inferior kind of cider made by adding water to the crushed mass of apples remaining after the juice has been pressed out in the manufacture of cider.

ci-devant (pron. **çē'-dēv-ôñ**), *a.* [Fr. = hitherto, formerly; from Lat. *hicce* = here, and *de ab ante* = down or of from before.] Former, previous.

***çiel-ing,** *s.* [Ceiling.]

***çi-èr ge,** ***cerge,** ***serge,** *s.* [Fr., from Lat. *cereus* = waxen, *cera* = wax.] A wax candle used in the worship of the Roman Catholic Church.

"That bere in heven her *clergie clere*."
The Romaunt of the Rose. 6866.

***ciete-seour,** *s.* [City.] A citizen.

"The *cite seurete* of Ternana in Flanderis (to quhom thir ambassatouris first come) rycht desyrus to recouer their lyberte, refuset nocht thir offeris."—*Bellend. Cron.* fo. 39. b

çi-gar', ***se-gar,** *s. & a.* [Fr. *cigare*; Sp. *cigarro*; originally a kind of tobacco in the island of Cuba.] A small, cylindrical roll of tobacco for smoking.

"The fermented leaves being next stripped of their middle ribs by the hands of children are sorted anew, and the large ones are set apart for *making cigars*."—*Ure: Dict. of Arts, &c.*

¶ Obvious compounds: *Cigar-box, cigar-holder, &c.*

cigar-bundler, *s.* A machine for placing cigars in bundles that they may be tied together. It consists of a clamping-press having jaws of such shape and capacity as the size of the cigar and the number desired in a bundle may warrant.

cigar-lighter, *s.* A device for lighting cigars. It consists of a little gas-jet suspended by an elastic tube.

cigar-machine, *s.* A machine for making fillers of cigars and wrapping them.

cigar-press, *s.* A press having a motion in two directions, one to compress the cigars in their rows, and the other to press them vertically

cigar-steamer, *s.* A peculiar form of craft, shaped like a spindle, and constructed by Winans, of Baltimore. The first was built in Baltimore—length 6 5 feet, diameter 16 feet, the second in St Petersburg—length 70 feet, diameter 9 feet; the third in Havre—length 72 feet, diameter 9 feet; the fourth in Isle of Dogs length 236 feet, diameter 16 feet. The propeller of the first was placed around the middle of the vessel, the second had a propeller beneath her bottom; the third is fitted for trying propellers in various positions; and the fourth has a propeller at each end. (*Knight.*)

çig-ar-ette, *s.* [A dimin. of Fr. *cigare*.] A small cigar; more generally, a small quantity of fine tobacco rolled in paper and used for smoking

"We shall celebrate our reconciliation in a *cigarette*."—*Black: Princess of Thule*, ch. x.

cigarette-filler, *s.* A little implement for introducing the finely-cut tobacco into the paper envelope. It has two forms: a tube and a wrapper. (*Knight.*)

cigarette-machine, *s.* A machine used in the production of cigarettes Adorno's cigarette-machine uses an endless roll of paper. It cuts, wraps, and folds the paper around a regulated quantity of tobacco, which is supplied at one end of the machine, while the finished cigarettes emerge at the other end. (*Knight.*)

***cild,** *s.* [A.S.] [Child.]

çil'-ér-y, *s.* [Celura.]

Arch.: The drapery or foliage carved on the heads of columns, in Moorish or Spanish architecture.

CILERY.

çil'-i-ç, *s. pl.* [Lat. nom. pl. of *cilium* = an eyelash.]

1. *Anat.*: Hair-like processes of extreme delicacy of structure and minuteness of size. They are from $\frac{1}{1000}$ to $\frac{1}{1500}$ of an inch in length. They are arranged in rows, and are affixed by their bases to the epithelium which covers the surface on which they play.

2. *Bot.*: Long hairs, like eyelashes, situated upon the margins of leaves, &c.

"Isolated cells, as spores of sea-weed, occasionally have fine filaments, or *cilia*, developed on their surface."—*Balfour Botany*, pt. i., § 7.

3. *Zool.*: Hair-like filaments, which project from animal membranes, and are endowed with quick vibratile motion, as in the infusoria, sponges, and polyzoa.

çil-i-ar-y, *a.* [Fr. *ciliaire*, from Lat. *cilium* = an eyelash.]

1. *Anat.*: Belonging to the eyelashes

2. *Zool. & Bot.*: Pertaining to the cilia in plants and animals

ciliary arteries, *s. pl.*

Anat.: The arteries supplying various parts of the eye with blood. They are divisible into three sets, the short, the long, and the anterior ciliary arteries. (*Quain.*)

ciliary ganglion, *s.* The same as the ophthalmic or lenticular ganglion. (*Quain.*)

ciliary ligament, *s.*

Anat.: The circular portion dividing the choroid membrane from the iris, and adhering to the sclerotic coat. [Choroid.]

ciliary motion, *s.* A motion of cilia or any part of any organism possessing them. In animals they move like a field of grain agitated by the wind. Ciliary motion exists in man in various parts, as for instance on the mucous membrane of the nasal cavities, on the inner surface of the lacrymal sac and canal, on the membrane of the larynx, trachea, and bronchial tubes. (*Todd & Bowman: Physiol. Anat.*, vol. i., ch. 2, p. 64.)

"The terms vibratory motion and *ciliary motion* have been employed to express the appearance produced by the moving cilia; the latter is here preferred, for it is used to express the whole phenomenon, as well as the mere motion of the cilia."—*Dr. Sharpey, in Todd's Cyclopædia of Anat. and Physiol.*

ciliary muscle, *s.*

Anat.: A muscle attached to the choroid of the eye.

ciliary nerves, *s. pl.*

Anat.: Two or three nerves situated at the inner side of the optic nerve. Their full appellation is *Long ciliary nerves*. (*Quain.*)

ciliary processes, *s. pl.*

Anat.: White folds at the margin of the uvea in the eye, and proceeding from it to the crystalline lens.

"The *ciliary processes*, or rather the ligamenta observed in the inside of the sclerotick tunicles of the eye, do serve instead of a muscle, by the contraction, to alter the figure of the eye."—*Ray: On the Creation.*

ciliary zone, *s.*

Anat.: A term for the appearance which the pigment between the ciliary processes leaves on the hyaloid membrane, like the disk of a flower; also called *Corona ciliaris*.

çil-i-â'-tę, *s. pl.* [Lat. *cili*(*um*) = an eyelash, and neut. pl. adj. suff. *-ata*.]

Zool.: An order of Infusoria, having the body more or less completely clothed with cilia. These cilia are vibratile, and are used for locomotion or obtaining food. Genera, Vorticella, Vaginicola, &c.

çil'-i-âte, çil'-i-â-tĕd, *a.* [Lat. *cili*(*um*) = an eyelash, and Eng. suff. *-ate*, *-ated*.] Furnished with cilia or fine hair. Used—

1. *Bot.*: Of a leaf with parallel filaments or bristles, resembling fine hairs.

2. *Anat.*: Of a surface covered with filaments.

"But a ciliated surface is not affected as all in the same manner."—*Todd & Bowman: Physiol. Anat.*, vol. i., ch. ii., p. 48.

3. *Zool.*: Provided with vibratile cilia.

çĭl-ĭ-ā'-tion, *s.* [As if from Lat. *ciliatio.*]

1. Ciliated state or condition.

2. The ciliary apparatus of any organism.

çĭl-ĭ-ā'-tō, *in compos.* [Mod. Lat. *ciliat(us)*, with o connective.] Having cilia.

ciliato-dentate, *a.*

Bot.: Having teeth, and these ciliated.

ciliato-serrate, *a.*

Bot.: Having serrations, each of which terminates in a hair.

• **çĭl'-ĭçe,** *s.* [Fr. *cilice*; Lat. *cilicium*, from Gr. *κιλίκιον* (*kilikion*) = coarse cloth, orig. of (Cilician) goats' hair.] A rough garment worn next the skin as a penance; a hair shirt.

"We have heard as much of monks . . . with their cheese crowns, hair cilices, and vows of poverty."—*Carlyle: Past and Present*, bk. ii., c. i.

• **çĭl-ĭf'-çĭl-ous,** *a.* [Eng. *cilic.*] Made of goats' hair.

"A coarse garment, a *cilicious* or sackcloth habit."—*Browne: Vulgar Errours*, bk. v., ch. xv.

çĭl-ĭ-ĭf'-le, *s.* [Lat. *cilia*] = fine hair, and dimin. suff. *-ella.*]

Entom.: A fringe. (*McNicoll.*)

çĭl'-ĭ-ĭ-form, *a.* [Lat. *cilia* = fine hair, and *forma* = form.] Having the form of cilia, very fine or slender. Especially applied to the teeth of certain fishes, as of the perch, when very numerous and all equally fine.

• **çĭl-ĭ-ō-brăch-ĭ-ā'-tæ,** *s. pl.* [Lat. *cilia* = eyelashes, and *brachiatus*, pl. of *brachiatus* = having branches like arms.]

Zool.: Owen's name for the Polyzoa (q.v.).

• **çĭl-ĭ-ō-brăch'-ĭ-ate,** *a.* [Lat. *cilia* = fine hair; *brachium* = the arm, and Eng. adj. suff. *-ate.*]

Physiol.: Having the arms furnished with cilia, as in Polyzoa.

çĭl-ĭ-ō-flăg'-ĕl-lā-tæ, *s. pl.* [Mod. Lat. from *cilium* and *flagellum* (both which see).]

Zool.: A group of free-swimming Infusorians, moving by means of lash-like flagella, and having a more or less complete ciliature.

çĭl-ĭ-ō-flăg'-ĕl-late, *a.* [Ciliofla-ellata.] Belonging to the Cilioflagellata.

çĭl-ĭ-ō-grā'-dæ, çĭl-ĭ-ō-grā'-dĭ, *s. pl.* [Ciliograde.]

Zool.: The name given by De Blainville to the Ctenophora (q.v.).

çĭl'-ĭ-ō-grāde, *a.* & *s.* [Fr. *ciliograde*, from Lat. *cilia* = fine hair, and *gradior* = to step.]

A. *As adj.*: Belonging to the Ctenophora.

B. *As subst.*: An animal belonging to the Ctenophora (q.v.).

çĭl'-ĭ-ŭm, *s.* [The sing. of *cilia* (q.v.).]

Cill, *s.* [Sill.]

Arch.: The timber or stone at the foot of a door, &c.

■ *Ground-cills* are the timbers on the ground which support the posts and superstructure of a timber building. The name of *cill* is also given to the bottom pieces which support quarter and truss partitions. (*Gwilt.*)

• **çĭl'-lĭ-bēb,** *s.* [Silabub.]

çĭl'-lō, çĭl-lō'-çis, *s.* [Lat. *cilium* = an eyelash, and suff. *-osis* (*Med.*).]

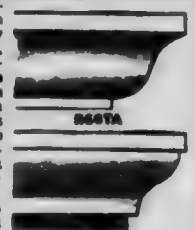
Med.: A spasmodic trembling of the upper eyelid.

çĭl-lō'-lo, *a.* [Eng. *cillo*; *l* connect., and suff. *-ic.*] Pertaining to, or affected with, cillo (q.v.).

çĭlls, *s. pl.* [Cill.] A naval term applied to horizontal pieces of timber to ports or scuttles. Generally pronounced by sailors *sell*, as *port-sell.* (*Smyth: Sailor's Word-Book.*)

çĭm-ā'-çe, *s.* [Gr. *κῦμα* (*kuma*) = a wave.] [Cyma.]

Arch.: A moulding, taking its name from its contour resembling that of a wave, being hollow in its upper part, and swelling below. Of this moulding there are two sorts, the *cima* (*or cyma*) *recta*, just described, and the *cima reversa*, wherein the upper part swells and the lower is hollow. By the workmen these are called *ogee* (q.v.). (*Gwilt.*)



CIMA.

çĭm'-ex, *s.* [Chinese, Sinae.]

• **çĭm'-bĭl** (1), *s.* [Ital. *cimbello.*] A kind of confectionery or cake.

• **çĭm'-bĭl** (2), • **çĭm'-bale,** *s.* [Cymbal.]

çĭm'-bĭre, *s.* [Cf. Gr. *κίμβιξ* (*kimbix*) = a miser.]

Entom.: A genus of hymenopterous insects, family Tenthredinidæ. Mr. Stephens enumerated eight British species of the genus, some of which may not be properly distinct from each other. *Cimbex Griffithii* is about an inch long. It is reddish-brown, with a yellow abdomen.

çĭm-bĭ-ō, *s.* [Gr. *κυμβίον* (*kumbion*) = (1) a small cup, (2) *med. def.*, dimin. of *κυμβη* (*kumbē*) = the hollow of a vessel.]

Arch.: A fillet, string, list, or cornice.

Çĭm'-bĕr-ĭan, *a.* & *s.* [Lat. *Cimbria.*]

A. *As adj.*: Cimbric; pertaining to Cimbria.

"The event commonly called the 'Cimbrian Deluge' is supposed to have happened about three centuries before the Christian era."—*Lyell: Principles of Geology*, ch. xxi.

B. *As subst.*: A native of Cimbria.

Çĭm'-brĭc, *a.* & *s.* [Lat. *Cimbricus.*]

A. *As adj.*: Pertaining to the Cimbri, an ancient tribe inhabiting Northern Germany, and the Chersonese now called Jutland.

"On helm and harness rings the Saxon hammer,
Through *Cimbric* forest runs the Northman's song."
Longfellow: The Arsenal at Springfield.

B. *As subst.*: One of the tribe of the Cimbri; a Cimbrian.

• **çĭm-bĭ'-ĭ-arch,** *s.* [Lat. *cimbiarcha*; Gr. *κιμβιάρχης* (*kimbiarchēs*) = a treasurer: *κιμβίον* (*kimbion*) = a treasury, and *ἀρχός* (*archos*) = a leader, a chief.]

1. *Eccles.*: A superintendent or keeper of plate and other valuable things belonging to a church; a church-warden. (*Bailey.*)

2. *Arch.*: A name given to the apartment where the plate and vestments are kept in churches. (*Gwilt.*)

çĭ-mĭx, *s.* [Lat. *cimex* (genit. *cimicis*) = a bug.]

• 1. *Ord. Lang.*: A bug.

2. *Entom.*: A genus of hemipterous insects the typical one of the family Cimicidæ. (*Cimex lectularius* is the Bed-bug (Bug.) There are analogous species parasitic on pigeons, swallows, and bats.

çĭm-ĭ-ç, *s.* [Cimbria.]

• **çĭm-ĭçe,** *s.* [Ital. *cimice*, from Lat. *cimex* (genit. *cimicis*).] A bed-bug. [Cimex.]

çĭm ĭç-ĭc, *a.* [Lat. *cimex* (genit. *cimicis*) = a bug.] Of or pertaining to the cimex or bug.

cimicic acid, *s.*

Chem.: $C_{18}H_{30}O_2$. A yellow crystallizable acid, having a rancid odour, extracted by alcohol and ether from a kind of bug (*Rhaphigaster punctipennis*).

çĭm-ĭç-ĭ-dæ, *s. pl.* [Lat. *cimex*, genit. *cimicis*), and pl. adj. suff. *-idæ.*]

Entom.: A family of hemipterous insects, of which Cimex is the type. It is of the tribe Geocores (Land-bugs). They have a short rostrum consisting of two or three joints only, depressed bodies, and, with the exception of the typical genus Cimex, many British genera, Cimex, Acanthia, Anthocoris, Aradus, Agramma, Tingis, and Dictyonota.

çĭm-ĭç-ĭ-fŭ-gŭs, *s.* [Lat. *cimex* (genit. *cimicis*) = a bug, and *fugo* = to drive away.] A name of a plant because in Siberia one of the species is used to drive away bugs and similar insects.

Bot.: A genus of perennial herbs, with racemes of whitish flowers, and acrid poisonous roots. Order, Ranunculaceæ. Four species are cultivated in Britain, the best known being *Cimicifuga fœtida*, the "Stinking Snake-root," or Bug-wort. It was introduced in 1777 from Siberia. It occurs also on the Carpathian Mountains, and the north-west coast of America. *C. arguteana*, formerly called *Actæa racemosa*, is the Black Snake-root of America, supposed to be an antidote to the venom of serpents.

çĭm'-ĭ-çine, *a.* [Lat. *cimex* (genit. *cimicis*), and Eng. suff. *-ine.*] Smelling of bugs.

çĭ'-mĭex, *s.* [Cimex.] The bed-bug.

çĭm'-ĭ-tēr, • **çĭm'-ĭ-tēr,** **sçĭm'-ĭ-tēr,** • **sçĭm'-ĭ-tēr,** *s.* [Fr. *cimeterre*; Sp. & Port. *cimbarra*; Ital. *scimitarra*, from Biscayan *cimitarra* = with a sharp edge; or corrupt. from Per. *shimshir* (*Mahn.*).] A short curved sword with a convex edge, used by the Persians and Turks.

Çĭm mĕr'-ĭ-an, *a.* [Lat. *Cimmerius*, from Gr. *κιμμέριος* (*kimmerios*).]

1. *Lit.*: Pertaining to the Cimmeri, a fabulous race stated by Homer to have lived "beyond the ocean stream," and in later ages said to have lived in very ancient times in the Tauric Chersonese (now called the Crimea), in a state of perpetual darkness.

2. *Fig.*: Without any light; intensely and profoundly dark.

"Let *cimmerian* darkness be my only habitation."
Sidney: Arcadia, bk. ii.

çĭ-mŏl'-ĭ-a, *s.* [Cimolite.]

çĭ mŏ-lĭ-an, *a.* [Eng. *cimoli(a)*; *-an.*] Pertaining to cimolite.

çĭ-mŏ-lĭ-or'-nĭs, *s.* [Gr. *κιμωλία* (*kimōlia*) = Cimolian earth [Cimolite], and *ὄρνις* (*ornis*) = a bird.]

Paleont.: A genus founded on remains from the Maidstone Chalk. The late Prof. Owen thought they were avian, but Bowerbank identified them with *Pterodactylus giganteus.*

çĭm-ō-lĭ-ite, *s.* [Fr. *cimolite*, from Gr. *κιμωλία* (*kimōlia*) = Cimolian earth, from *Κιμωλος* (*Kimōlos*), Lat. *Cimolus*, an island of the Cyclades, distinguished for its chalky soil, now Cimoli or Argentiera.]

Min.: A light grey, white, or reddish silicate of alumina, occurring sometimes massive or of a slaty texture. It is very soft. Sp. gr. 2·18—2·30. Compos.: Silica, 62·30—65·76; alumina, 20·97—24·23; sesquioxide of iron, 0—1·25; water, 9·31—12·56. It occurs in Argentiera; also at Nagpore, Central India, and in some parts of Russia. (*Dana.*) The Nagpore specimens have been called the **Hunterite** (q.v.).

çĭnch, *s.* A saddle-girth made of leather, horse-hair, canvas or cordage, with long thongs of leather at the ends; hence (*U.S. Slang*) a firm grasp, complete control, a "sure thing."

çĭnch, *v.* To gird with a cinch; hence (*U.S. Slang*) to subdue by force, to control. (*U.S. Slang.*)

çĭn chŏ-nĕr'-ĭn-ĭc, *a.* [From Eng. *cinchon(a)* (q.v.); Gr. *μερος* (*meros*) = a part, and Eng. suff. *-ic.*]

cinchonerythric acid, *s.*

Chem.: $C_{11}H_8N_2O_{10}$. An acid formed by the action of nitric acid on cinchonic acid. It is easily soluble in dilute nitric acid. Its calcium salt yields by dry distillation pyridine C_5H_5N.

çĭn-chō'-na, *s.* [Said to have been named in honour of the Countess of Chinchon, Vice-queen of Peru, who was cured of a fever in 1638, by the use of this remedy.]

1. *Bot.*: A genus of trees found exclu-

grow on the Andes in Peru, and adjacent countries, and recently introduced into India, producing a medicinal bark of great value

CINCHONA.

1. Plant. 2. Bud. 3. Flower. 4. Fruit.

known as Peruvian bark, Jesuit's bark, &c. The Jesuits introduced it into Europe. There are many species of the genus.

2. *Med.*: The bark procured from the Cinchona-tree.

cinchona bark, *s.*

Pharm.: The barks of several species of Cinchonaceæ are used in medicine, on account of the extraction of the alkaloids, quinine, cinchonine, &c., which they contain. The following are the most important:—*Cinchona flava* Cortex, Yellow Cinchona Bark, which occurs as quills covered with a brown epidermis, mottled with whitish yellow lichens, and also in flat cinnamon-coloured pieces. They break with a fibrous fracture and the scrape of a pewter. Yellow bark is rich in quinine, and 100 grains should yield not less than two grains of alkaloid. It is derived from *C. Calisaya*, which grows in the peculiar cloudy regions of the Andes. – *C. pallida* Cortex, Pale Cinchona Bark, from *C. condaminea*. It occurs always in quills, covered with crustaceous lichens. Its fracture is short and not fibrous. It contains chiefly cinchonine. Two hundred grains of the bark yield about one grain of alkaloid. –*C. rubra* Cortex, Red Cinchona Bark. The bark of *C. succirubra*. This species appears to thrive in India. It occurs in flattened, rough pieces, dark-brown red pieces, which are covered with a brown-red epidermis. It breaks with a red fibrous fracture. It contains about equal quantities of cinchonine and quinine, and 100 grains of the powdered bark should yield not less than one and-half grains of alkaloid. The yellow bark is used in the form of decoction, extract, infusion, and tincture. The pale bark is contained in *Tinctura Cinchonæ Composita* and in *Mistura Ferri Aromatica*. The cinchona barks contain besides the alkaloids, also certain acids having astringent properties, and are valuable as tonics in cases of great debility. (*Garrod's Mat. Medica.*) For properties of the alkaloids see QUININE and CINCHONIA. Cinchona barks rich in quinine generally contain much lime, and their solutions are precipitated by sodium sulphate. Cinchona barks are examined as follows. 100 grains of the yellow bark are reduced to powder, and are thoroughly exhausted by boiling, maceration, and percolation, with water acidulated with hydrochloric acid. The colouring matter is precipitated from the liquid by adding plumbic acetate, the solution being kept acid. It is then filtered, and to the filtrate caustic potash is added till the precipitate first formed by it is redissolved. This solution is then shaken with successive quantities of ether, till a drop of the ether evaporated to dryness leaves no residue. The ether solutions are then evaporated to dryness, and the residue of alkaloids is weighed. In testing the pale and red barks use chloroform instead of ether. When a bark containing quinine or cinchonine is heated in a test-tube a characteristic red vapour is given off, condensing to a carmine red liquid. It is also called Jesuit's bark and Peruvian bark.

cinchona bases, *s. pl.*

Chem.: Alkaloids contained in Cinchona bark. These can be separated from each other by adding ether, which dissolves the quinine and amorphous alkaloid, evaporating and dissolving in proof spirit acidulated with one-twentieth of sulphuric acid, and adding alcoholic iodine, which precipitates the quinine as iodo-sulphate, which is dried at 100°. One part equals 0·565 of quinine. To the liquid sulphurous acid is added, neutralised with caustic soda, and the alcohol expelled by evaporating on a water bath; on adding excess of soda the amorphous alkaloid is precipitated. The part insoluble in ether is dissolved in 40 parts of water and a little sulphuric acid, the solution being faintly alkaline. A solution of Rochelle salt $KNaC_4H_4O_6$ is then added, and it is allowed to stand for twelve hours. The cinchonidine is precipitated as tartarate, which is dried at 100°, and one part represents 0·804 of cinchonidine. To the filtrate iodide of potassium is added, which precipitates quinidine as hydriodide. One part dried at 100° equals 0·718 of quinidine. To the filtrate caustic soda is added, which precipitates the cinchonine, which is dried at 100° (See *Watts: Dict. of Chem.*)

çin-chôn-ā-çē-æ, *s. pl.* [Mod. Lat. *cinchona*(a), and Lat. fem. pl. adj. suff. *-aceæ*.]

Bot.: A large order of plants belonging to an alliance called after it, Cinchonales. The calyx, which is simple, is superior, as is the corolla, which is tubular and of regular form. The stamens, which are definite in number, arise from the corolla all on the same line and alternate with its segments; the anthers are straight, bursting longitudinally. The ovary is inferior, usually two-celled, with few or many seeds; the fruit splitting into two cocci, or indehiscent and dry, or succulent. The leaves, which are simple, are opposite or verticillate, with interpetiolar stipules; this last character distinguishing them from the Galiaceæ, to which they are much akin. Lindley divides it into two tribes: *Coffeæ*, in which the ovary have only one or two seeds in each cell, and *Cinchoneæ*, in which it is many-seeded. (See these words.) In 1845, Lindley enumerated 300 genera, and estimated the known species at 2,500. Though none are British, yet they are so abundant in tropical countries as to constitute about one twenty-seventh part of the flowering plants. Some are trees, others shrubs, and yet others herbaceous plants. Many are most valuable tonics, febrifuges, emetics, and purgatives. (CINCHONA.) A few are poisonous, whilst, on the contrary, Coffee, which belongs to this order, is highly nutritive. Some have eatable fruits, and others are used in dyeing.

çin-chô-nā-çeous, *a.* [Eng. *cinchon*(a), and suff. *-aceous*.]

Bot.: Of, or pertaining to, Cinchona.

çin-chô-næ, *s. pl.* [Mod. Lat. *cinchona*, and Eng., &c. suff. *-ads*.]

Bot.: The English rendering or equivalent of the term Cinchonaceæ (q.v.).

çin-chô-næl, *a.* [Mod. Lat. *cinchona*, and Eng. suff. *-al*.]

Bot.: Pertaining to the alliance Cinchonales, as the Cinchonal alliance.

çin-chô-nā-lēş, *s. pl.* [Mod. Lat. *cinchona*, and Class Lat. pl. suff. *-ales*.]

Bot.: An alliance of epigynous exogens, with dichlamydeous monopetalous flowers, and a minute embryo lying in a large quantity of albumen. Lindley includes under it the following orders: Vaccinaceæ, Columelliaceæ, Cinchonaceæ, Caprifoliaceæ, and Galiaceæ (q.v.).

çin'-chôn-āte, *s.* [Eng. *cinchon*(a), and suff. *-ate* (*Chem.*) (q.v.).]

Chem.: A salt of cinchonic acid.

çin-chô-nē-æ, *s. pl.* [Mod. Lat. *cinch-a*, and Class Lat. pl. suff. *-eæ*.]

Bot.: A tribe of Cinchonaceæ (q.v.). It contains the families Hamelidæ, Ixoridæ, Hedyotidæ, Cinchonidæ, and Gardenidæ (q.v.).

çin-chô-nī-ą, *s.* The same as CINCHONIS.

çin-chŏn'-ic, *a.* [Eng. *cinchon*(a), and suff. *-ic*.] Of, or derived from, Cinchona (q.v.).

cinchonic acid, *s.*

Chem.: $C_{11}H_{13}O_6$. An acid formed by treating cinchomeronic acid with sodium amalgam $C_7H_5NO_6 + 6H + 3H_2O = 2NH_3 + C_{11}H_{14}O_6$. It forms deliquescent white crystals.

çin-chŏn'-I-çine, *s.* [Eng., &c. *cinchonic*, and suff. *-ine*; or Mod. Lat. *cinchona*; Gr. *eidos* (*eidos*) = figure, image, resemblance (?), and Eng. suff. *-ine*.]

Chem.: $C_{19}H_{22}N_2O$. An alkaloid obtained by heating acid sulphate of cinchonidine for several hours to 130°. The base is liberated by caustic soda, and taken up by absolute ether; it forms a slightly yellow viscous mass, which melts at 55°. It gives no colour with chlorine and ammonia. The hydrochlorate gives a white precipitate with hypochlorite of sodium which distinguishes it from cinchonine and cinchonidine, which give no precipitate. It forms crystalline salts. It turns the plane of polarisation feebly towards the right. (*Watts: Dict. of Chem.*)

çin-chŏn'-I-dæ, *s. pl.* [Mod. Lat. *cinchona*, and fem. pl. adj. suff. *-idæ*.]

Bot.: A family of plants, tribe Cinchoneæ.

çin-chŏn'-I-dine, *s.* [Mod. Lat. *cinchona*, and Gr. *eidos* (*eidos*) = form, appearance.]

Chem.: $C_{19}H_{24}N_2O$. An organic alkaloid found in Peruvian bark. It crystallises from alcohol in anhydrous needles, gives no fluorescence when pure, and no green colouration with chlorine and ammonia. It differs from cinchonine by its turning the plane of polarisation powerfully towards the left.

çin-chŏn-in, çin'-chŏn-ine, *s.* [Eng. *cinchon*(a); suff. *-in*, *-ine* (*Chem.*).]

Chem.: $C_{19}H_{22}N_2O$ = cinchonia, an organic alkaloid contained with quinine in Peruvian bark, especially in *Cinchona condaminea*. It is separated from quinine by its sulphate being more soluble. Cinchonine crystallises in small transparent four-sided prisms. It is slightly soluble in water, but dissolves easily in hot alcohol. It melts at 165°. It is a powerful base, and forms crystalline salts with acids. It turns the plane of polarisation powerfully towards the right.

çin-chô-nin'-ic, *a.* [Eng. *cinchonin*; *-ic*.]

cinchoninic acid, *s.*

Chem.: $C_9H_7NO_2$. A dibasic acid obtained by the oxidation of cinchonine by nitric acid. Sp. gr., 1·4. It is a white crystalline substance soluble in water; when treated with nitric acid it is converted into quinolic and cinchomeronic acids.

çin'-chôn-işm, *s.* [Eng. *cinchon*(a), and suff. *-ism*.]

Path.: The disturbed condition of the body caused by over-doses of cinchona.

"The condition here called *cinchonism* is marked by the occurrence of giddiness, deafness, and a sense of buzzing in the ears. – *Watson: Lectures on the Principles and Practice of Physic*, lect. xi.

çin-chôv'-ą-tine, *s.* [Mod. Lat. *cinch*(*ona*), *ovat*(*a*), and suff. *-ine*. The Cinchona ovata being the white quinquina of Condamine, a species of the Cinchona genus.]

Chem.: Aricine, $C_{28}H_{36}N_2O_4$, occurs with Cuscoine in Cusco Cinchona bark, which gives off brown vapours when heated. Aricine crystallises in white prisms, which melt at 188°.

çin-çin-nās, *s.* [Lat. = a curl.]

Bot.: A cyme developed in a curled manner.

çin-clid'-ē-tus, *s.* [Gr. κιγκλίς (*kinglis*) = a lattice, and ὦδους (*odous*), genit. ὀδοντός (*odontos*) = a tooth.]

Bot.: A genus of Mosses, found floating in streams. Tribe, Hvaginulati. The name is derived from the manner in which the cilia of the peristome are united in net like parcels. *Cinclidotus fontinaloides* grows in tufts on the margin of lakes and rivers, or on stones in the channel of streams.

çin-cli-næ, *s. pl.* [Mod. Lat. *cinclu*(*s*), Lat. fem. pl. adj. suff. *-inæ*.]

Ornith.: The Dippers, a sub family of Cinclidæ, rostral birds, belonging to the family Merulidæ or Turdidæ.

çin'-clis (*pl.* **çin'-clĭ-dēş**), *s.* [Gr. κιγκλίς (*kinglis*) = a lattice.]

Animal Physiol.: One of the openings in the bodies of sea-anemones, probably serving to discharge the thread-cells or cnidæ.

çin-clō'-ra-mą, *s.* [Gr. κιγκλίς (*kinglis*) = a water-ouzel, and ὅραμα (*horama*) = the body.]

Swaith. : A genus of birds, closely allied to the Shrikes. They are natives of Australia and the East Indies.

çĭn'-clĭs, *s.* [Gr. *κιγκλος* (*kinglos*) = a wagtail or ousel.]

Zoolh. : The type-genus of the sub-family Cinclinæ (q.v.). They have a very straight slender bill, with a notched lip; wings rounded, of moderate length; a very short even tail; and large exceedingly strong feet. One species (*C. aquaticus*), the Common Dipper or Water-ousel, occurs in Britain. It is rather more than seven inches long, with the upper parts ashy-brown, the breast pure white, the belly rusty, the tail blackish. It is found throughout Europe and part of Asia. It breeds, among other places, in England, making a mossy nest ten or twelve inches in diameter by seven or eight deep, and places it in a cavity in a moss-covered rock near the mountain streams which it frequents and into which it dips and dives.

çĭnc'-tō pĭăn'-ŭ-lə, *s.* [Mod. Lat., from Lat. *cinctus* = girt, girdled, and *pianula* (q.v.).]

Bot. : The collared embryo of a sponge.

çĭnc'-tō-pĭăn'-ŭ-lər, *a.* [Eng., &c. *cincto-pianul(a)* ; *-ar.*] Resembling a collared infusorium, as does the embryo of a sponge.

çĭnc'-tūre, *s.* [Lat. *cinctura* = a girdle, from *cingo* = to gird; Ital. & Sp. *cintura*; Prov. *centura*, Fr. *ceinture.*]

I. *Ordinary Language :*

1. *Lit.* : A belt, a girdle; something worn round the body, to fasten or confine the dress.

"such is her sovereign mien, her dress
(A vest, with woollen *cincture* tied.)"
Wordsworth : The White Doe of Rylstone, c. viii.

***2.** *Fig.* : An inclosure, a ring-fence.

"The court and prison being within the *cincture* of one wall." *Bacon. Henry VII.*

II. *Arch.* : The ring, list, or fillet at the top and bottom of a column, which divides the shaft of the column from its capital and base. (*Gwilt.*)

† çĭnc'-tūre, *v.t.* [Cincture, *s.*] To surround, to with a girdle; to gird, to encircle.

"On high the palms their graceful foliage spread,
Cinctured with roses the magnolia towers."
Hemans. Modern Greece.

çĭnc'-tūred, *a.* [Cincture, *s.*] Having a cincture or girdle; girded. (*Sir W. Scott.*)

çĭn-dēr, * **çyn-dĭr,** * **çyn-dyr,** * **syn-der,** * **syn-dyr,** *s.* & *a.* [A.S. *sinder, synder*; Icel. *sindr*; Sw. *sinder* = slag, dross; Dut. *sintels* = cinders; Dan. *sinder, sinner* = a spark of ignited iron; Ger. *sinter* = dross of iron, scale; Icel. *sindra* = to glow, to throw out sparks. Not from Fr. *cendre*, though this word has affected the spelling.

Spenser. The Magnificence, etc.

† **çĭn'-dēr-ў,** *a.* [Eng. *cinder*; *-y.*] Pertaining to, or resembling, cinders; consisting of cinders.

çĭn-ĕ-fĭe'-tĭon, *s.* [Fr., from Lat. *cinefactio*, from *cinis* = ashes, and *factio* = a making, *facio* = to make.] The act or process of reducing to ashes, cineration. (*Crabb.*)

çĭn-ĕ-mĭt'-ĭc, çĭn-ĕ-mät'-ĭ-cəl, &c. [Kinematic, &c.]

çĭn ĕm-ăy'-mə, *s.* [From Gr. *κινέω* (*kineō*) = to set in motion; *ἐγχυμα* (*engchuma*) = infusion; *ἐν* (*en*) = in; and *χεω* (*cheō*, = to pour.]

Bot. Physiol. : A kind of tissue consisting of irregularly branching and anastomosing vessels. They are largest in plants having milky juice, and smallest in those which have transparent juice. It is called also Laticiferous Tissue (q.v.).

çĭn-ĕm-chўm'-ə-tŏŭs, *a.* [Eng. *cinenchyma*; *-ous* connective, and suff. *-ous.*] Pertaining to, or composed of, cinenchyma; laticiferous.

çĭn ĕr-ā'-ŏŭs, *a.* [Lat. *cinereus*, from *cinis* = ashes.] Like ashes, ash-coloured, ash-like.

çĭn ĕr ār'-ĭ ə, *s.* [Lat. *cinerarius*, from *cinis* = ashes. The genus is so called from the ash-coloured down covering the surfaces of the leaves.]

Bot. : A genus of plants akin to Senecio, or according to Sir Joseph Hooker, ranked under it as a sub-genus. Loudon enumerates thirty-one species cultivated in English gardens, but there are endless varieties produced by seed. They are all of various shades of red or blue, with or without white markings.

çĭn'-ĕr-ə-rў, *a.* [Lat. *cinerarius* = pertaining to ashes; *cinis* = ashes.] Pertaining to or containing, ashes.

cinerary urn, *s.* An urn or vessel used by the ancients to preserve the ashes of the dead; a sepulchral urn.

* **çĭn-ĕr-ā'-tĭon,** *s.* [Fr. *cinération*, from Lat. *cinis* (genit. *cineris*) = ashes.]

Old Chem. : The act or process of reducing to ashes, incineration.

çĭn-ĕ'-rē-ə, *s.* [Lat. fem. sing. of *cinereus* = ashy-grey.]

Anat. : The grey matter of the brain and spinal chord.

çĭn-ĕ'-rē-əl, *a.* [Eng., &c. *cinere(a)* ; *-al.*] Pertaining or consisting of cinerea (q.v.).

çĭn-ĕr'-ĕ-ŏŭs, *a.* [Lat. *cinereus*, from *cinis* (genit. *cineris*) = ashes.] Ash like, of the colour of ashes; ashy-grey.]

"The hair is red at the tips, *cinereous* beneath."—*Pennant.*

çĭn-ĕr-ĕ-ō-pĭ'-sē, *s.* [Lat. *cinereus* = as par. of *cinerare* = to turn to ashes.

Physical Sciences : Becoming grey according to a grey colour. (*R. Brown*, 1874.)

çĭn-ĕr-ĭ'-tĭous, *a.* [Lat. *cineritius*, *cinereus*, from *cinis* (genit. *cineris*) = ashes.] Having the form, state, quality, or colour of ashes.

"Broken and burnt rocks, ruins of buildings of *cineritious* earth."—*Boileau. Revelation examined with Candour*, ii. 224.

Cineritious substance of the nervous system

Anat. : A grey substance constituting with a white one the chief material of the nervous system. In the brain it is called also the cortical substance, while the white is denominated the medullary one. (Quain.)

* **çĭn-ĕr'-ŭ-lĕnt,** *a.* [Formed from Lat. *cinis* (genit. *cineris*) = ashes, on the analogy of *virulent*, &c.] Full of ashes. (*Bailey.*)

çĭn ĕ'-tĭ ca, *s. pl.* [Gr. *κινητικος* (*kinetikos*) = pertaining to motion, from *κινεω* (*kineō*) = to move.]

Med. : Diseases affecting the muscles and characterised by irregular action of the muscles, or muscular fibres, commonly terminated spasm. The third order in the class Neurotica of Good. Also agents that affect the voluntary or involuntary motions. (*Dunglison.*)

Çĭn-ghā-lē'-ŏe, *a.* & *s.* [Fr. *cingalais*.]

A. *As adj.* : Of or belonging to Ceylon.

B. *As subst.* : A native or inhabitant of Ceylon.

çĭn'-gle, *s.* [Lat. *cingulum*.] [Shortcake.]

1. A girdle worn by sailors. (*Smyth Sailor's Word-Book.*)

* **2.** A girth for a horse.

çĭn'-gŭ-lŭm, *s.* [Lat. = a girdle, from *cingo* = to gird, to surround.]

1. *Med.* : A cincture, a girdle. The part of the body situate below the ribs to which the girdle is applied; the waist. (*Dunglison.*)

2. *Zool.* : The neck of a tooth, or that constriction which separates the crown from the fang. The term is also used for the transverse series of long bands in the armour of the Armadillo, &c. (*Craig.*)

çĭn-ĭ-fĭŏn-ĭ-dæ, *s. pl.* [Lat. *cinifio* (gen. *cinifionis*), and fem. pl. suff. *-idæ.*]

Entom. : A family of Arachnida.

* **çĭn'-ĭ-fў,** * **çĭn'-ĕ-fў,** *v.t.* [Lat. *cinis* = ashes, and *facio* (pass. *fio*) = to make.] To reduce to ashes, to incinerate.

* **çĭnk,** *a.* [Cinque.]

çĭnk-foyle, *s.* [Cinque-foil.]

çĭn'-nə, *s.* [Gr. *κινω* (*kinō*) = to heat.]

Bot. : A genus of American grasses, allied to Agrostis; order, Gramineæ. So called from its heating qualities. (*Craig.*)

çĭn'-nə-bar, *s.* & *a.* [Fr. *cinabre*; Ital. *cinabro*, Sp. & Port. *cinabrio*; Ger. *zinnober*, from Lat.

cinnabaric, *a.* Gr. κιννάβαρις (*kinnabaris*), from Pers. *qulmer*; Hind. *shangarf*.]

A. *As substantive:*

I. Min.: A rhombohedral mineral, generally of adamantine lustre, though in friable varieties dull. Colours: cochineal red, brownish red, and lead grey, streak scarlet. A native mercuric sulphide, HgS. It has refraction and circular polarization. There are two varieties

(*i*) *Ordinary cinnabar*, crystallized, massive or earthy

(*ii*) *Hepatic cinnabar.* An impure cinnabar of a liver-brown colour and submetallic lustre. (Dana.) Cinnabar is found in Spain, in Austria, in China and Japan, in California, in Peru, &c.

2. Comm.: Red sulphuret of mercury used as a pigment; vermilion. It is prepared artificially by triturating mercury and sulphur together, and heating the black sulphide HgS until it sublimes

3. Bot. & Med.: The red resinous juice of a tree, *Calamus rotang*, a native of the East Indies, formerly called Dragon's blood, and used as an astringent.

B. *As adjective:*

1. Consisting more or less of the substance described under A

2. Bot. &c.: Coloured like it; scarlet with a slight mixture of orange.

cinnabar moth, *s.* *Callimorpha Jacobææ.*

cin-na-bar'-ic, *a.* [Eng. *cinnabar*; *-ic.*] Pertaining to, or consisting of, cinnabar; cinnabarine.

cin-na-bar'-ine, *a.* [Fr. *cinabrin.*] Pertaining to or containing cinnabar

cin-na-mate, *s.* [Eng. *cinnam(ic)*, and suff. *-ate* (*Chem.*) (q.v.).] [CINNAMIC ACID.]

cin-na-mein, *s.* [Eng. *cinnam(on)*, and suff. *-ein* (*Chem.*) (q.v.).]

Chem.: $C_6H_5C_2H_2C_6H_5O_2$. Benzyl cinnamate occurs in Peru and Tolu balsams, the produce of species of Myroxylon growing in South America. Also prepared by heating sodium cinnamate with benzyl chloride.

cin-na-mene, *s.* [Eng. *cinnam(on)*, and suff. *-ene* (*Chem.*).]

Chem.: C_8H_8 or $C_6H_5CH=CH_2$. Styrolene, styrol, cinnamol, ethenyl-benzene, phenylethylene. An aromatic hydrocarbon, obtained by distilling cinnamic acid with baryta, also by passing the vapour of xylene or a mixture of benzene vapour and ethene through a red-hot tube; also by distilling liquid storax and carbonate of sodium with water; synthetically by heating acetylene C_2H_2 in a glass tube over mercury to the softening point of the glass, four mols. of acetylene being condensed into one mol. of cinnamene. Cinnamene is a colourless oil, Sp. gr., 0·924. It boils at 145°. When heated to 300 in a sealed tube it is converted into a white transparent refractive solid called metacinnamene or metastyrolene, which when distilled yields liquid cinnamene. By the action of hydriodic acid cinnamene is chiefly converted into octane, C_8H_{18}. When cinnamene is agitated with a concentrated solution of iodine in potassium iodide, and the liquid ether diluted with water, crystals of iodide of cinnamene separate out. When cinnamene is oxidized with an alkaline solution of potassium permanganate, it yields benzoic and carbonic acids

cin-nam'-ic, *a.* [Eng. *cinnam(on)*, and suff. *-ic*, Of or pertaining to cinnamon; derived from cinnamon.

cinnamic acid, *s.*

Chem.: Phenyl acrylic acid. Cinnamomic acid, $C_9H_8O_2$ or C_6H_5-CH=CH-CO OH. A monatomic aromatic acid, obtained by the oxidation of cinnamon oil; it occurs in Peru and Tolu balsams. It unites directly with hypochlorous acid, HClO, forming C_6H_5-CHCl-CH(OH)-CO·OH, phenyl-chlorlactic acid. It can be extracted by boiling these resins with milk of lime and filtering while hot, and decomposing the calcium cinnamate with hydrochloric acid. It has been formed by heating benzoic aldehyde in close vessels with acetyl chloride. It forms small crystals, which melt at 120°, and boil at 290°. Fused with potash, it yields potassium salts of benzoic and acetic acids, with evolution of hydrogen. It is slightly soluble in water and soluble in alcohol. It forms salts called cinnamates

cinnamic aldehyde, *s.*

Chem.: C_9H_8O. An aromatic aldehyde, found in the volatile oils of cinnamon and cassia, which are obtained from the genus Cinnamomum, order Lauraceæ. The aldehyde is separated as a crystalline compound with acid potassium sulphite. It is a colourless oil, boiling at 246°, which readily oxidizes into cinnamic acid. When heated with nitric acid it yields benzoic acid and benzoyl hydride, $C_6H_5CO·H$. By the action of chromic acid it is converted into benzoic and acetic acids.

cin-na-mide, *s.* [Eng. *cinn(amon)*, or *cinnam(ic)*, and *amide.*]

Chem.: $C_9H_9O\,H_2N$. A white crystalline substance, melting at 141·5°. It is obtained by treating cinnamyl chloride with concentrated aqueous ammonia, washing with water, and recrystallizing from boiling water.

cin-na-mō'-dēn-drŭm, *s.* [Gr. κίνναμον (*kinnamon*), κιννάμωμον (*kinnámōmon*) = cinnamon, and δένδρον (*dendron*) = a tree.]

Bot.: A genus of plants, doubtfully referred by Lindley to the order Pittosporaceæ. *Cinnamodendron axillare*, a Brazilian tree, is aromatic. Its bark, which is a tonic and antiscorbutic, is prescribed in low fevers, and is made into gargles used when the tonsils are feeble.

cin-na-mō'-mic, *a.* [Eng. *cinnamon*; Lat. *cinnamomum*, and Eng. suff. *-ic.*] Pertaining to cinnamon, cinnamic.

cinnamomic acid, *s.* [CINNAMIC.]

cin-na-mō'-mŭm, *s.* [Gr. κιννάμωμον (*kinnámōmon*), κιναμωμον (*kinnamómon*) = cinnamon.]

1. Bot.: A genus of plants, order Lauraceæ. They have hermaphrodite flowers, with the abortive stamens apparently perfect with four-cavilled anthers. The leaves, which are three-ribbed, or triple-ribbed, are evergreen, often

CINNAMOMUM.

approaching each other in pairs. Another product of the genus Cinnamomum is Cassia-bark (q.v.). *Cinnamomum Culilawan* yields Culilawan bark. Cinnamon proper is from *Cinnamomum zeylanicum*. *C. nitidum* has similar properties, that of Santa Fe from *Nectandra cinnamomoides*, and that of the Isle of France from *Orestaphne cupularis*. All are of the Laurel order. [CINNAMON, CASSIA.]

2. Palæont.: Two species of Cinnamomum are said to exist in the Miocene.

cin'-na-mŏn, *s.* & *a.* [Gr. κίνναμον (*kinnamon*), κιναμωμον (*kinnamómon*); Lat. *cinnamomum*, *cinnamum*, from a Phœnic. word equivalent to Heb. קִנָּמוֹן (*qinnamon*), construct state קִנְּמוֹן (*qinnemon*).]

A. *As subst.:* An aromatic substance consisting of the bark of a tree or trees. [CINNAMOMUM, CINNAMON BARK.] The Pharmacians, the Arabs, or both, imported the genuine cinnamon into Palestine remotely from Ceylon or the Eastern Archipelago, but probably from some mercantile port much nearer at hand. It is represented, however, as growing in at least one Jewish garden (Song of Solomon, iv. 14), unless, indeed, the whole description be figurative. It was one of the ingredients in the holy anointing oil, which Moses was commanded to make for the anointing of the tabernacle and its furniture (Exod. xxx. 22–29). It was used also for the perfume of beds (Prov. vii. 17). It is mentioned as an article of merchandise also in the mystic Babylon (Rev. xviii 13).

Wild cinnamon: The genus Cinnamodendron (q.v.).

B. *As adj.:* Bright brown, mixed with yellow and red

cinnamon bark, *s.*

Pharm.: Cinnamomi Cortex. The inner bark of shoots from the truncated stocks of *Cinnamomum zeylanicum*, order Lauraceæ. It is imported from Ceylon. It occurs in closely rolled, brittle, bright-brown quills having an aromatic odour and warm astringent taste. It is used to prepare *Aqua cinnamomi*, *Tinctura cinnamomi*, and *Pulvis cinnamomi compositus*, compound cinnamon powder. Cinnamon is a stimulant, aromatic, carminative, and is useful in cases of diarrhœa.

cinnamon oil, *s.*

Pharm.: Cinnamomi oleum. An essential oil distilled from cinnamon bark. It is of a bright yellow colour, which gradually darkens. It consists chiefly of cinnamic aldehyde (q.v.). When exposed to the air, it gradually absorbs oxygen and forms a resin and cinnamic acid.

cinnamon root, cinnamon rushi, *s.*

Bot.: The trade-name given by Gerard to *Inula Conyza*.

cinnamon sedge, *s.*

Bot.: An endogenous plant, *Acorus calamus.*

cinnamon-stone, *s.*

Min.: A mineral of cinnamon-red colour, a variety of garnet. The finest specimens are brought from Ceylon. Dana considers it a sub-variety of Garnet, ranking it under his Lime alumina Garnet, or Grossularite (q.v.).

cinnamon water, *s.* *Aqua cinnamomi*, a medicinal drink prepared by distilling twenty ounces of cinnamon with two gallons of water till one gallon boils over.

cin-na-mŏn-i-trile, *s.* [Eng. *cinnamon(a)*, and *nitril.*]

Chem.: C_9H_7N. A substance, boiling at at 255°, soluble in alcohol. It is obtained by the action of PCl_5 on cinnamic

cin-na-myl, cin-na-myle, *s.* [Eng. *cinnamon*; Gr. κίνναμον (*kinnamon*) = cinnamon, and ὕλη (*hulē*) = . . . matter.]

Chem.: C_9H_7O. An aromatic monatomic radical

cinnamyl chloride, *s.*

Chem.: C_9H_7OCl. Obtained by the action of pentachloride of phosphorus, PCl_5, on cinnamic acid. It is a heavy oil, boiling at 204°. Heated with cinnamate of sodium, it yields cinnamic anhydride

cinnamyl hydride, *s.*

Chem.: $C_9H_7O·H$. [CINNAMIC ALDEHYDE.]

cin-nyl, *s.* & *a.* [Gr. κίνναμον (*kinnamon*), and ὕλη (*hulē*) = matter as a principle of being.]

Chem.: C_9H_7. A monatomic aromatic hydrocarbon radical.

cinnyl cinnamate, *s.*

Chem.: Styracin, $C_9H_7O\cdot C_9H_7O_2$. It is contained in liquid storax, which exudes from *Styrax calamita*, a shrub growing in Asia Minor. Distilled with potash it yields cinnyl alcohol and cinnamic acid.

cin-nyl'-ic, *a.* [Eng. *cinnyl*; *-ic.*] Pertaining to, or derived from cinnyl (q.v.).

cinnylic alcohol, *s.*

Chem.: $C_9H_9O·H$. Cinnyl hydrate, cinnamic alcohol, styryl alcohol, styrone. A monatomic aromatic alcohol, obtained by heating cinnyl cinnamate with caustic alkalies. It crystallizes in soft silky needles, melts at 35°, and is soluble in water. By oxidizing agents it is converted into cinnamic aldehyde and cinnamic acid.

cin-nyr'-id, *s.* [CINNYRIDÆ.] Any bird of the family Cinnyridæ.

cin-nyr'-i-dæ, *s. pl.* [Lat. *cinnyris*, the type, and fem. pl. adj. suff. *-idæ.*]

Ornith.: A lapsed synonym of Nectariniidæ (q.v.), containing the Sun-birds.

A. *As substantive:*

1. *Ord. Lang.:* The number five; a group of five treated as one.

2. *Music* (*Pl. cinques*): The name given by change-ringers to changes on eleven bells, probably from the fact that five pairs of bells change places in order of ringing in each successive change. (*Grove's Dict. Music*

¶ * *Cinque and quater:* One who has passed his fiftieth year.

"Take pity, brothes
Upon a poor old *Cinque and Quater.*"
Cotton: Burlesque upon Burlesque, p. 173.

* *To set all on cinque and sice:* A phrase probably = to be fearless or desperate.

"[Mantilla] for their carelessness of life, setting all at *cinque and sice.*"—*Br. Guise*, in *English Garner*, iii. 228.

B. *As adj.:* The fifth.

cinque-cento, *s.* & *a.* [Ital.]

A. *As substantive:*

Arch.: Literally 500, but used as a contraction for 1,500, the century in which the revival of ancient architecture took place in Italy. The term is applied to distinguish the style of architecture which then arose in that country. In France the style, as introduced there, is called *Style Francois premier* and *Renaissance*; and in England, the Revival and Elizabethan. (*Gwilt.*)

B. *As adj.:* Pertaining to or constructed in the style described in A.

"What is given the student as most to Raphael's work? *Cinque-cento* ornament generally."—*Ruskin.*

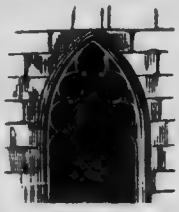
cinque-foil, * **cynk-foly,** *s.* [O. Fr. *cinque* = five, and *foil*; Pr. *fuilla*; Lat. *folium* = leaf.]

1. *Botany:*

(1) The common name of plants of the genus Potentilla, order Rosaceæ, also called Five-finger, from the resemblance of its leaves to the fingers of the hand.

(2) *Onobrachis sativa.* (*Aubrey, Wilts.*)

2. *Arch.:* An ornament used in the Middle Pointed style of architecture. It consists of five cuspidated divisions or carved pendants inscribed in a pointed arch, or in a circular ring, applied to windows and panels. The cinque-foil, when inscribed in a circle, forms a rosette of five equal leaves, having an open space in the middle, the leaves being formed by the open spaces, bounded by the solids or cusps.



CINQUE-FOIL.

3. *Her.:* This plant, as a charge, answers to the five senses of man, and denotes that the bearer conquers his affections and appetites. (*Crabb.*)

¶ *March cinque-foil:* A modern book-name for a plant, *Comarum palustre.*

† **cinque-foiled,** *a.* [Eng. *cinque-foil*; *-ed.*]

Arch.: Furnished with cinque-foils.

* **cinque-outposts,** *s. pl.* The five senses.

"I was fallen soundly asleep: the *cinque-outposts* were shut up closer than usual."—*A Wit's or Breeme*, 1,668 (*Hark. Misc.*, vii 203). (Davies.)

cinque-pace, *s.* A kind of dance (called also *Galliard*), the steps of which were regulated by the number five. Also translated *five-paces.* Sir John Davies thus describes it—

"Five was the number of the music's feet,
Which still the dance did with *five paces* meet."

cinque-port, * **sink-pors,** *s.*

1. (Of the form *cinque-port*): A kind of fishing-net having five entrances.

2. (*Pl.*): Ports, as the latter half of the designation implies, "five" in number, and deemed the five most important ports on the Southern Coast facing France. At first there were really only five, viz., Dover, Sandwich, Romney, Hastings, and Hythe. Two have since been added, viz., Winchelsea and Rye, and the "Cinque"-ports at present number seven. Formerly the king's ordinary writ did not run within them, but legal cases arising were tried, at least in the first instance, in the local courts. There lay an appeal from them to the Lord Warden in his court of Shepway, and thence again to the King's Bench. (*Blackstone: Comment.*, bk. iii., ch. 6.) They have a Lord Warden, but his power is now abridged, the 18 & 19 Vict. c. 48, altered by the 20 & 21 Vict. c. 1, and other acts, having swept the old jurisdiction away. (*Wharton.*)

"The *sink-pors* scarseliche midelnpes eightetene."—*Robert of Gloucester.*

* 3. A representative of one of the Cinque-ports named in 2.

"A canopy borne by four of the *Cinque-ports*; under it, the queen in her robes . . ."—*Shakesp.: Henry VIII.*, iv. 1.

* **cinque-ports,** * **cinq-ports,** *s. pl.* The same as *Cinque-outposts* (q.v.).

"My *cinq-ports* (my five outward senses) had been trebly look'd up."—*Howell: Parly of Beasts*, p. 23.

* **cinque-spotted,** *a.* Having five spots.

"A mole *cinque-spotted*, . . ."
Shakesp.: Cymbeline, ii. 2.

çin'-tre, *s.* [Fr.]

Arch.: Centre or centering (q.v.).

* **çī'-ŏn** (1), *s.* [Scion.]

çī-ŏn (2), *s.* [Gr. κίων (*kiōn*) = a column, the uvula.]

Anat.: The uvula. (*Dunglison.*)

çī-ŏn-ĭs'-tĕç, *s.* [Gr. κιονίσκος (*kionískos*) = a small pillar.] A genus of Hydroid Polypes belonging to the family Podocorynidæ.

çī-ŏ-nī'-tĭs, *s.* [Eng., &c. *çion* (2); *-itis.*]

Pathol.: Inflammation of the uvula.

çī-ŏn'-ŏ-tōme, *s.* [Gr. κίων (*kiōn*), genit. κίονος (*kionos*) = the uvula; and τόμη (*tomē*) = a cutting.]

Surg.: An instrument for excising a portion of the uvula. (*Knight.*)

çī'-ŏn-ŭs, *s.* [Gr. κίων (*kiōn*) = a pillar.]

Entom.: A genus of Coleopterous insects, tribe Rhyncophora, family Curculionidæ. They have a long curved rostrum inserted in a groove beneath the thorax, which is small. The elytra are nearly spherical, furnished with velvetty tufts. Seven British species are known. *Cionus scrbasci*, of a deep ash colour with other parts buff, grey, or yellow, is nearly globular. It is found on Scrophularia, Verbascum, and other plants.

* **çī'-pər** (1), * **çi-pre,** * **çi-pur,** * **çy-pyr,** *s.* [O. Fr. *cypres.*] [Cypress.] A cypress

"A *cipur* by the churche seat abydeth."
Stanihurst: Æneid, ii. 760

* **çī'-pər** (2), *s.* [Probably a corruption of *cipher* (q.v.).] Anything of little value, a sham.

çiper-tunnel, *s.* A false chimney, placed on a house for ornament or uniformity. (*Knight.*)

çī'-phər, * **si-fer, çy-pher,** *s.* [O. Fr. *cifre*; Fr. *chiffre*, from Low Lat. *cifra* = nothing, from Arab. *sifr* = a cipher (*Skeat*); Sp. & Port. *cifra*; Ital. *cifra*, *cifera*; Ger. *ziffer.*]

A. *Ordinary Language:*

I. *Literally:*

1. In the same sense as B. 1

* 2. A character of any kind used in writing or in printing.

* 3. (*In pl.*): Shorthand.

"His speeche . . . were much heeded, and taken by divers in *ciphers*."—*Bachus' Life of Williams*, I. 62.

II. *Figuratively:*

1. A person of no worth or moment.

"If the people be somewhat in the election, you cannot make them nulls or *ciphers* in the privation or translation."—*Bacon.*

* 2. Worthlessness, sham, unreality.

"Mine were the very *cipher* of a function."
Shakesp.: Measure for Measure, ii. 2.

B. *Technically:*

1. *Math.:* A mark or character (0) which of itself possesses no value, but when placed after any number increases its value tenfold. In decimal fractions the placing of a cipher before a number decreases its value in the same proportion.

"The *cipher* of itself implies a privation of value; but when dispersed with other characters on the left of it, in the common arithmetick, it serves to account each of their values by ten: and in decimal arithmetick, to lessen the value of each figure to the right of it, in the same proportion."—*Chambers.*

2. *Engraving:* A combination or interweaving of two or more letters, especially the initials of a name; a monogram.

3. *Corresp.:* A secret or occult code or alphabet used in carrying on correspondence between two parties when it is important that the contents should be unintelligible to any third person into whose hands it might accidentally come, and who did not possess the key.

"This paper was signed in *cipher* by the seven chiefs of the conspiracy . . ."—*Macaulay: Hist. Eng.*, ch. ii.

* 4. *Astrol.:* An occult sign or figure.

"With that he circles draws, and square,
With *ciphers*, astral characters . . ."
Butler: Hudibras, II. ii.

5. *Music:* The sounding of a note on an organ or wind instrument, by an escape of wind through it, without that note having been touched by the player.

cipher-key, *s.* A key which enables the holder to read writings in cipher.

çī'-phĕr, *v.i.* & *t.* [Cipher, *s.*]

A. *Intransitive:*

1. *Ord. Lang.:* To practise arithmetic; to work out sums.

"We have long drawn our supply of roofing-slate from such quarries; school boys *ciphered* on them slates, . . ."—*Tyndall: Frag. of Science* (3rd. ed.), xiv. 409.

2. *Music:* Used of an organ or harmonium, when through some defect the wind escapes and sounds through any note without that note having been touched by the player

B. *Transitive:*

1. *Lit.:* To write in cipher or secret characters.

2. *Figuratively:*

(1) To designate, to characterize, to depict.

"The face of either *ciphered* either's heart."
Shakesp.: Rape of Lucrece, 1,338.

(2) To decipher, to interpret.

"To *cipher* what is writ in learned books."
Shakesp.: Rape of Lucrece, 681.

* **çī'-phĕr-hood,** *s.* [Eng. *cipher*; *-hood.*] The quality or state of being only a cipher; nothingness.

"Therefore God to confute him, and bring him to his native *cipherhood* threatened to bring a word against him."—*Godwin: Works*, vol. v., fol. 62. (Davies.)

çī'-phĕr-ĭng, *pr. par., a., & s.* [Cipher, *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As substantive:*

1. Elementary arithmetic; the act or science of doing sums.

2. The act or art of writing in cipher

çĭp'-ŏ-lin, çī'-pō-line, çī-pō-lī-nō, *s.* [Ital. *cipollino* = a small onion; Lat. *cepulla* = a small onion, a chive, dimin. of *cepa* = an onion.]

Min.: An Italian marble, a variety of calcite, containing a slight admixture of quartz and oxide of iron. Its colour is white with pale greenish shadings, and is so called because its veins, like those of onions, consist of different strata, one lying upon another. It does not stand the weather well.

CIPPUS.

"A great magician
Obscured in the *circle* of the forest."—*Shakesp. As You Like It*, v. 4.

7. A district, a territory.

¶ * *Circles of the Holy Roman Empire:* Such provinces and principalities as had a right to be present at the diets. They were ten in number

8. A number of persons standing or seated in a ring.

"... announced to the splendid *circle* assembled round the font ..."—*Mer calay: Hist. Eng.*, ch. xiv.

9. An assembly generally.

10. Any series ending as it begins, and perpetually repeated; a cycle, a succession.

"There be fruit trees in hot countries, which have blossoms and young fruit, and young fruit and ripe fruit, almost all the year, succeeding one another; but this *circle* of ripening cannot be but in abundant plants and hot countries."—*Bacon.*

II. *Figuratively:*

1. A sphere of acquaintance; a class or division of society.

"In private society he [Mr Canning] was amiable and attractive, though, except for a very few years of his early youth, he rarely frequented the *circles* of fashion, . . ."—*Brougham.*

* 2. Circumlocution; indirectness of language.

"Has he given the lye
In *circle*, or oblique, or semicircle
Fletcher: Queen of Corinth.

B. *Technically:*

1. *Geometry:*

(1) A plane figure defined by a curved line called its circumference, every point in which is equally distant from a certain point within the circle, called its centre. [CENTRE.] A straight line drawn from the centre of a circle to its circumference is called a radius, and a straight line drawn through the centre and terminated both ways by the circumference is called the diameter of a circle. The space enclosed within the circumference is called the area of the circle. The circumference of a circle is to its diameter as about 3·14159 to 1. For the quadrature of the circle see QUADRATURE.

* (2) The curved line defining such figure; the circumference.

2. *Logic:* An inconclusive and deceptive line of argument, in which two or more statements are brought forward to prove each other, i.e., the first proposition is assumed as proved by that which follows it, and the second again is assumed from that which precedes it.

3. *Astron.:* An instrument of observation, the limb of which is graduated to 360° and forms a complete circle. There are several kinds: a *mural circle*, one affixed to a wall; a *transit circle*, one fitted with a telescope on an axis, and mounted in the plane of the meridian; a *reflecting circle*, one working by reflection, as a sextant; a *repeating circle*, one repeating the angle several times continuously along the limb. (See these words, and also ALTITUDE, AZIMUTH, CIRCUMFERENTOR.)

4. *Archæol.:* The name given to one of the megalithic remains, as at Stonehenge, Avebury, and other places. (*Gwilt.*)

5. *Vehicles:* The fifth wheel of a carriage.

¶ (1) *Circle of altitude:*

Astron.: A circle parallel to the horizon, having its pole in the zenith.

(2) *Circle of curvature:* That circle the curvature of which is equal to that of any curve at a certain point. Called also the *Circle of equi curvature.*

(3) *Circles of declination:* Great circles intersecting each other in the poles of the world.

(4) *Circles of excursion:* Circles parallel to the ecliptic, and at such a distance from it (usually 10°), as that the excursions of the planets towards the poles of the ecliptic may be within them.

(5) *Circle of illumination:* A circle passing through the centre of a planet perpendicular to a line drawn from the sun to the respective body. This is supposed to separate the illumined part from the unillumined, which it does nearly.

(6) *Circles of latitude:*

(*a*) *Astron.:* A great circle perpendicular to the plane of the ecliptic, passing through its poles.

(*b*) *Spherical projection:* A small circle of the sphere whose plane is perpendicular to the axis.

(7) *Circles of longitude:* Lesser circles parallel to the ecliptic, diminishing as they recede from it.

(8) *Circle of perpetual apparition:* One of the lesser circles parallel to the equator, described by any point of the sphere touching the northern point of the horizon, and carried

about with the diurnal motion. All the stars within this circle never set.

(9) *Circle of perpetual occultation:* A lesser circle parallel to the equator, and containing all those stars which never appear in our hemisphere. The stars situated between the circles of perpetual apparition and perpetual occultation alternately rise and set at certain times.

(10) *Circle of the sphere:* A circle upon the surface of the sphere, called a great circle when its plane passes through the centre of the sphere; in all other cases a small circle.

A *great circle* of a sphere is one whose centre coincides with that of the sphere, and which therefore divides the sphere into two equal parts.

(11) *Circle of Willis:* An anastomosis between the primary trunks of the arteries of the brain, to equalize and carry on the circulation of blood in the brain when an obstruction to one of the main trunks occurs. It encloses a space somewhat of an oval figure, within which are found the optic nerves, the tuber cinereum, the infundibulum, the corpora mammillaria, and the interpeduncular space. (*Todd & Bowman: Physiol. Anat.*, vol. i., ch. 10, p. 294.)

(12) *Astronomical Circle:*

Astron. Instrum.: The name given to any one of the instruments designed to be used for measuring angles of altitude or zenith distance. [MURAL CIRCLE, TRANSIT CIRCLE, ALTITUDE, and AZIMUTH INSTRUMENT.]

(13) *Diurnal Circles:* Supposed to be described by the several stars and other points in the heavens in their apparent diurnal rotation round the earth.

(14) *Horary Circles* (*Dialling*): The lines on dials which show the hours.

(15) *Polar Circles:* Immovable circles, parallel to the equator, and at a distance from the poles equal to the greatest declination of the ecliptic.

(16) *Reflecting Circle:* [SEXTANT.]

(17) *Repeating Circle:* [REPEATING.]

(18) *Transit Circle:* [TRANSIT.]

¶ Crabb brings into comparison the words a *circle*, a *sphere*, an *orb*, and a *globe*. Without adverting further to his views, it may be simply added that a *circle*, mathematically viewed, is a plane figure; while a *sphere*, an *orb*, and a *globe* are solids. It is, we think, from arbitrary usage and not for a deeper reason that we speak of the *circle* of one's friends, and the *sphere* of one's activity.

circle-iron, *s.*

1. A hollow punch for cutting planchets, wads, wafers, and circular blanks.

2. The fifth wheel of a carriage; the iron circle between the fore-axle and the body.

*** circle-learning,** *s.* An encyclopædia. (*Trench: English Past and Present*, p. 81.)

circular instruments, *s. pl.* Astronomical, nautical, or surveying instruments, which are graduated to 360°, that is, around the whole circle. (*Knight.*)

circular iron-clad, *s.*

Naut.: An iron-clad war vessel of circular form. The original suggestion of such a type of vessel was made by Mr. E. J. Reed, formerly constructor of the British navy, but the first actually built was by direction of the Russian Admiral, Popoff, and it was called in consequence a Popoffka.

circular-letter, *s.*

1. *Banking*: A letter of credit addressed to several bankers in other countries in favour of a certain person named therein.

"It never was known that *circular letters*,
By humble companions were sent to their betters."
Swift to Sheridan.

2. *Comm. & Diplomacy*: A circular.

circular lines, *s. pl.*

Math.: Lines of sines, tangents, secants, &c.

circular-loom, *s.* A loom in which a shuttle moves in a circular race, and continuously in one direction, through warps arranged in a circle. (*Knight.*)

circular-micrometer, *s.* An annular form of the micrometer first suggested by Boscovich in 1740, and afterwards revived by Olbers in 1798. (*Knight.*)

circular muscle or **circular fibres** (of Santorini).

Anat.: A series of circular involuntary muscular fibres wholly surrounding the membranous portion of the urethra.

circular-note, *s.* The same as *Circular-letter* (q. v.).

circular numbers, *s. pl.*

Arith.: Those numbers all the powers of which terminate in the same digits as the numbers themselves. Thus all the powers of 5 terminate in 5.

circular parts, *s. pl.* Five parts of a right-angled or a quadrantal spherical triangle; they are the legs, the complement of the hypothenuse, and the complements of the two oblique angles. (*Craig.*)

circular polarization, *s.*

Phys.: In the undulatory theory of light a supposed circular rotation of the particles of ether in certain media, when a pencil of plane polarised light is allowed to pass through these media. (*Craig.*)

circular roofs, *s. pl.*

Arch.: Such as have the horizontal sections circular.

circular-sailing, *s.*

Naut.: The act or system of sailing on the arc of a great circle.

circular-saw, *s.* [Saw.]

circular-shears, *s.* A shears for sheet-metal, consisting of two circular blades on parallel pins. (*Knight.*)

circular-shuttle box-loom, *s.* A loom having a box with a number of shuttles, and having means for actuating it so as to bring any one of the shuttles into operation as required by the pattern. (*Knight.*)

circular sinus, *s.*

Anat.: A ring like sinus placed superficially round the pituitary body in the dura mater of the brain, forming a communication between the two cavernous sinuses. It is also called a Coronary sinus.

circular or **cylindre-cylindric work,** *s.*

Arch.: A term applied to any work which is formed by the intersection of two cylinders whose axes are not in the same direction. The line formed by the intersection of the surfaces is termed, by mathematicians, a line of double curvature. (*Gwilt.*)

çir-cu-lar'-i-ty, *s.* [Low Lat. *circularitas*, from *circularis* = round, from *circulus* = a circle.]

I. *Ordinary Language:*

1. The quality or state of being circular.

* **2.** That which is circular.

"The heavens have no diversity or difference, but a simplicity of parts, and equiformity in motion, continually succeeding each other; so that, from what point soever we compute, the account will be common unto the whole *circularity*."—*Brown.*

* II. *Logic*: Reasoning in a circle; incomplete or inconclusive reasoning.

çir'-ū-lar-ly, *adv.* [Eng. *circular*; *-ly.*]

1. In form of a circle.

2. With a circular or revolving motion.

3. By circular reasoning; indirectly, in a circle.

"To argue *circularly*."—*Baxter: Inf. Bapt.*, p. 88.

***çir'-ū-lar-nēss,** *s.* [Eng. *circular*; *-ness.*] The quality of being circular, roundness, circularity

"In forme . . . it doth pretend to some *circularness*."—*Fuller: Worthies; Warwick*, ii. 493.

***çir'-ū-lar-y,** *a.* [Eng. *circular*; *-y.*] Circular, ending in itself, inconclusive.

"Which rule must serve for the better understanding of that, which Damascene hath, touching cross, and *circulary* speeches, wherein there are attributed to God such things as belong to manhood, and to man such as properly concern the duty of Christ Jesus."—*Hooker: Eccl. Pol.*, v., § 55.

çir'-ū-lāte, *v.i.* & *t.* [Lat. *circulatus*, pa. par. of *circulo* = to move in a circle.]

A. *Intransitive:*

I. *Ordinary Language:*

* **1.** *Lit.*: To move in a circle, to revolve, to move round and return to the same point.

2. *Fig.*: To be spread about, to move from place to place, or from person to person, or from hand to hand.

"As the mints of calumny are perpetually at work, a great number of curious inventions, issued out from time to time, grow current among the party, and *circulate* through the whole kingdom."—*Addison.*

II. *Technically:*

1. *Metal.*: To chase, to beat out.

2. *Anat.*: To traverse the arteries and veins of the body. [Circulation.]

B. *Transitive:*

I. *Ordinary Language:*

1. *Literally:*

(1) To cause to move from place to place, to put into circulation.

"In the Civil War the money spent on both sides was *circulated* at home."—*Swift.*

* (2) To travel or move round.

"May I not conclude for certain that this man hath been in the moon, where his head hath been intoxicated with *circulating* the earth."—*Bishop Croft.* 1668.

2. *Fig.*: To spread abroad, to disseminate.

"This pointed sentence was fast *circulated* through town and country, and was soon the watchword of the whole Tory party."—*Macaulay: Hist. Eng.*, ch. iv.

* II. *Metal.*: To beat out, to chase.

¶ For the difference between *to circulate* and *to spread*, see Spread, *v.*

† **çir'-ū-lāte,** *s.* [Circulate, *v.*]

Arith.: A circulating decimal is sometimes so called. (*Buchanan.*)

çir'-ū-lā-ting, *pr. par.*, *a.*, & *s.* [Circulate, *v.*]

A. *As pr. par.*: (See the verb).

B. *As adjective:*

1. *Ord. Lang.*: Moving in a circle, returning to itself, revolving.

2. *Finance*: Current, passing from hand to hand, constituting currency.

C. *As subst.*: The act of passing or the state of being passed from hand to hand or from person to person; circulation.

circulating-decimal, *s.* A decimal which cannot be expressed with perfect exactness in figures, and when to approximate to accuracy the decimal is taken to many places, it is found that the same series of figures is repeated again and again *ad infinitum*. The figures thus repeated are called the period of the circulating decimal. Thus ⅔ of 1 = ·222222, &c. of which the period is 2, and ⅐ of 1 = ·142857142857142857, &c., of which the period is 142857.

"A *circulating* decimal that goes on repeating itself for ever."—*Times*, Sept. 5, 1868.

circulating library, *s.* A library, the books contained in which are circulated by loan amongst the subscribers. The first established in England was at Salisbury by Samuel Fancourt, a dissenting minister, but it was not successful. The first in London was in 1748. The Astor Library in New York, the Boston Public Library, and the Philadelphia and Mercantile Libraries in Philadelphia, are among the largest in this country.

circulating medium, *s.* The medium of exchanges or of sale and purchase, whether it be gold, silver, paper, or any other article. The term, which is used by all economical writers as synonymous with currency, came into common use in the last decade of the eighteenth century. [MEDIUM.]

"*Circulating medium* is more comprehensive than the term money, as it is the method of exchanges, or purchases, and sales, whether it be gold or silver coin, or any other article."—*Wharton: Law Lexicon.*

circulating-pump, *s.* The cold-water pump, by which condensation water is drawn from the sea, river, or well, and driven through the casing of a surface condenser. (*Knight.*)

çir-ŭ-lā'-tion, *s.* [Fr. *circulation*; Lat. *circulatio*, from *circulatus*, pa. par. of *circulo* = to move in a circle; *circulus* = a circle.]

A. *Ordinary Language:*

I. *Literally:*

1. Motion in a circle, or in such a course that the moving body returns to the place whence it started; especially used of the circulation of the blood. [B. 1 (2).]

2. The act or process of spreading or causing to pass from hand to hand or from person to person. [B. 3.]

3. The state of being circulated or passed from person to person or from hand to hand. [B. 3.]

4. The extent to which anything is circulated.

"To increase the *circulation* of money, at least in banknotes."—*Sir. Burnet.*

II. *Figuratively:*

* **1.** A series, a succession.

"... thou seest fit to deny us the blessing of peace and to keep us in a *circulation* of miseries."—*King Charles.*

* **2.** A reciprocal interchange of meaning.

"The true doctrine of astronomy appear to have had some popular *circulation*."—*Whewell.*

3. The act or process of disseminating or spreading abroad.

B. *Technically:*

1. *Anat., Animal Physiol., &c.:* A movement of the blood throughout the human body. (For details see (2).)

(1) *Hist.:* The Spanish physician and theologian, Michael Servetus, whose end was so tragic, gained in 1553 some glimmering perception of the lesser or pulmonary circulation of the blood. Cæsalpinus in 1569 made a further advance towards the truth, but it was reserved for the immortal Harvey actually to make the great discovery, which he approached in 1615 and published with many details in 1628.

(2) *Physiol.:* The propelling force in the circulation of the blood is that of the heart, which is a hollow muscular organ placed in the centre of the sanguiferous system. The blood is driven by the heart into the aorta, and then circulated through the body by a set of vessels called arteries, which ramify into smaller and smaller tubes. [ARTERIES.] On reaching the extremities of the arteries it is driven through excessively fine tubes called, from their hair like tenuity, capillaries. These, constituting the connecting channels between the arteries and the veins, afford it a passage into the latter vessels, by which it is conducted back to the heart. The heart is divided internally into four cavities, two at its base called auricles, and two at its body and apex called ventricles. The right is the venous side of the heart; it receives into its auricle the venous blood from every part of the body by the superior and inferior vena cava and coronary vein. In passing from the arteries to the veins the blood has lost its red color and assumed a dark hue; it is therefore discharged by the right auricle into the right ventricle, and thence transmitted along the pulmonary artery and its branches to the capillaries of the lungs, to be again brought in contact with the oxygen of the air. Returning to the left auricle it is immediately discharged into the left ventricle, thence to the aorta, to be propelled through the body as before. The current of the blood through the body in general is called the *greater* or *systemic circulation*; that to and from the lungs the *lesser* or *pulmonary* circulation. (*Quain, &c.*) There is a circulation either of blood or of a fluid analogous to it in the inferior animals. For an example see that under No. 2.

2. *Veg. Physiol.:* The circulation of plants is not closely analogous to that in animals. Formerly it was believed that there was an ascending current of sap in spring, and a descending one in autumn. It is now found that both an ascending and a descending current coexist, and when need arises these are supplemented by horizontal currents passing between the tissues. The ascending current enters the leaves, where it is submitted to certain influences which fit it for the nutrition of the plant. The descending carries it thence in an elaborated condition back to the root. (*Thome, Brown, &c.*) [CYCLOSIS, ROTATION, &c.]

"The nutrient fluid however formed, is distributed throughout the textures of the plant, or animal, by vital or physical forces, or by the junction of both; and the function, by which this is effected, is called *Circulation*. In plants this function is very simple and is formed without the agency of a propelling organ; but in the greatest number of animals, such an organ, 'a heart,' is the main instrument in the distribution of the blood. In animals then there is a true *circulation*, the fluid setting out from and returning to the same place. But in plants, the fluid is found to circulate or rotate, within the interior of cells, as in Chara and Vallisneria, the fluid of the cell not communicating with that of the adjacent ones; or to pass up from the spongioles in an ascending current and to descend in another set of vessels. But in many simple animals some entirely for example, and probably others, there is no good evidence of the existence of any *circulation* at all, their textures imbibing the fluid in which they live."—*Todd & Bowman: Physiol. Anat.*, vol. i., introd., pp. 23, 24.

3. *Finance:* Currency, circulating coin, notes, &c. In its early stages commerce was carried on by a direct exchange of articles which were reciprocally wanted, and in this form it is usually called "barter" or sometimes "exchange." An intermediate merchandise was then introduced called "money," and transactions in which money is used are not called "barter" but "sales." . . . A transaction in which any commodity or service is exchanged for money, instead of an equivalent, has been well called by J. B. Say a *demi-exchange*. And the conveniences of this method of conducting commerce so greatly preponderate over those of direct exchange or barter, that commerce is now almost entirely resolved into these demi-exchanges or sales. And this is the proper meaning of the word *circulation*. Barter or exchange is where two services of any kind are exchanged directly. Sale or demi-exchange, or *circulation* is when any service is exchanged for some intermediate merchandise, which will enable its owner to obtain some service in exchange for it at some future time. (*Macleod: Dict. of Pol. Econ.*)

"The weekly issue increased to sixty thousand pounds, to eighty thousand, to a hundred thousand, and at length to a hundred and twenty thousand. Yet even this issue, though great, not only beyond precedent, but beyond hope, was scarcely often sufficient with the demands of the nation. Nor did all the newly-stamped silver pass into *circulation*."—*Macaulay: Hist. Eng.*, ch. xxi.

¶ *Circulation of a newspaper, journal, or magazine:* The number of copies of each issue printed and sold.

çir'-ŭ-lā-tive, *a.* [Formed by analogy from Lat. *circulatus*, pa. par. of *circulo*.] Circulating; causing or contributing to cause circulation.

"The movements impressed upon it by the *circulative* powers."—*Todd & Bowman: Physiol. Anat.*, vol. i., ch. iii., p. 76.

Circulative animals:

Zool.: The name given by Oken to the Mollusca.

çir'-ŭ-lā-tŏr, *s.* [Lat. *circulator* = a mountebank, a charlatan.]

I. *Ordinary Language:*

1. *Lit.:* One who circulates or puts in circulation.

* **2.** *Figuratively:*

(1) A mountebank, a juggler, a jester.

"A race of *Circulators*, Tumblers and Tayters in the Church."—*Gauden: Tears of the Church*, p. 286.

(2) A cheat, an impostor. (*Gaule: Magastro-mancer.*)

(3) One who or that which circulates or causes circulation.

II. *Math.:* A circulating decimal.

çir-ŭ-lā-tŏr'-I-oŭs, *a.* [Lat. *circulatorius*, from *circulator* = to go in a circle. Travelling from house to house or from town to town; itinerant.

"Jesus did never make use of such unwarrantable methods or instruments, as magical charms, circulatory nature, *circulatorious* jugglers, and such contrivances the devil, or self-seeking impostors are wont to use."—*Barrow: Serm.*, ii. 20.

* **çir'-ŭ-lā-tŏr-y,** *a.* & *s.* [Fr. *circulatoire* from Lat. *circulatorius* = pertaining to jugglers, mountebanks, &c.]

A. *As adjective:*

I. *Ordinary Language:*

1. Circular; circulating, as a circular letter.

2. Like a mountebank or quack; wandering circulatorious.

"Bordo's *circulatory* prognostications in the quality of a quack doctor."—*Warton: Hist. Eng. Poetry.*

I. *Physiol.:* Producing or pertaining to the circulation of the blood.

"The *circulatory* system is far less complex."—*Woodward: Mollusca*, ed. Tate (1876), p. 264.

B. *As substantive:*

Physics: A vessel in which the steam which rises from another vessel on the fire is collected, and having been cooled in another vessel attached to the upper portion, is returned to the first vessel.

* **çir'-ŭle,** *v.i.* [CIRCLE, *s.*] To move or run in a circle; to revolve.

"To each point of itself so far as it *circuleth*."—*H. More: Song of the Soul*, bk. iii., c. 1

* **çir'-ŭle,** *s.* [CIRCLE, *s.*]

* **çir'-ŭ-let,** *s.* [CIRCLET.]

Church History:

1. The name given to a sect of the Donatists in Africa during the fourth century, from their habit of roving from house to house plundering. They went about in predatory gangs, consisting chiefly of rustics, pretending to reform public manners and redress grievances. They manumitted slaves without the consent of their masters, forgave debts, &c. In their zeal for martyrdom they courted death by insulting the Pagans at their festivals, and destroyed themselves in various ways

2. Vagabond monks, censured by Cassian under the name of Sarabaitæ for roving from place to place. Probably the name was transferred to them from the Donatist fanatics. (*Smith & Cheetham: Dict. of Christian Antiquities.*)

"They lurk like the old *circumcellions*, a company of vagrant hypocrites."—*Camden: Hieraspistes*, p. 99.

3. A vagrant. (*Cockeram.*)

***çir-cŭm-spĭ'-q-ŭĭs,** *a.* [Formed with Lat. adv. *circum*, on the analogy of *conspicuous*, *perspicuous*, &c.] Seeing all round.

"How can some think to act his ill unseen, when God shall, like the air, be *circumspicuous* round about him?"—*Feltham: Resolves.* (*Rich.*)

çir-cŭm-stănçe, *çir'-cŭm-stănçe, *s.* [Fr. *circonstance*; Sp. & Port. *circunstancia*; Ital. *circonstanza*, from Lat. *circumstantia*, neut. pl. of *circumstans*, pr. par. of *circumsto* = to stand round: *circum* = around, and *sto* = to stand.]

I. *Literally:*

1. That which stands round or is attached to another.

* **(1)** *Of material things:* An adjunct, an accessary.

"The hollow orb of moving *circumstances*
Roll'd round by one fix'd law."
Tennyson: The Palace of Art.

(2) *Of immaterial things:* Any matter or fact attending on or connected with another; an attendant state of things.

"That it is a known rule amongst all divines, that no certain argument can be drawn from the *circumstances* of a parable, but only from the main scope and intention of it."—*Tillotson* (3rd ed., 1722), vol. i. Ser. xix.

¶ Hence the phrases:

In (or under) the circumstances: Taking into consideration all matters connected with that in question; all things being considered.

According to circumstances: In a manner varying according to or dependent on attendant [illegible].

2. A fact, an event, a particular incident or detail.

II. *Figuratively:*

1. Worldly condition as respects wealth or poverty. (Now only used in the plural.)

"... by the storms of *circumstance* unshaken,
And subject neither to eclipse nor wane."
Wordsworth: Excursion, bk. iv.

* **2.** Circumlocution, excessive attention to details.

"And therefore, without *circumstance*, to the point."
Rowlands: The Picture.

† **3.** Details, minutiæ.

"... they are too full of *circumstances* and details."
Lewis: Orig. Early Roman Hist. (1855), ch. xii., pt. i., § 15, vol. ii., p. 56.

¶ (1) Crabb thus distinguishes between *circumstance* and a *situation*: "*Circumstance* is to *situation* as a part to a whole; many *circumstances* constitute a *situation*; a *situation* is an aggregate of *circumstances*. A person said to be in *circumstances* of affluence has an abundance of everything essential to his comfort; he is in an easy *situation* who nothing exists to create uneasiness. *Circumstance* respects that which externally affects us; *situation* is employed both for the outward *circumstance* and the inward feelings. The success of any undertaking depends greatly on the *circumstances* under which it is begun; the particular *situation* of a person's mind will give a cast to his words or actions. *Circumstances* are critical, a *situation* is dangerous.

(2) He thus discriminates between *circumstance*, *incident*, and *fact*: "*Circumstance* is the general term; *incident* and *fact* are species of *circumstance*. *Incident* is what happens; *fact* is what is done; *circumstance* is not only what happens and is done, but whatever in any way belongs to a thing. To everything are annexed *circumstances* either of time, place, age, color, or other collateral appendages which change its nature. Everything that moves and operates is exposed to *incidents*, effects are produced, results follow, and changes are brought about; these are *incidents*: whatever moves and operates does, and what it produces is done or is the *fact* . . . *Circumstance* is often employed with regard to the operations or the properties of things, in which case it is most analogous to *incident* and *fact*: it may then be employed for the whole affair, or any part of it, whatever that can be distinctly considered. *Incidents* and *facts* are either accompanied by *circumstances*, or have *circumstances* belonging to them. . . . *Circumstance* comprehends in its signification whatever may be said or thought of any thing; *incident* carries with it the idea of whatever may befal or be said of any thing; *fact* includes in it nothing but what really is or is done. A narrative therefore may contain many *circumstances* and *incidents* without any *fact*, when what is related is either fictitious or not positively known to have happened: it is necessary in a novel or play to contain much *incident*, and no *facts*, in order to render it interesting; history should contain nothing but *facts*, its authenticity is its chief merit." (Crabb: *Engl. Synon.*)

***çir'-cŭm-stançe,** *v.t.* [Circumstance, s.] To place in a certain situation or position relatively to other things.

"I must be *circumstanced* now."—*Shakesp.: Othello* iii.

çir'-cŭm-stançed, *a.* [Eng. *circumstance*; *-ed.*]

1. Situated or conditioned relatively to other things.

"And in two countries very differently *circumstanced*, individuals of the same species have slightly different constitutions or structure."
Darwin: Origin of Species (ed. 1859), ch. i., p. 29.

2. In a condition as regards wealth or poverty.

***çir'-cŭm-stănt,** *a.* & *s.* [Lat. *circumstans*, pr. par. of *circumsto* = to stand round: *circum* = around, and *sto* = to stand.]

A. *As adj.*: Placed or being around, surrounding.

"Its beams fly to visit the remotest parts of the world, and it gives motion to all *circumstant* bodies."—*Digby: On the Soul.*

B. *As subst.*: One who stands by; a bystander.

"When these *circumstants* shall but live to see"
Herrick: Hesperides, p. 92. (*Davies.*)

***çir'-cŭm-stăn-tĭable (tiable** as **shable),** *a.* [Eng. *circumstant(iate)*; *-able.*] Capable of being circumstantiated. (*Bp. Taylor.*)

çir-cŭm-stăn'-tial (tial as **shal),** *a.* & *s.* [Fr. *circonstanciel*; Lat. *circumstantia*, pertaining to circumstances.]

A. *As adjective:*

I. *Ordinary Language:*

1. *Of things:*

(1) Dependent on circumstances; accidental.

"Would you search at full
How passion rose thro *circumstantial* grades
Beyond all grades developed."
Tennyson: The Gardener's Daughter.

(2) Incidental, accidental, not essential.

(3) Full of small circumstances or minute particular, precise, minute.

"The whole account, from the first appearance of Satan to the private assembly, to the trial of the rebels, is given with *circumstantial* minuteness."—*Lord Early Roman Hist.* (1864), ch. xii. pa. ed. vol. ii. p. 198.

*(4) Full of pomp or show.

". . . and leave all the *circumstantial* part and general life . . ."—*Pope: Letter to H. Cromwell* (1710).

*5. *Of persons:* With an excessive attention to small events and details; precise, punctilious.

II. *Law:* Inferred from circumstances deduced indirectly, not by direct proof.

(*Circumstantial evidence:* Evidence obtained from circumstances, which necessarily or usually attend facts of a particular nature, from which arises presumption; any evidence not direct and positive. A light, *i. e.* a slight presumption, has no weight or validity. A presumption of any kind is relied on only till the contrary has been proved. Still a probable presumption has considerable weight, and a violent one, that is one in which those circumstances appear which necessarily attend the fact, is in many cases held equal to full proof. (*Blackstone*, bk. iii., ch. 23.)

". . . what is popularly known as *circumstantial evidence*. No doubt, *circumstantial evidence*, when perfect, is the highest of all evidence . . ."—*Times*, Jan. 31st, 1878.

¶ Crabb thus distinguishes between *circumstantial*, *particular*, and *minute*: "A *circumstantial* account contains less than *particular*, and that less than *minute*. A *circumstantial* account contains all leading events; a *particular* account includes every event and movement however trivial; a *minute* account omits nothing as to person, time, place, figure, form, and every other trivial *circumstance* connected with the events. A narrative may be *circumstantial*, *particular*, or *minute*; an inquiry, investigation, or description may be *particular* or *minute*, a detail may be *minute*. An event or occurrence may be *particular*, a *circumstance* or *particular* may be *minute*. We may be generally satisfied with a *circumstantial* account of ordinary events; but whatever interests the feelings cannot be detailed with too much *particularity* or *minuteness*." (*Crabb: Eng. Synon.*)

B. *As subst.:* Anything incidental or not essential to the main subject (generally in the plural).

"Who would not prefer religion that differs from our own in the *circumstantial*, before one that differs from it in essentials!"—*Addison: Freeholder.* (Latham.)

"Let me add another hint, concerning the apparatus and *circumstantials* of your play."—*Pope: To A. Hill* (1711).

cir'-cha (2), *s.* [In Gr. *κίρκος* (*kirkos*) = a hawk, from its flying in circles.]

Ornith.: The Harrier, a genus of birds belonging to the family Falconidæ, and constituting the typical genus of the sub-family Circinæ. The bill is moderate, the nostrils sub-oval, the tarsi elongated, the toes generally short, the third quill of the wings the longest, the sides of the head with a circle of feathers like the capital disc of the owls. Yarrell describes three British species, *Circus æruginosus* the Marsh Harrier), *C. cyaneus* (the Hen Harrier), and *C. Montagui* (Montague's Harrier).

çirl, *s.* [Ital. *cirlo* from *strlare;* Sp. *chirlar* = to twitter. Cf. Lat. *sirgulio* = to chirp.] Etymologically it means a twitterer. It is, however, used as an independent word, but only as the first element in the subjoined compound.

cirl-bunting, *s.*

Ornith.: A species of bunting, the *Emberiza cirlus.*

"The *Cirl Bunting* is generally found on the coast, and does not appear to go far inland . . . It is much more shy than the Yellow Bunting. The nest is usually placed higher above the ground than that of the Yellow Bunting. French Yellow Ammer, and Black-throated Yellow Ammer, are the provincial names which have been applied to it . . . In the northern counties the *Cirl Bunting* is very rare . . . The *Cirl Bunting* is most numerous in the southern parts of the European continent."—*Yarrell: British Birds.*

***çir'-ŏ-grille,** *s.* [Lat. *chærogrillus,* from Gr. χοιρογρυλλος (*choirogrullos*) χοιρος (*choiros*) = a young pig, and γρυλλος (*grullos*) = pig.] The hyrax (q.v.) or coney.

"A *cirogrille* which cheweth cude."—*Wyclif: Lev.* xi. 5.

***çirque (que as k),** *s.* [Fr. *cirque.*] [Circus.]

I. *Ordinary Language:*

1. A circus, or circular erection.

"Vast and edgeways; like a dismal *cirque*
Of Druid stones." *Keats: Hyperion,* i.

2. A circle.

II. *Geol.:* An encircling cliff. (*Scrope.*)

cirque-couchant, *a.* Lying or couching in a circle. (*Keats: Lamia,* i. 46.)

cirr-. [Cirrh-.]

çir'-rāte, *a.* [Lat. *cirratus* = curled.] Having a cirrus or cirri.

cirrate antennæ, *s. pl.* Antennæ in which each joint is furnished with cirri, which are generally fringed with fine hairs.

çir-rĕ'-tĕd, *a.* [Lat. *cirrus* = a curl.] Curled. (*Woodward: Fossil Shells.*)

cirrh-, *pref.* [See def.] A wrong but very common form of *cirr-*, from the mistaken notion that the Latin *cirrus* = a curl, represented a Gr. *κιρρος* (*kirrhos*), which is not found.

çir rhā'-grę, *s.* [Lat. *cirrus* = a curl, and Gr. *ἀγρα* (*agra*) = a seizure.]

Med.: Plica, a disease endemic in Poland, Lithuania, and other parts of Northern Europe, characterised by interlacing, twisting, and agglutination or matting of the hair.

çir-rhā'-tą-lūs, *s.* [Lat. *cirrus* = a curl, a tendril; and Gr. *τύλος* (*tulos*) = a knot.]

Zool.: A genus of Annelides, in which the branchiæ consist of very long filaments, and in which a series of long filaments are situated round the nape. (*Craig.*)

çir rhi fēr ŏūs, *a.* [Cirriferous.]

çir'-rhi-form, *a.* [Cirriform.]

çir-rhig'-ĕr-ŏūs, *a.* [Cirriferous.]

çir'-rhi-grāde, *s.* [Lat. *cirrus* = a curl; *gradior* = to walk, move about.]

Nat. Hist.: Having the power of motion by the cirri, or hair-like appendages.

çir-rhip'-ĕm-bo, *s.* [Lat. *cirrus* = a curl; Gr. *ἐμβω* (*embō*) = a baby.]

Ichthy.: A genus of fishes, in which the sides of the body are furnished with cirriform processes. (*Craig.*)

çir-rhi'-ōēą, *s.* [Lat. *cirrus* = a curl.] A genus of fishes belonging to the Percidæ, or Perches, with broad, oval, compressed bodies, pectoral fins, large round; the ventrals behind the pectoral, and the anal and dorsal spines very strong. (*Craig.*)

çir-rhō brăn-chi-ā'-tą, *s. pl.* [Lat. *cirrus* = a curl, and Mod. Lat. *branchiata,* from Gr. *βράγχιον* (*branchion*) = a fin, a gill.]

Zool.: A group of Gasteropodous Molluscs, comprehending but one family, the Dentalidæ.

çir-rhō-pēde, *s.* [Lat. *cirrus* = a curl, and Gr. *πους* (*pous*), genit. *ποδος* (*podos*) = a foot.]

Zool.: The same as Cirriped (q.v.)

çir-rhō nāe-vā, *s.* [Gr. *κιρρος* (*kirrhos*) = yellow, and *νοσος* (*nosos*) = a disease.]

Med.: A disease of the fœtus in which there is a yellow colouration of the serous membrane. (*Dunglison.*)

çir'-rhōse, *a.* [Mod Lat. *cirrosus,* from Class. Lat. *cirrus* = a curl.] The same as Cirrhous (q.v.).

çir-rhō'-sis, *s.* [Gr. *κιρρος* (*kirrhos*) = yellow, and med. suff. *-osis* (q.v.).] A yellow colouring matter, sometimes secreted in the tissues, owing to a morbid process. (*Dunglison.*)

cirrhosis hepatis, *s.* A disease of the liver, in which it becomes smaller and firmer, commonly called "hob-nailed" or "gin-drinker's" liver.

Cirrhosis of the Lung: A disease of the lungs. (*Dunglison.*)

çir-rhō'-tic, *a.* [Formed on analogy of other words from *cirrhosis* (q.v.).] Affected with, or having the character of cirrhosis.

çir'-rhous, çir'-rhōse, *a.* [Lat. *cirrus* = a curl, a tendril.]

Bot.: Terminated by a spiral or flexuose, filiform appendage: as the leaf of *Gloriosa superba.* This is due to an elongation of a costa. (*Lindley.*)

çir'-rhus, *s.* [Cirsus.]

çir'-ri, *s. pl.* [Cirrus.]

çir-ri-bar-bī'-næ, *s. pl.* [Mod. Lat. *cirribarbus,* and fem. pl. adj. suff. *-inæ.*]

Ichthy.: A sub-family of Blenniidæ, distinguished by the lower jaw being larger than the upper. (*Craig.*)

çir-ri-bar'-bus, *s.* [Lat. *cirrus* = a curl, and *barba* = a beard.]

Ichthy.: A genus of fishes ... ng to the family Blenniidæ, having the ... and mouth furnished with numerous cirri. It constitutes the typical one of the sub-family Cirribarbinæ.

çir-rif'-ĕr-ŏūs, çir-rhif'-ĕr-ŏūs, *a.* [Lat. *cirrus* = a curl, and *fero* = to bear.]

Bot.: Bearing cirri, tendrils, or claspers.

çir'-ri-form, çir'-rhi-form, *a.* [Lat. *cirrus* = a curl, and *forma* = a form.] Having the form of a tendril.

çir-rig'-ĕr-ŏūs, *a.* [Lat. *cirrus* = a curl, and *gero* = to bear, to carry.]

1. *Ord. Lang.:* Having the hair curly.

2. *Bot., Zool., &c.:* Having cirri or hair-like appendages.

çir'-ri-grāde, *a. & s.* [From Lat. *cirrus* = a curl, and *gradior* = to go.]

A. *As adj.:* Moving by cirri. (*Owen.*)

B. *As subst.:* An animal moving by cirri. (*Owen.*)

çir-ri-pĕ'-dēs, *s.* [Lat. *cirrus* = a curl; *pes* (genit. *pedis*) = a foot.]

Zool.: An animal of the sub-class Cirripedia (q.v.)

"... now we come to a most important ... in the metamorphosis, or rather, to ... Owen, in the metagenesis, of the young ... Owen: *Lect. on Comp. Anat.,* last ed.

çir-rip'-ĕd-ą, çir-rhip'-ĕd-ą, çir-ri-pĕd'-i-ą, çir-rhi-pĕd'-i-ą, çir ri-ĕd-ą, *s.* [Lat. *cirrus* = a curl, and (genit. *pedis*); Gr. *πους* (*pous*) = a foot.]

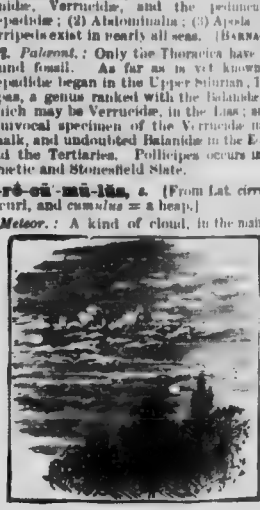
çir-rō-cū'-mū-lūs, *s.* [From Lat. *cirrus* = a curl, and *cumulus* = a heap.]

Meteor.: A kind of cloud, in the main



CIRROCUMULUS CLOUD.

sembling a cumulus, but in certain respects ... like a cirrus too. It consists of a con...

system or series of small roundish clouds placed in order or scattered. It resembles the cirro-cumulus, but is distinguished from it by the absence of a mackerel sky. The name was first given by Mr. Luke Howard.

çir-ró-līte, *s.* [Gr. *κιρρός* (*kirros*) = pale yellow, and Eng. suff. *-ite* (*Min.*) (q.v.).]

Min.: A mineral consisting of phosphoric acid, 41·17; alumina, 39·1; lime, 34·9; water, 15 = 100. It occurs in an iron mine at Lobenstein in Reuss.

çir-rŏse, *a.* [Cirrosus.]

çir-rŏs-tō-mă, *s. pl.* [Lat. *cirrus* = a curl; Gr. *στόμα* (*stoma*) = a mouth.]

Ichthy.: Another name for the Pharyngobranchii (q.v.).

çir-rŏs-tō-mŭs, *a.* [Cirrostomi.] Pertaining to, or characteristic of the Cirrostomi.

çir-rō-strā-tŭs, *s.* [From Lat. *cirrus* = a curl, and *stratus* = strewed, spread flat.]

Meteor.: A kind of cloud blending the characteristics of the stratus and of the cumulus, the former predominating. It consists of

CIRRO-STRATUS CLOUD.

a horizontal or slightly inclined sheet of cloud, with the circumference, which is upward, becoming gradually attenuated, whilst its lower part is undulated or concave. Groups or patches of *cirro-stratus* are sometimes scattered over the sky near the horizon. The name cirro-stratus was first given by Mr. Luke Howard.

çir-rŏûs, *a.* [Cirrosus.]

çir-rŭs, çir-rhŭs (pl. **çir-rī, çir-rhī**), *s.* [Lat. *cirrus* = a curl, a tendril.]

I. *Of both forms:*

1. *Bot.:* The thread-like tendrils or filaments by which certain climbing plants attach themselves to trees, stones, etc.; one of the fulcra or props of plants. (*Craig, Buchanan.*) A cirrus may be on a corolla, a peduncle, a leaf, or a petiole. Examples, the corolla of Strophanthus, the peduncle of *Smilax horrida*, the leaf of *Gloriosa superba*, or the petiole of the pea. (*Lindley.*)

2. *Zool.:* A slender, fringe-like appendage in some inferior animals, which aids in locomotion. (*Carpenter.*)

3. *Ichthy.:* The soft filaments attached to the jaws of certain fishes. (*Craig.*)

II. *Only of the form* cirrus:

1. *Paleont.:* A genus of fossil spiral shells. The shell is discoidal and has a large umbili-

cus; the upper surface bears a row of spines, which in the neighbourhood of the aperture are tubular and have their ends perforated. One genus ranges from the Devonian to the Jurassic. (*Nicholson.*)

2. *Meteorol.:* A form of cloud, composed of thin filaments, the union of which resembles sometimes a brush, sometimes small patches of woolly hair, and again slender network. The cirrus is the feathery or streak like cloudlet which is highest of all in the heavens.

çir-sĭ-ŭm, *s.* [Gr. *κιρσός* (*kirsos*) = a kind of thistle, and to cure varicocele.]

Bot.: A genus of Compositæ, supposed to have healing qualities.

çir-sŏ-çēle, *s.* [Gr. *κιρσός* (*kirsos*) = a swelled vein, and *κήλη* (*kēlē*) = a tumour.]

Med.: The varicose dilation of the spermatic vein. (*Dunglison.*)

çir-sŏ-ĭ-dēs, *a.* [Gr. *κιρσός* (*kirsos*) = a swelled vein, and *εἶδος* (*eidos*) = resemblance.]

Med.: Varicose or resembling a varix. A term once applied to the upper part of the brain, as well as to the spermatic vessels. (*Dunglison.*)

çirs-ŏm-phă-lŏs, *s.* [Fr. *circomphale*, from Gr. *κιρσός* (*kirsos*) = a swelled vein, and *ὀμφαλός* (*omphalos*) = the navel.]

Med.: A varicose dilation of the veins surrounding the navel. (*Dunglison.*)

çirs-ŏph-thăl-mī-ă, *s.* [Gr. *κιρσός* (*kirsos*) = a swelled vein, and *ὀφθαλμός* (*ophthalmos*) = the eye.]

Med.: A swelled or varicose state of the vessels of the eye.

çirs-ŏ-tŏme, *s.* [Gr. *κιρσός* (*kirsos*) = a swelled vein; *τομή* (*tomē*) = a cutting; *τέμνω* (*temnō*) = to cut.]

Surg.: An instrument used in the extirpation of a varix or varicose vein. (*Knight.*)

çirs-ŏt-ŏm-y, *s.* [Gr. *κιρσός* (*kirsos*) = a swelled vein, and *τομή* (*tomē*) = a cutting.]

Surg.: Any operation for the removal of varices by incision. (*Dunglison.*)

* **çir-ur-gien,** *s.* [Surgeon.]

çis (1), *in compos.* [Lat. = on this side.] For definition see etymology.

cis equatorial, *a.* Situated on this side the equator.

Bot. Geog.: The cis-equatorial region of South America constitutes a distinct botanical province. (*Thomé.*)

çis (2), *s.* [Gr. *σής* (*kēs*) = the corn-weevil.]

Entom.: A genus of Coleopterous insects, the typical one of the family Cisidæ, inhabitants of the fungi growing on trees. Tribe, Xylophagi. (*Craig.*)

çis-ăl-pīne, *a.* [Lat. *cisalpinus*, from *cis* = on this side, and *Alpinus* = Alpine, from *Alpes* = the Alps.] Situated south of the Alps; as regards Rome, this side of the Alps; the opposite to Transalpine.

¶ The Cisalpine republic was formed by the French in May, 1797. In 1802 its name was altered to the Italian republic, and in 1805, it became the kingdom of Italy, but by no means the ancestor of the kingdom of Italy now existing.

† **çis-ăt-lăn'-tĭc,** *a.* [Formed on analogy of *Cisalpine*, from Lat. *cis* = on this side, and Eng. *Atlantic*.] On this side of the Atlantic.

çis'-cŏ, *s.* [Etym. unknown.]

Ichthy.: The American popular name for several species of the genus Coregonus.

* **çiser** (1), *s.* [Cider.]

çiser (2), *s.* [Scissors.]

çis'-leū, *s.* [Chisleu.]

Jewish Months: The same as Chisleu (q.v.).

çis-lĭe, *s.* [Cicely.]

¶ *Silken Cislie:* *Vincetoxicum officinale.* (*Gerard.*)

çis-mą-tăn, *s.* [Chicheм.]

† **çis-mŏn-tāne,** *a.* [Lat. *cis* = on this side of; *montanus* = pertaining to the mountains; *mons* = a mountain.] Situated on this side of the mountains.

* **Çis-pa-dāne,** *a.* [Lat. *cis* = on this side, and *Padanus* = pertaining to the *Padus* = the river Po.] Situated on the south side of the Po, as regards Rome, on this side of the Po.

¶ The Cispadane and Transpadane republics were two republics situated respectively on this and the other side of the Po. They were merged in the Cisalpine republic in October, 1797. (*Haydn, &c.*)

çiss-ăm-pĕl-ŏs, *s.* [Gr. *κισσός* (*kissos*) = ivy, and *ἄμπελος* (*ampelos*) = a vine, from the plants being like ivy in the green rambling branches, and like the vine in having the fruit in racemes.]

Bot.: A genus of climbing shrubs. Order, Menispermaceæ. It grows in almost every mountainous part of the Cape of Good Hope. The root is used as an emetic and cathartic by the Boers. (*Dunglison & Craig.*) *Cissampelos convolvulus* is used in Brazil; *C. Pareira*, and *C. Caapeba* in the West Indies, and *C. Mauritiana* in Madagascar as tonics and diuretics. *C. glaberrima* and *C. ebracteata* are prescribed in Brazil against serpent bites. The root of *Cissampelos orbiculata*, an Indian species, yields an intoxicating spirit. (*Lindley.*)

çis-sĭ-dæ, *s. pl.* [From Mod. Lat. *cis* (3) (q.v.), and Lat. pl. adj. suff. *-idæ.*]

Entom.: A family of Coleoptera.

çis-sĭn-ĕm, *s.* [Gr. *κισσινος* (*kissinos*), from *κισσος* (*kissos*) = ivy.]

Med.: A name given to a plaster of ivy used in wounds of the nerves or tendons.

çis-sĭ-tēs, *s.* [Gr. *κισσος* (*kissos*) = ivy.]

Entom.: A genus of Coleopterous insects, belonging to the section Heteromera, and the tribe Trachelides.

çiss-ŏĭd, *s.* & *a.* [Gr. *κισσοειδής* (*kissoeidēs*) = like ivy, from *κισσος* (*kissos*) = ivy, and *εἶδος* = appearance, form.]

A. *As substantive:*

Geom.: A curve invented by Diocles, for the purpose of solving two celebrated problems of the higher geometry, viz., to trisect a plane angle, and to construct two geometrical means between two given straight lines. (*Webster.*)

B *As adj.:* Included (as an angle) between two intersecting curves.

çiss-ŏĭd-ăl, *a.* [Eng. *cissoid*, *-al.*] Pertaining to, or of the nature of a cissoid.

* **çis-sor,** * **çis-sour,** *s.* [Scissors.]

çis-sŭs, *s.* [Gr. *κισσός* (*kissos*) = ivy.]

Bot.: A genus of vine-bearing plants, belonging to the order Ampelideæ. It is closely kin to Vitis, the Vine genus. The leaves of *C. sicyoides* and *C. acida* are said to possess acrid properties. They are deemed useful in bringing feebly obedient tumours to suppuration. The berries of the latter species are also acrid. Both the leaves and the fruit of *C. tinctoria* abound in a green colouring matter, which on exposure becomes blue; it is used by the Brazilians as a dye for cotton fabrics. (*Lindley.*)

çist, *s.* [Fr. *ciste*; Lat. *cista*, from Gr. *κίστη* (*kistē*) = a basket, a chest.]

1. *Arch. & Sculp.:* A chest or basket. A term used to denominate the mystic baskets used in processions connected with the Eleusinian mysteries. It was originally formed of wickerwork, and when afterwards made of metal, the form and texture were preserved in imitation of the original material. When sculptured on ancient monuments it indicates some connection with the mysteries of Ceres and Bacchus. (*Gwilt.*)

2. *Antiquities:*

(1) A tomb of the Celtic period, consisting of a stone chest, covered with stone slabs. (*Webster.*) In Celtic or Druidical buildings, the chamber formed of laterally recumbent blocks of stone. (*Gwilt.*)

* (2) A boxlike excavation.

"These oval pits or *cists* were about four feet long, they were neatly cut into the chalk, and were with the skeletons covered with a pyramid of stones and flints."—*Archæologia*, xx. 340.

(3) A box, usually of bronze, for toilet purposes. Many fine specimens have been found in Italy.

çis-tă-çē-æ, *s. pl.* [Gr. *κίστος* (*kistos*) = the Cistus or Rock-rose, and Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: Rock-roses, an order of plants, the typical one of the alliance Cistales. It consists of shrubs or herbaceous plants, often with viscid branches. The leaves are entire, opposite or alternate, feather-veined, or more rarely fan-veined. The flowers, which are very fugacious, are generally in unilateral racemes; their colour is white, yellow, or red; sepals 3—5, persistent unequal, petals five, rarely three, stamens hypogynous distinct, definite or indefinite in number; ovary one or many-celled, with the style and stigma both simple. Fruit capsular, 3—5 or ten-valved, one-celled, with parietal placentæ, or imperfectly five or ten-celled. They are found chiefly in the South of Europe and the North of Africa. One is British. Known genera in 1845, seven; species 180. For their qualities see COCHLOSPERMUM and LADANUM.

çis-tā'-ceous, *a.* [CISTACEÆ.]

Bot.: Belonging to, or characteristic of the Cistaceæ (q.v.).

çis'-tal, *a.* [Lat. *cist(us)*; Eng. suff. *-al.*]

Bot.: Pertaining to Lindley's botanical alliance Cistales (q.v.).

çis-tā'-lēs, *s. pl.* [From *cistus*, and Lat. fem. pl. adj. suff. *-ales.*]

Bot.: An alliance of plants, placed by Lindley under his Hypogynous Exogens. He includes under it the Cistaceæ, Brassicaceæ, Resedaceæ, and Capparidaceæ, though it is hard to believe that Brassicaceæ is not entitled to rank as the type of an alliance.

çis-tē'-la, çis-tē'-lă, *s.* [Lat. *cistella* = a little chest, dimin. of *cista* = a chest.]

1. *Entom.* (*Of the form* Cistela): A genus of Coleopterous insects, the typical one of the tribe Cistelides. Sub-section, Stenelytra. There are five British species. (*Shuckard.*) *Cistela ceramboides* is found on flowers; *C. sulphurea* is confined to the sea-coast.

2. *Bot.* (*Of the form* Cistella): A capsular shield of some lichens. [CISTULA.]

çis-tē'-l-dēs, *s. pl.* [Lat. *cistela.*]

Entom.: A tribe of Coleopterous insects, of which Cistela is the type. Section Heteromera, sub-section Stenelytra.

Çis-tēr'-cian (cian as **shan),** *s.* & *a.* [Low Lat. *Cistercium*; Fr. *Cîteaux, Cîteaux*, a convent situated near Dijon in France.]

A. *As substantive:*

Ch. Hist.: A member of a certain monastic order in the Roman Church, founded in 1098 by Robert, abbot of Molesme in Burgundy, who having lost hope of inducing the monks, whose chief he was, to live up to the rule prescribed by St. Benedict, retires with twenty associates to Citeaux [see etym.] and founded there a congregation which afterwards developed into the order of the Cistercians. It went through the ordinary cycle of such monastic institutions, *i.e.*, at first its members were poor and really holy; then the fame of their sanctity spreading through Europe, branches of the order were established in many places. To aid men so deserving, large contributions were given by pious men and women, and before the twelfth century had run its course, the Cistercian communities were wealthy.

CISTERCIAN MONK.

With the growth of this wealth, the gradual relaxation of the strict Benedictine rules took place, till finally the Cistercians lost their high reputation and sank to the level of the order against which their secession had been a protest, and to that of the monastic order generally. During the time that the order was rising in importance, it enjoyed the advocacy of the celebrated St. Bernard of Clairvaux, who is regarded as its second parent and founder, so that it is sometimes called the Bernardine order, or the order of St. Bernard. Between them and the Cluniacensians there was considerable animosity, and even public controversy. (*Mosheim: Church Hist.*, cent. xi., xii.)

B. *As adj.:* Pertaining to or connected with the order of monks described in A.

çis'-tern, *çis'-terne, *cis'-terne, *s.* & *a.* [Lat. *cisterna*; O. Fr. *cisterne*; Fr. *citerne.*]

A. *As substantive:*

I. *Ordinary Language:*

1. An artificial receptacle or reservoir for the storage of water.

"From some of these *cisterns* Cæsar's troops were supplied . . ."—*Sharpe: Hist. Egypt*, ch. x.

"There is the *cisterne* where Joseph was cast in of his brethren."—*Maundevile*, p. 108.

2. A natural reservoir or place where the drainage of a watershed collects.

"In the wide *cisterns* of the lakes confin'd."

3. A metal or slate vessel for the storage of water or other liquid.

"A *cistern* containing a hundred and twenty gallons of punch was emptied to his Majesty's health . . ."—*Macaulay: Hist. Eng.*, ch. xxi.

II. *Technically:*

1. *Mining:* A tank in a deep mine-shaft, set upon a scarcement; it serves to receive the water of the pump below, and supply water to the pump above. The usual length for a set of mining-pumps is twenty-five to thirty fathoms. At such intervals cisterns are placed. (*Knight.*)

2. *Steam-engine:* The vessel enclosing the condenser of a condensing steam-engine, and containing the injection water. (*Knight.*)

3. *Glass Manuf.:* The receptacle into which glass is ladled from the pots to be poured on the table in making plate glass, or in casting glass. (*Knight.*)

B. *As adj.:* (See the compounds).

cistern-barometer, *s.*

Meteor. Instrum.: A barometer having the tube immersed below in a cistern of mercury.

cistern-filter, *s.* A cistern having a permanent chamber, which has filtering material intervening between the supply and discharge. (*Knight.*)

cistern-pump, *s.* A small pump, lift, or force for pumping water from the moderate depth of a cistern.

çis-tēr'-na, *s.* [Lat.] A term applied to various parts of the body which serve as reservoirs for different fluids. The fourth ventricle of the brain has been so called. (*Dunglison.*)

***çis-tērn-lēne,** *s.* [O. Fr. *cisterne.*] [CISTERN.] A cistern, a reservoir.

"To that *cisterne-lene* he ran to ren."
Genesis and Exodus, 1023.

çis'-tic, *a.* [Eng. *cist*; *-ic.*] Pertaining to, or of the nature of, a cist.

çis-tō-gās'-tēr, *s.* [Gr. κίς (*kis*) = the corn-weevil, and γαστηρ (*gastēr*) = the belly, from its inflated abdomen.]

Entom.: A genus of Dipterous insects. They belong to the family Muscidæ and subtribe Athericeræ.

çis'-tōme (*Eng.*), **çis-tō'-ma** (*Mod. Lat.*), *s.* [Gr. κίστη (*kistē*) = a small box or chest, and στόμα (*stoma*) = a mouth. Apparently a wrong formation for cistotome.]

Bot.: A funnel-shaped prolongation of the cuticle into the openings of the stomata. It is called also the Ostiole.

çis-tōp'-tēr-is, çis-tōp-tēr'-is, *s.* [Gr. κίστος (*kistos*) = a bladder, and πτερις (*pteris*) = a fern.]

Bot.: A species of fern, so called from the indusium being shaped like a bladder. There are several British varieties, of which *C. fragilis* is the best known.

çis-tū'-dō, *s.* [From Lat. *cista* = a box, and *testudo* = tortoise. Apparently a wrong formation for Cistitestudo.]

Zool.: The Box Terrapins, a genus of the Emydæ or River Turtles in which the two divisions of the carapace, or dorsal shell, are movable on the same axis, and can be so closed as entirely to conceal the enclosed animal. This genus contains the American Box Tortoises. *C. Carolina* is the common Box Tortoise of the United States.

Shakesp.: All's Well, i. 3.

¶ (1) Crabb thus distinguishes between *to cite* and *to quote*: "To *cite* is employed for persons or things; to *quote* for things only: authors are *cited*, passages from their works are *quoted*; we *cite* only by authority; we *quote* for general purposes of convenience. Historians ought to *cite* their authority in order to strengthen their evidence and inspire confidence; controversialists must *quote* the objectionable passages in those works which they wish to confute: it is prudent to *cite* no one whose authority is questionable; it is superfluous to *quote* anything that can be easily perused in the original."

(2) He thus discriminates between *to cite* and *to summon*: "The idea of calling a person authoritatively to appear, is common to these terms. *Cite* is used in a general sense, *summon* in a particular and technical sense: a person may be *cited* to appear before his superior; he is *summoned* to appear before a court: the station of the individual gives authority to the act of *citing*; the law itself gives authority to that of *summoning*. When *cite* is used in a legal sense, it is mostly employed for witnesses, and *summon* for every occasion: a person is *cited* to give evidence, he is *summoned* to answer a charge." (*Crabb: Eng. ***cit-ole**, ***cit-tell**, ***cithole**, ***cytole**, *s.* [O. Sp. *citola* = cithern.]

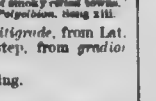
Music: A musical instrument, perhaps a dulcimer.

"A *citole* in his right hand hadde he,
And on his hed, ful seemly on to see."
Chaucer: C. T., 1,931-2.

cit-ra-con-ic, *a.* [Eng. *citr(ic)*, and *aconitic* (q.v.).] Derived from the genera *Citrus* and *Aconitum*.

citraconic acid, *s.*



Chem.: Pyrocitric acid $C_5H_6O_4$ or $C{-}CO.OH$ ‖ $C{-}CO_2OH$

A diatomic bibasic acid, isomeric with itaconic and mesaconic acids obtained by distilling citric acid; water is first given off at about 175°, vapours of acetone and CO, then the residue consists of aconitic acid; on continuing the distillation CO_2 is given off and itaconic acid is formed; afterwards water is given off, and an oily mass is left in the retort, consisting of citraconic anhydride, which, when exposed to the air, absorbs moisture and crystallises into citraconic acid, which melts at 80°. It unites readily with bromine, forming dibrompyrotartaric acid $C_5H_6Br_2O_4$. By the action of sodium amalgam, a solution of citraconic acid is converted into pyrotartaric acid $C_5H_8O_4$. When citraconic acid is subjected to electrolysis, it gives off $2CO_2$ and 2H, and yields allylene $CH_3{-}C{\equiv}CH$. By the action of hypochlorous acid HClO, citraconic acid is converted into chlorocitramalic acid $C_5H_7ClO_5$.

cit-ra-măl-ic, *a.* [Eng. *citric*, and *malic.*] Having the citric and malic acids in its composition.

citramalic acid, *s.*

Chem.: $C_5H_8O_5$. A dibasic acid obtained by the action of zinc on an aqueous solution of chlorocitramalic acid.

cit-ra-mide, *s.* [Eng. *citr(ic)*, and *amide* (q.v.).]

Chem.: $N_2(C_6H_5O_4)''H_6$. A crystalline compound, slightly soluble in water. Obtained by the action of alcoholic ammonia on citric ethers.

cit-ra-tar-tăr-ic, *a.* [Eng. *citric* and *tartaric.*]

citratartaric acid, *s.*

Chem.: $C_9H_8O_8$, a syrupy deliquescent dibasic acid obtained by heating chlorocitramalic acid in a sealed tube, with water, acetone $CH_3.CO.CH_3$, hydrochloric acid and carbon dioxide being also formed.

cit-rate, *s.* [From *citr(ic)*; *-ate* (*Chem.*) (q.v.).] [Citric acid.] Citrate of calcium occurs in onions and in potatoes, citrate of potassium in artichokes and in potatoes.

çĭt'-rē-an, *a.* [Lat. *citre(um)* = a citron, and Eng. adj. suff. *-an.*] The same as CITRINE (q.v.).

çĭt'-rēne, *s.* [Eng. *citr(ic)*, and suff. *-ene.*]

Chem.: $C_{10}H_{16}$. An aromatic hydrocarbon, boiling at 168°. It is obtained from the rind of *Citrus Limonum.*

çĭt'-rē-ŏŭs, *a.* [Lat. *citreus* = pertaining to the *citron.*] Lemon-coloured, citrinous.

çĭt'-rĭc, *a.* [Fr. *citrique*; Lat. *citrus* = the citron-tree.]

Chem.: Of or pertaining to an acid obtained from the juice of the lemon and other fruits.

$$H_2C-CO.OH.$$

tetratomic tribasic acid, which occurs in the juice of lemons, also in gooseberries, currants, &c. It is obtained by allowing the juice to undergo an incipient fermentation, filtering and neutralising by means of powdered chalk, after which milk of lime, the insoluble calcium citrate, is precipitated, and is then decomposed by dilute sulphuric acid. It forms white crystals, soluble in water, and has an acid taste. It is used in dyeing and in calico-printing, and in the preparation of effervescent summer beverages. Citric acid fused with potash is decomposed into oxalic and acetic acids, thus $C_6H_8O_7 + H_2O = C_2H_2O_4 + 2(CH_3CO.OH)$. Citric acid forms ethers. Citric acid has been formed synthetically from glycerin $CH_2OH.CHOH.CH_2OH$, by converting it into symmetrical dichlorhydrin, $CH_2Cl.CHOH.CH_2Cl$ by oxidizing this into dichloracetone $CH_2Cl.CO.CH_2Cl$, which forms with strong hydrocyanic acid an addition compound, cyano-dichloracetone, which by the action of HCl and H_2O is converted into di-
$$CH_2Cl.C-CH_2Cl$$
chloracetonic acid $$HO \quad\quad CO_2H.$$ This is

neutralised by Na_2CO_3, and heated with two mols. of KCN cyanide of potassium, which replaces the 2Cl by 2CN, forming sodium dicyanacetonate; the solution is then saturated with HCl and heated in a water bath, and the citric acid precipitated by milk of lime as calcium citrate. Citric acid forms three series of salts with the alkalies, called citrates. It gives no precipitate with potassium acetate. Citrates of calcium, lead, and silver are insoluble. Citric acid, added to a solution in excess, prevents the precipitation of ferric oxide and of alumina by ammonia.

2. *Pharm.:* Citric acid acts as a refrigerant, and allays thirst and irritation of the skin. Citrate of ammonium increases the secretions. Citrate of iron and ammonia occurs in thin transparent deep-red scales, soluble in water, but almost insoluble in rectified spirit. It acts as a tonic, and is not astringent, and is given to restore the blood to a healthy condition. Citrate of iron and quinine occurs in greenish-yellow deliquescent scales soluble in water. It combines the therapeutic properties of iron and of quinine. Citrate of potassium, a white deliquescent powder, acts as a diuretic.

çĭt'-rĭl, *s. & a.* [From Lat. *citrus* (q.v.).] A term signifying yellow, citron-coloured. It occurs only in the subjoined compound.

citril finch, *s.* A finch, *Fringilla citrinella*, found in Italy, where it is prized for its song. It must not be confounded with the Yellow Ammer, *Emberiza citrinella*, though both have a yellow breast.

çĭt-rĭn-ā'-tion, * çĭt-rĭn-ā'-çi-oun, *s.* [Low Lat. *citrinatio.*] A process by which anything takes the colour of a lemon or orange, the state so induced, yellowness. Originally a term used in alchemy, but still used in medicine.

"Our silver *citrination*,
Our cementing and fermentation."
Chaucer C. T., 14,326

çĭt'-rĭne, * çĭt'-rĭn, * çyt'-ryne, *a. & s.* [Fr. *citrin*; Lat. *citrinus*, from *citrus* = the citron-tree.]

A. *As adj.:* Resembling a citron or lemon; lemon-coloured, of a greenish-yellow colour.

"His nose was heigh, his eyen were *citryne*."
Chaucer: C. T., 2,169.

B. *As substantive:*

1. *Ord. Lang.:* A greenish-yellow or lemon colour.

2. *Min.:* A yellow pellucid variety of quartz.

"A species of crystal of an extremely pure, clear, and fine texture, generally free from flaws and blemishes. It is ever found in a long and slender column, irregularly hexangular, and terminated by an hexangular pyramid. It is from one to four or five inches in length. This stone is very plentiful in the West Indies. Our jewellers have learned to call it *citrine*; and cut stones for rings out of it, which are mistaken for topazes."—*Hill: On Fossils.*

citrine-lake, *s.* A pigment prepared from the quercitron bark. It is a brown pink, which is durable and dries well. (*Weale.*)

citrine ointment, *s.*

Med.: A mercurial ointment, composed of four parts of mercury, twelve of nitric acid, fifteen of prepared lead, and thirty-two of olive-oil.

çĭt'-rĭ-noŭs, *a.* [From Mod Lat. *citrinus* = citron-coloured or yellow.] Lemon-coloured, citreous.

çĭt'-rŏn, *s. & a.* [Fr. *citron*; Low Lat. *citro*, from Gr. κίτρον (*kítron*); Lat. *citrum* (*malum*) = a citron or lemon; *citrus* = the lemon-tree.]

A. *As substantive:*

Botany:

1. The citron-tree (q.v.).

2. The fruit of the citron tree, resembling a lemon, but less acid in taste. It is a native of Asia.

B. *As adj.:* Pertaining to, derived from, or having the qualities of the citron.

citron-tree, *s.*

Botany:

1. The tree, *Citrus medica*, which produces the citron. It has short and stiff branches, oblong toothed leaves, flowers purple externally, and fruit generally large, warted, and furrowed, having a protuberance at the apex, with a very thick spongy adherent rind and a subacid pulp. The Romans brought it from Media, where, however, it is not now, if it ever was, indigenous. It is at present cultivated in gardens in the warmer parts of both hemispheres. It furnishes oil of citron and oil of cedra.

2. A genus of plants of which the lemons, citrons, and oranges are species. Order Aurantiaceæ. (*Crutig.*)

Fingered citron: A citron with a remote resemblance to the human fingers. It constitutes the genus Sarcodactylis.

citron-water, *s.* A water distilled from the rinds of citrons.

citron-wood, *s.* The wood of *Callitris quadrivalvis*, an Algerian tree, much used in cabinet-making.

çĭt-rō-nā'-tion, *s.* [CITRINATION.]

çī-trō-nĕl'-la, *s.* [Mod. Lat. dimin. of Eng., &c. *citron* (q.v.).]

Bot.: A species of grass, *Andropogon citratum.* It yields an essential oil used in perfumery. It is cultivated in Ceylon.

çī-trŏn'-ĕl-ĕl, *s.* [From Mod. Lat. *citronella* (q.v.), and Class. Lat *oleum* = oil.]

Chem.: $C_{10}H_{18}O$, boiling point 220°. It is isomeric with camphor, and is the chief constituent of oil of citronella. Citronellol unites with bromine, forming a dibromide $C_{10}H_{18}Br_2O$, which when heated splits up into water hydrobromic acid HBr and cymene $C_{10}H_{14}$.

*** çĭt'-rŏn-īse,** *v.t.* [Eng. *citron*; *-ize.*] To assume a citron hue. (*Ben Jonson: Alchemist*, iii. 2.)

çī'-trŏn-wŏrts, *s. pl.* [Eng. *citron*; *-worts.*] [WORT, *suff.*]

Bot.: Lindley's name for the Aurantiaceæ.

çĭt'-rŭl, çĭt'-rŭlle, *s.* [CITRULLUS.]

Bot.: The water-melon (*Citrullus vulgaris*), named from its yellow colour.

çĭt-rŭl'-lŭs, *s.* [A dimin. from Lat. *citrus*, from the colour of the fruit when cut.]

Bot.: A genus of plants belonging to the order Cucurbitaceæ. *Citrullus colocynthis* furnishes the drug Colocynth (q.v.).

çĭt'-rŭs, *s.* [Lat. *citrus*; Gr. κίτρος (*kítros*) = the citron-tree.]

Bot.: A genus of trees, the typical one of the order Aurantiaceæ. The leaves, theoretically are compound, are reduced single leaflet, jointed to a leaf-like p The stamens are numerous, and irreg grouped into several parcels; the fruit, peridium, has a leathery rind formed epicarp and mesocarp, which can eas separated from the pulp below. The end sends prolongations inwards, forming gular divisions, in which pulpy cells are oped, so as to surround the seeds which tached to the inner angle. The appropriate of the genus is believed to be the inferior of hills in Nepaul and the sub-Himalayas, which it may extend also into China many species are distinct is doubtful. Li and others think only one—the Citron (*C. medica*), a view to which the advance of winism since Lindley's time will pro direct increased attention. There are va distinct forms in the genus Citrus, wh species or varieties, viz., the Citron, al mentioned, the Orange (*C. Aurantium*) Lemon (*C. Limonum*), the Lime (*C. Lim* the Shaddock (*C. decumana*). Other var or sub-varieties are the Seville or B Orange, sometimes called the Bigarade (*Bigaradia*), the Bergamot (*C. Bergamia*) Mandarin Orange (*C. nobilis*), &c. [BERGA CITRON, ORANGE.]

çĭt'-ryl, *s.* [Eng. *citr(ic)*, and suff. *-yl* (C (q.v.).]

Chem.: A name given to the triatomic cal ($C_6H_5O_4$)''' contained in citric acid. symbol Cit''' is often used to express this cal, as in Citric acid, $Cit'''(OH)_3$

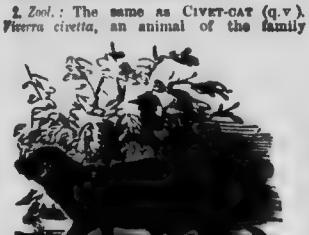
çives, *s. pl.* [Fr. *cive*, from Lat. *cepa*, *cepa*, *cepe* = an onion.] [CHIVES.]

çĭv-ĕt (1), *s.* [Fr. *civette*; Ital. *zibetto* = civet, or a civet-cat; Gr. ζανέτιον (*zanetion*), from Per. *zabâd* = civet; Ar. *zubad* and *sabbâd* = the froth of milk or water, civet.]

1. *Comm.:* A resinous substance, of an odour like musk, obtained from several species of carnivorous animals of the genus Viverra, especially the civet, or civet-cat. The substance is secreted in a pouch, near the anus of the animal. It is used for a perfume.

"This substance approaches in smell to musk and ambergris; it has a pale yellow colour, a somewhat acrid taste, a consistence like that of honey, and a very strong aromatic odour. It is the product of two small quadrupeds of the genus Viverra, of which one inhabits Asia, the other Africa. They are reared with tenderness, especially in Abyssinia. The *civet* is contained in a sac situated between the anus and the parts of generation in each sex. . . . According to M. Bouton-Chalard, it contains a volatile oil, to which it owes its smell; some free ammonia, resin, fat, extractiform matter, and mucus. It affords by calcination an ash, in which there is some carbonate and sulphate of potash, phosphate of lime, and oxide of iron."—*Ure: Dict. of Arts, Manufactures, and Mines.*

2. *Zool.:* The same as CIVET-CAT (q.v.). *Viverra civetta*, an animal of the family



CIVET.

Viverridæ, of which it is the type. It is found in North Africa. It climbs trees with facility. Its food consists of small mammals, reptiles, and birds, as well as roots and fruits. It is sometimes kept in the region which it inhabits for the sake of the perfume which it furnishes. There is an allied species, *Viverra Rasse*, in Java.

civet-cat, *s.*

1. *Literally:*

Zool.: The animal that produces civet.

* 2. *Fig.:* A beaconed dandy, a fop.

"So does Flatt'ry mine;
And all your courtly *Civet-cats* can vent,

çĭv-ĕt-ĕd, *pa. par.* or *a.* [CIVET, *v.*]

çĭv-ic, * **çĭv-ĭck,** *a.* [Fr. *civique*; Ital. *civico*; Lat. *civicus* = pertaining to a citizen; *civis* = a citizen.] Pertaining to a city, or to its inhabitants, government, or customs.

"At *civic* revel, pomp, and game."
Tennyson: Death of Wellington.

civic crown, *s.*

1. *Roman Ant.:* A crown or garland of oak-leaves and acorns, given as a mark of public approbation to any soldier who had in battle saved the life of a comrade. It was considered more honourable among the ancient Romans than any other crown.

"Behind, Rome's genius waits with *civick crowns*,
And the great father of his country owns."
Pope: Temple of Fame, 362.

2. *Arch.:* A garland of oak-leaves and acorns often used as an architectural ornament. (*Gwilt.*)

* **çĭv-ic-ăl,** *a.* [Eng. *civic*; *-al.*] Civic.

"*Civical* crown of laurel, oak, and myrtle."

çĭv-ĭcs, *s.* [The pl. of *civic* used substantively; *cf. mathematics, politics*, &c.] The science of the rights and obligations of citizenship.

çĭv-ĭl, * **çĭv-ĭle,** * **çĭv-ĭll,** *a.* [Fr. & Sp. *civil*; Ital. *civile*, from Lat. *civilis* = pertaining to a citizen; *civis* = a citizen.]

A. *Ordinary Language:*

I. *Literally:*

1. Of or pertaining to a city or state, or the members and inhabitants thereof collectively.

"God gave them laws of *civil* regimen, . . ."—*Hooker: Eccles. Polity*, bk. iii. § 11.

2. Pertaining to any individual member of a community or city.

". . . either out of your natural, or out of your *civil* power."—*Jeremy Taylor.*

3. Pertaining to persons or actions relating to private life, as distinguished from those connected with war.

"Fair shine his arms in history enroll'd;
Whilst humbler lyres his *civil* worth proclaim."
Shenstone.

4. Pertaining to matters or persons connected with secular matters, as distinguished from ecclesiastical.

"Unto whom the chief government of all estates of this realm, whether they be ecclesiastical or *civil*, doth appertain."—*Articles of Religion*, art. xxxvii.

* 5. The same as CIVIC (q.v.).

"With *civile* crownis."
Douglas: Virgil, bk. vi.

II. *Figuratively:*

1. Having the manners or habits of a member of a civilized community; civilized, not rude.

"That wise and *civil* Roman . . ."—*Milton: Areopag.*

2. Courteous, affable, obliging in manners or speech.

3. Courteous, not coarse or rude (applied to speech or actions).

* 4. Sober, grave, serious.

"A *civil* habit
Oft covers a good man."
Beaum. and Fl.: Beggar's Bush.

* 5. Subdued, calm, quiet.

"Once I sat upon a promontory,
And heard a mermaid on a dolphin's back
Uttering such dulcet and harmonious breath
That the rude sea grew *civil* at her song."
Shakesp.: Mids. Night's Dream, ii. 1.

B. *Technically:*

1. *Mil.:* Intestine; applied to a war waged between citizens of the same country, and not with foreigners. [CIVIL WAR.]

"Prosper this realm, keep it from *civil* broils."
Shakesp.: 1 Hen. VI., i. 1.

2. *Polit.:* Connected with, or pertaining to, the internal or domestic government of a state. [CIVIL LIST, CIVIL SERVICE.]

3. *Law:*

(1) Pertaining to an action in a private suit, as distinguished from a criminal trial.

(2) Not natural, but only so far as relates to the rights or privileges of any person as a citizen.

"In case any estate be granted to a man for his life generally, it may determine by his *civil* death; as if he enter into a monastery, whereby he is dead in law."—*Sir W. Blackstone.*

(3) (See extract.)

"*Civil* law is defined to be that law which every particular nation, commonwealth, or community, has established peculiarly for itself . . . now more properly distinguished by the name of municipal law, the term *civil* law being chiefly applied to that which the old Romans used."—*Wharton.*

¶ (1) Crabb thus distinguishes between *civil* and *polite*: "These two epithets are employed to denote different modes of acting in social intercourse: *polite* expresses more than *civil*; it is possible to be *civil* without being *polite*: *politeness* supposes *civility* and something in addition. *Civility* is confined to no rank, age, condition, or country; all have an opportunity with equal propriety of being *civil*, but not so with *politeness*, that requires a certain degree of equality, at least the equality of education; it would be contradictory for masters and servants, rich and poor, learned and unlearned, to be *polite* to each other. . . . *Civility* is rather a negative than a positive quality, implying simply the absence of rudeness. *Politeness* requires positive and peculiar properties of the head and heart, natural and acquired. . . . The term *civil* may be applied figuratively, but *politeness* is a characteristic of real persons only."

(2) He thus distinguishes between *civil*, *obliging*, and *complaisant*: "*Civil* is more general than *obliging*; one is always *civil* when one is *obliging*, but one is not always *obliging* when one is *civil*: *complaisance* is more than either, it refines upon both; it is a branch of *politeness* (v. *Civil*, *polite*). *Civil* regards the manner as well as the action, *obliging* respects the action, *complaisant* includes all the circumstances of the action: to be *civil* is to please by any word or action; to be *obliging* is to perform some actual service; to be *complaisant* is to do that service in the time and manner that is most suitable and agreeable: *civility* requires no effort; to be *obliging* always costs the agent some trouble; *complaisance* requires attention and observation; a person is *civil* in his reply, *obliging* in lending assistance, *complaisant* in his attentions to his friends. One is habitually *civil*; *obliging* from disposition; *complaisant* from education and disposition: it is necessary to be *civil* without being free, to be *obliging* without being officious, to be *complaisant* without being affected." (*Crabb: Eng. Synon.*)

civil-architecture, *s.* The branch of architecture which is employed in the construction of buildings for the purposes of civil life, such as private houses, warehouses, churches, &c., in distinction from military and naval architecture.

¶ For the different orders of architecture, see ORDER. See also COLUMN, CORINTHIAN, DORIC, IONIC, &c.

civil death, *s.* [CIVIL, B. 3. (2).]

civil-engineer, *s.* One who follows the art or science of civil-engineering.

civil-engineering, *s.* The science or art of constructing machinery for manufacturing purposes, constructions, and excavations, for general transit, as canals, docks, railroads, &c. It is so called in contradistinction to military engineering, which is confined to war. Other branches of engineering are *mechanical engineering* and *sanitary engineering* (q.v.).

* **civil gown,** *s.* The dress of a citizen or civilian.

civil law, *s.* The law of a state, city, or country; appropriately the Roman law comprised in the Institutes, Code, and Digest of Justinian, and the Novel Constitutions. (*Blackstone.*) [ROMAN LAW.]

civil list, *s.*

I. *Originally:*

* 1. A list of the entire expenses of the civil government.

2. The revenue appropriated to support the civil government.

3. The officers of the civil government who were paid from the public treasury.

II. *In England:* The three meanings given above became more limited in their extent till finally they were confined to the list of expenses, the revenues and the dependents of the crown instead of the country.

¶ Originally it embraced the list of expenses of the crown, what now would be called the civil service, the army, the navy—everything.

¶ From the conquest in A.D. 1066 to the Restoration of Monarchy in A.D. 1660, all governmental expenses, whether those of the crown, the civil officers, the army, or the navy, now defrayed from a common fund, furnished partly by the revenues of the unsold crown

lands, and partly by taxation, the sovereign being left free to spend the money with uncontrolled freedom. At the restoration the military and naval expenses, which during war were necessarily great, were deemed extraordinary, and were withdrawn from the common fund, which was then appropriately called civil, as distinguished from military and naval. It supported the royal family, the judges, the various pensioners, &c. In 1830 the Civil List was limited to the charges required for the sovereign and his dependents. On the accession of Queen Victoria arrangement was made again regarding the Civil List, and in December, 1847, it was settled at £385,000. In 1881 it amounted to £407,468.

civil remedy, *s.*

Law: That given to a person injured by action, as opposed to criminal prosecution.

civil servant, *s.* A covenanted non-military servant of the crown.

civil service, *s.*

1. That branch of the public service which includes the covenanted non-military servants of the government.

2. The body of civil servants collectively.

civil service reform, *s.* Officers in the Civil Service of the United States were appointed by the President or Heads of Departments until 1883, when a Civil Service Reform bill was passed for the purpose of doing away with the inefficiency resulting from this method and the political use made of it. This law required that candidates for all except certain leading positions should be subjected to a Civil Service Examination, and those who passed best be appointed to the positions, without regard to political affiliation. The law has worked well, though it has not been strictly observed.

civil state, *s.* The entire body of the laity or citizens, as distinct from the military, ecclesiastical, and maritime. (*Craig.*)

civil suit, *s.*

Law: A suit for a private claim or injury.

* **civil-suited,** *a.* Modestly, not gaudily arrayed.

"Thus, night, oft see me in thy pale career,
Till civil-suited morn appear."
Milton: Il Penseroso, 138.

civil war, *s.* A war between citizens of the same country.

¶ The passage of the Rubicon by Julius Cæsar, which commenced the civil war between him and Pompey, took place in January, 49 B.C. The battle of Pharsalia, which decided its issue, was on August 9, 48 B.C. The assassination of Julius Cæsar, which led to the immediately succeeding civil war, was on March 15, 44 B.C., and the sea-fight of Actium, which finally decided its issue, on September 2, 31 B.C.

Coming to England, the first battle of St. Albans, the earliest in the wars of the Roses, was in A.D. 1455. That civil war may be supposed to have extended to the battle of Bosworth, August 22, 1485, and the accession of Henry VII., in whom the Houses of Lancaster and York, the antagonists in the late strife, were united. The first battle in the civil war which produced the Commonwealth and the Cromwellian Protectorate was that of Edgehill, October 23, 1642; that of Naseby, which decided the issue, was on June 14, 1645, though the struggle cannot be said to have finally terminated earlier than the accession of Charles II., who was proclaimed king on May 8, 1660.

The capture of Fort Sumter, at Charleston, in South Carolina, by the Secessionists, which was the first military operation in the American civil war, was on April 13, 1861. The surrender of General Lee to General Grant, on April 9, 1865, and that of General Kirby Smith, commandant of Galveston, on June 5 of the same year, were its final scenes.

civil year, *s.* The legal year, or annual account of time which a government appoints to be used in its own dominions, as distinguished from the solar year, measured by the revolution of certain of the heavenly bodies. (*Whewell.*)

* **çiv-il-ä´-tion,** *s.* [Fr., perhaps corrupted from *civilisation.*] Intoxication. (*Cant.*)

"In a state of civilation."—*De Quincey.*

çi-vil´-i-an, *s.* & *a.* [Civil.]

* **3.** A civil office; one pertaining to a civilized state.

"If there were nothing in marriage but mere *civility*, the magistrate might be most fit to be employed in this service."—*Sp. Hall: Cases of Conscience*, iv. 2.

4. Politeness, courtesy, good breeding, and manners towards others.

5. (*Pl.*): Acts of politeness and courtesy; the rules and practice of polite society.

"Love taught me shame; and shame, with love at strife,
Soon taught the sweet *civilities* of life."
Dryden: Cymon and Iphigenia, 139-4

¶ For the difference between *benefit, favour, kindness,* and *civility,* see Benefit.

† **çiv´-i-li-za-ble,** *a.* [Eng. *civilis(e)*; *-able.*] Capable of being civilised. (*Chambers.*)

çiv-il-i-zä´-tion, *s.* [Fr. *civilisation.*]

I. *Ordinary Language:*

1. The act or process of civilizing.

¶ Not used in Johnson's time in the sense in which we now employ it. The only meaning assigned to it in the edition of his dictionary published in 1779, the last which received his corrections, is the legal definition given below. [II.]

"It had the most salutary consequences in assisting that general growth of refinement and the progression of *civilization.*"—*T. Warton.*

2. The state of being civilized; refinement.

". . . occupied with taming the wild earth, and performing the functions of pioneers of *civilization*. . . ."—*Sir G. C. Lewis: On the Influence of Authority in Matters of Opinion*, ch. iii.

¶ Civilization consists in what may be broadly called culture in a nation; and a nation may be considered as civilized when a large proportion of those belonging to it have their intellectual and moral faculties and all their higher nature in large measure developed and becoming increasingly so with the advance of years. Before this can take place, a considerable amount of material prosperity must have been achieved, between which and the culture already described there are continual action and reaction.

At present barbarism, semi-civilization, and civilization are seen contemporaneously existing in the world, and the question suggests itself, How has this phenomenon been produced? In solving it inquiry needs to be made as to the original state of man. Individuals can move backward as well as forward in culture, and it is axiomatic that those aggregations of individuals called nations or races can do the same. The mass of men in this country believe Scripture to have decided that the present population of the earth has sprung from Noah's family, and that he and his household were far removed from barbarism. The contrary view that the original state of man was a barbarous one, an opinion generally held by the old Romans, has of late been revived and has been embraced by many Darwinians and others. The Duke of Argyle has ably defended the more common hypothesis, while that recently revived is strongly maintained by Sir John Lubbock's "Origin of Civilization" (1870), Dr. Edward B. Tylor's "Primitive Culture" (1871), and other publications.

Regarding progression in material prosperity, certain stages tend to occur (1) a barbarous one, in which one feeds on roots, fruits, and fishes, when these last can be caught without effort; (2) the state of a hunter; (3) that of the shepherd, in which, to avoid the uncertainty of the result in hunting, wild animals are domesticated; (4) the agricultural state; and (5) that of manufactures and commerce. Regarding mental advance, M. Auguste Comte in publications issued between 1830 and 1842 maintained that nations necessarily pass through a theological, a metaphysical, and a positive or scientific stage. Littré in France (1845), and Buckle in England (1857—61) ably and earnestly supported the same view.

* **II.** *Law:* A law, act of justice, or judgment which renders a criminal process civil; which is performed by turning an information into an inquest, or the contrary. (*Burrill.*)

"Alle called on that cortayse and *claymed* his grace."
E. Eng. Allit. Poems, Cleanness, l. 987.

¶ Crabb thus distinguishes between to *ask* or *ask for*, to *claim*, and to *demand*. "*Ask*, in the sense of *beg*, is confined to the expression of wishes upon the part of the *asker* without involving any obligation on the part of the person *asked*; all granted in this case is voluntary or complied with as a favour: but *ask for*, in the sense here taken, is involuntary, and springs from the forms and distinctions of society . . . To *ask for* denotes simply the expressed wish to have what is considered as due; to *claim* is to assert a right or to make it known; to *demand* is to insist on having without the liberty of a refusal . . . *Asking for* supposes a right not questionable; *claim* supposes a right hitherto unacknowledged; *demand* supposes either a disputed right [not always] or the absence of all right, and the simple determination to have." (*Crabb: Eng. Synon.*)

clāim, * **clame,** * **cleyme,** *s.* [O. Fr. *claim*; Low Lat. *clameum*, from Lat. *clamo* = to call or cry out.]

...ands of Lafitte, Latour, Chateau Margaux, and others. Many of the clarets sold in this country are nothing more than the vin ordinaire used by the French peasants and working classes. A genuine claret should contain from 16 to 20 per cent. of proof-spirit. Fictitious clarets are sometimes prepared by mixing a rough cider with a cheap French wine, and colouring with cochineal, logwood, elderberry, hollyhock, indigo, litmus, red cabbage, beetroot, or rosaniline. To detect these colouring matters make a jelly by dissolving five grammes of gelatine in 100 cubic centimetres of warm water, and pour it into a square flat mould. From this cake of jelly cubes about three-quarters of an inch square are cut with a sharp wet knife, and are immersed in the wine; they are taken out after twenty-four to forty-eight hours, washed slightly, and sections cut in order to see how far the colouring matter has penetrated. If the wine is pure, the colour will be confined to the edges of the slice, or will not have penetrated more than one-eighth of an inch. The colouring matters mentioned above permeate rapidly, and colour the jelly. For other adulterations of wine, &c., see *Blyth's Manual of Practical Chemistry*.

1. To act in opposition or in a contrary direction; to interfere, to come into collision (generally followed by the prep. *with*).

"The multiplicity of the laws hindered their execution. Rival courts clashed." —*C. M. Yonge: The Early and Middle Ages of England*, ch. xxxii.

2. To chatter, to gossip, to tell tales. (*Scotch.*)

"I will not stay to clash and quibble,
About your espiegles, I'll not quibble."
Ordered: Poems, p. 96.

¶ The prep. *with* is frequently added.

"But high my qualities I bring,
To stand up clashing with a thing,
A creeping thing, the like of them
Burns: Poems, ii. 67.

B. *Trans.:* To cause anything to give out a loud noise by striking it violently against another.

"High o'er the chief they clashed their arms in air,
And, loosing from the clouds, reject the war."
Pope: Homer, Iliad xx. 55.

clăsh (1), *s.* [Clash, *v.*]

I. *Literally:*

†**B.** *Intrans.:* To cling.

"Direct
The *clasping* ivy where to climb."
Milton: P. L., ix. 216.

¶ Crabb thus distinguishes between to *clasp*, to *hug*, and to *embrace*: "All these terms are employed to express the act of enclosing another in one's arms: *clasp* marks the action when it is performed with the warmth of true affection; *hug* is a ludicrous sort of *clasping*, which is the consequence of ignorance or extravagant feeling; *embrace* is simply a mode of ordinary salutation. . . . In the continental parts of Europe, embracing between males as well as females is universal on meeting after a long absence, or taking leave for a length of time." (*Crabb: Eng. Synon.*)

class-i-cism, *s.* [Eng. *classic*; *-ism.*]

1. A classical idiom, expression, or style.

2. An affectation of or preference for classical authors or idioms.

"Catholicism, *classicism*, sentimentalism, cannibalism: all into that make up men in France, are rushing and roaring in that gulf."—*Carlyle: French Revolution*, pt. iii., bk. v., ch. i.

class-i-cist, *s.* [Eng. *classic*, *-ist.*] One skilled or learned in the classics. (*Hallam.*)

class-i-fi-a-ble, *a.* [Eng. *classify*; *-able.*] Capable of being classed or arranged according to classes.

"These changes are *classifiable* as the original operations are."—*J. S. Mill: System of Logic*, i. 364.

class-if-ic, *a.* [Lat. *classis* = a class, and *facio* (pass. *fio*) = to make.]

1. Consisting of or constituting a class or division.

2. Relating to classification.

class-if-i-cat-ion, *s.* [Formed on analogy from *classify* (q.v.).]

1. *Ord. Lang.*: The act of bringing into or arranging in classes or orders.

"In the *classification* of the citizens, the great legislators of antiquity made the greatest display of their powers."—*Burke.*

2. *Nat. Science*: Animals, plants and minerals are carefully classified by naturalists. Though the use of the term classification may seem to imply that these are placed in classes only; yet these are only one of the numerous designations of the several categories in which they are placed. Linnæus arranged all natural objects in the earth under the head *Imperium Naturæ* (the Empire of Nature). He divided it into *Regnum animale* (the Animal Kingdom), *Regnum vegetabile* (the Vegetable Kingdom), and *Regnum lapideum* (the Stony or Mineral Kingdom). Each is next divided by him into *Classes* (Classes), *Ordines* (Orders) Genera and Species, what are now called varieties being occasionally discriminated. His categories, larger or smaller, were consequently seven: Empire, Kingdom, Class, Order, Genus, Species, Variety. The most comprehensive term now employed in zoology is Sub-kingdom, immediately below which comes the Phylum (a term very generally substituted for Class, and intended to show genetic relationship), then Order, Family, Sub-family, Genus, Species, and finally Variety or Sub-species. Synonymous terms, such as group, section, sub-section, &c., are sometimes used in lieu of some of those given above. The names of zoological families should properly end in *idæ*, and sub-families in *inæ*, and in botany alliances end in *ales* and orders as a rule in *aceæ*. Uniformity in such terminology is very desirable, and the present practice is in that direction.

¶ For the difference between natural and artificial systems of classification, see SYSTEM. For particular systems, look classified; see BINARY and QUINARY. As bearing on present views of the philosophy of classification, see also DARWINISM, SPECIES, &c.

In classifying animals or plants, care must be taken to distinguish between *analogy* and *affinity* (see these words). It is only when there is affinity between two species, two genera, &c., that they should be put together. A linear classification is not consistent to nature. For the binomial method of naming objects of natural science, see NOMENCLATURE.

class-i-fi-ca-tor, *s.* [Mod. Lat.] One who classifies; a classifier, a taxonomist.

class-i-fi-ca-to-ry, *a.* [Formed by analogy from Eng. *classification* (q.v.).] Pertaining to classification.

"... but to inquire what is the value of the difference between them under a *classificatory* point of view."—*Darwin: Descent of Man* (1871), pt. i., ch. vii., vol. i., p. 234.

class-i-fied, *pa. par.* or *a.* [CLASSIFY.]

class-i-fi-er, *s.* [Eng. *classify*; *-er.*] One who classes, or arranges things in classes or divisions.

"If plan had not been his own *classifier*, he would never have thought of handing a separate order for his own exception."—*Burrows: Records of Man* (1871), pt. i., ch. vi., vol. i., p. 191.

class-i-fy, *v.t.* [Lat. *classis* = a class, and *facio* (pass. *fio*) = to make.]

1. To distribute in classes or divisions.

2. To arrange according to a system.

class-i-fy-ing, *pr. par.*, *a.*, & *s.* [CLASSIFY.]

A. & **B.** *As pr. par.* & *participle. adj.*: (See the verb).

C. *As subst.*: The act or process of arranging in classes or according to a system; classification.

class-ing, *pr. par.*, *a.*, & *s.* [CLASS, *v.*]

A. & **B.** *As pr. par.* & *participle. adj.*: (See the verb).

C. *As subst.*: The act of arranging in classes or divisions, classifying.

"It may be true that our conscious inferences involve acts of *classing*. But it does not, therefore, follow that our cognitive acts of *classing* involve inferences."—*J. S. Mill: System of Logic*, i. 374.

class-is (pl. **class-es**), *s.* [Lat.]

1. *Ord. Lang.*: A class, order, or body. [CLASS.]

"He has declared his opinion of that *classis* of men, and did a ... as could to hinder their growth."—*Lord Clarendon.*

2. *Eccles.*: A body or convocation having judicial authority in certain churches.

"Give to your rough gown, wherever they meet it, whether in pulpit, *classis*, or provincial synod, the precedency and the pre-eminence of decreeing."—*Milton: Observations on the Articles of Peace between the Earl of Ormond and the Irish.*

class-tic, *a.* [Gr. κλαστός (*klastos*) = broken.]

clastic rocks, *s. pl.* Clastic or fragmental rocks are ... d by Naumann into psephitic, psammitic, and pelitic. They are composed of materials derived from the waste of various rocks. Sandstones and grits differ from breccias and conglomerates merely in the size of the fr ... ments of which they are composed, and therefore should be included among the clastic rocks. (*Rutley: Study of Rocks.*)

***clat,** *s.* [CLOD, CLOT, *s.*]

1. That which is raked together.

"What are all men on earth, but a number of worms crawling and creeping upon a *clat* ... had of clay?"—*E. Boyd: Last Battell*, pp. 35, 36.

2. An instrument for raking together ... ure, weeds, &c.; a hoe. (*Sir Walter Scott.*)

3. The act of raking together.

clat, claut, clawt, *v.t.* [CLOT, *v.*]

1. *Lit.*: To clean, to scrape; to rake together. (*Scotch.*) (*Sir Walter Scott.*)

"That set hae tarrow't at it ...
But or the day was done I trow,
The lasses they hae *clautet* ...
Fu' clean that day."
Burns: A Dream.

2. *Fig.*: To accumulate by griping or by extortion.

"We hae heard about this sair distress.—Here is four pound. May it do nae guid to him who *clawts* it out o' the widow's house."—*M. Lyndsay*, p. 66.

clatch, *v.t.* [CLAT, *v.*] (*Scotch.*)

1. To daub with lime.

2. To close up with any glutinous or adhesive substance; as "to *clatch* up a hole," with slime, clay, &c.

3 To finish any piece of workmanship in a careless and hurried way, without regard to the rules of art. In this sense a house or wall is said to be *clatched up*, when the workmen do it in such haste, and so carelessly, that there is little prospect of its standing long.

clătch, *s.* [CLATCH, *v.*]

1. Anything thrown for the purpose of daubing; as "a *clatch* of lime," as much as is thrown from the trowel on a wall. (*Scotch.*)

2. Any piece of mechanical work done in a careless way. Thus an ill-built house is said to be "a mere *clatch*."

3. Mire raked together into heaps.

4. A dirty woman; a drab. (*Scotch.*)

clăth-răr'-ĭ-ą, *s.* [Lat. *clathri* (pl.) = a trellis or grating, especially to the cages of animals; Gr. κλῆθρα (*klēthra*), pl. of κλῆθρον (*klēthron*) = a bolt or bar for closing a door: κλαίω (*klaiō*) = to shut; and Lat. fem. sing. suff. *-aria*.]

Paleont.: Originally proposed by Brongniart for a group of plants from the coal measures, now included in Sigillaria, afterwards applied by Mantell to some Cycadean stems which he found in the Wealden beds of Tilgate Forest. From the alternating large and small scars on the stem they are believed to be allied to the genus Cycas. Nothing is known with certainty as to their foliage and fruit, though leaves and single nuts have been found in rocks of the same age which may belong to them. Eight species are known from beds of secondary age.

clăth'-rāte, *a.* [Lat. *clathri*, *clatri* = bars, lattice; Gr. κλῆθρα (*klēthra*).]

Bot. & Zool.: Presenting the appearance of lattice-work.

clăth-rō-çyś'-tĭs, *s.* [Gr. κλῆθρα (*klēthra*) pl. = lattice-work, and κύστις (*kustis*) = a bladder.]

Bot.: A genus of Palmellaceous Algæ. The plants occur in immense abundance in fresh-water ponds, which they make appear grass-green.

clăth'-rōid, *a.* [Lat. *clathri* = lattice-work; suff. *-oid*.] Clathrate (q.v.).

clăth-rŏp'-ō-rą, *s.* [Gr. κλῆθρα (*klēthra*) = lattice-work; and πόρος (*poros*) = . . . a passage, a pore.]

Paleont.: A polyzoon from the Upper Silurian and Devonian rocks.

clăth-rŏp'-tĕr-ĭs, *s.* [Gr. κλῆθρα (*klēthra*) pl. = lattice-work, and πτερίς (*pteris*) = a fern.]

Paleont.: A genus of fossil ferns. *Clathropteris* [illegible] is found in Mesozoic rocks in Scania.

clăth'-rōse, *a.* [As if from a Lat. *clathrosus*.]

Entom.: Having deep striæ crossing each other at right angles. A good example of this occurs in the abdomen of some of the Staphylinidæ.

clăth'-rų-lāte, *a.* [Mod. Lat. *clathruli* = fine lattice-work; *-ate*.] Marked with very fine lines crossing each other at right angles.

clăth'-rų-lĭ'-ną, *s.* [CLATHRULATE.]

Zool.: A genus of Protozoa, belonging to the Heliozoa, or Sun Animalcules. The body has a globular, siliceous clathrate shell, and is supported by a stalk.

clătt'-ĕr, ***clăt'-ĕr**, *v.i.* & *t.* [Dut. *klateren* = to rattle, to clatter; *klater* = a rattling, a clatter. A frequent. form of *clack* (*Skeat*).]

"The arrows in the case
Of the goddesse *clatren* faste and rynge."
Chaucer: *C. T.*, 2,260.

"An hundred dogs bayed deep and strong,
Clattered an hundred steeds along."
Scott: *The Lady of the Lake*, i. 2.

II. *Figuratively:*

1. To chatter, to talk idly and noisily.

"That none of ye *clatter* ne calle."—*Townsley Myst.*, p. 216.

"Here is a great deal of good matter
Lost for lack of telling;
Now, siker, I see thou do'st but *clatter*."
Spenser.

*2. To blab, to let out a secret.

"Counsel ought to be kept and not to be *clattred*."
"Children ben ay *clattinge* as thou knowest."
MS. Digby, 41, f. 9. (*Halliwell.*)

B. *Transitive:*

1. *Lit.*: To knock two bodies together so as to cause a loud rattling noise.

"When all the bees are gone to settle,
You *clatter* still your brazen kettle."
Swift.

***II.** *Figuratively:*

1. To dispute, to argue noisily.

2. To blab, to let out secrets.

clatter-bones, *s. pl.* Two pieces of bone or slate placed between the first and second, or second and third fingers, which are made to produce a sharp or clattering noise, similar to that produced by castanets.

clătt'-ĕr, ***clăt'-ĕr**, *s.* [CLATTER, *v.*]

I. *Literally:*

1. A loud and sharp rattling noise, arising from the striking together or collision of two bodies sharply.

"I can no cloyne and *clatter*."
Bale: *Nature*, 1,423. (*Halliwell.*)

2. Any loud or tumultuous noise.

"There thou shouldst be;
By this great *clatter*, one of greatest note
Seems bruited."
Shakesp.: *Macbeth*, v. 7.

II. *Fig.*: Chattering, loud and empty talk.

"As good that thou had
Makien stille thy *clatter*."
Townsley Myst., p. 199.

II. *Technically:*

1. *Min.*: Clay is composed of hydro . . . cate of aluminium, usually with a mec . . . admixture of sand, iron oxides, and . . . substances. In the earlier mineralogi . . . figured under that simple name as a n . . . genus with many species under it, o . . . species with many varieties. Thus . . . second edition of Phillips's "Miner . . . eighteen minerals figure as kinds of cla . . . the fourth edition (1837)—that by . . . Allan, F.R.S.E., &c.—these are redu . . . thirteen, viz.: (1) Slate-clay or sha . . . Adhesive Slate, (3) Polishing Slate, (4) . . . marge, (5) Fuller's Earth, (6) Tripoli, (7 . . . (8) Lemnian Earth, (9) Cimolite, (10) M . . . Meal, (11) Black Chalk, (12) Pipe-cla . . . (13) Potter's Clay. In Dana, clay of di . . . kinds figures simply as a synonym of v . . . minerals. In the "British Museum Catal . . . there is a category of clays. A great . . . minerals have more or less of alumina i . . . composition; its presence may often . . . tected by the peculiar smell which the m . . . emits when breathed upon. The co . . . clay chiefly depends upon its containi . . . iron in a ferrous or a ferric state. S . . . the dark-coloured oolitic clays contain . . . quantities of a bituminous matter; . . . clays give off a most offensive odour . . . burnt into bricks.

2. *Chem.*: Clay is principally hydrou . . . cate of aluminium, $Al_2O_3.2SiO_2.2H_2O$. . . purest clay is called Kaolin (q.v.). . . generally contain much free silica, also c . . . carbonate, calcium sulphate, oxide of . . . magnesium carbonate, and small quan . . . of alkaline salts, phosphates, and iro . . . ites. Fire-clay is more refractory . . . greater the percentage of alumina wh . . . contains in proportion to the fluxes (al

alkaline earths, and ferrous oxide), and the smaller the quantity of the silica in proportion to the silicate of aluminium. Clay possesses the property of absorbing ammonia and organic matter, &c., from liquid sewage applied to its surface, and thus not only promotes the growth of agricultural crops, but also purifies water percolating slowly through it. For analysis of Fire-clay, see *Watts's Dict. of Chem.*, 2nd Supt., p. 335.

3. *Geol. & Paleont.:* Clay is simply mud produced by the wearing down of rocks. If a stream bring down sediment into a still water, the heavier boulders fall first, the pebbles next, then gravel, after which little remains but fine silt, which makes the water look turbid for a time, but gradually settles down at the bottom, and becomes mud or clay. Clay suspended in water is precipitated by the addition of sea-water. Sterry Hunt made experiments on the water of the Mississippi. (*Chem. News*, xxx., p. 97.) Hence the deposits of mud formed at the entrance of the river into the Gulf of Mexico. When hardened into a thinly laminated rock, and perhaps coloured black by carbonaceous matter, it becomes shale. A form of it called Fire-clay exists in the coal measures just beneath each seam of coal, it constituted the vegetable soil in which the ancient forest, the remains of which have been transformed into coal, grew. Whilst sandstone is, as a rule, too porous to retain fossils uninjured, clay, shale, or anything equivalent does so admirably, and a palæontologist should give particular attention to every finely laminated stratum which he may see in any series of rocks which he proposes to examine.

clay-iron ore, *s.* The same as Clay-ironstone (q.v.).

clay-ironstone, *s.*

1. *Min. & Geol.:* A mineral or rock occurring generally in the form of bands or nodules in the carboniferous series of beds. It consists of carbonate of iron mechanically mingled with earthy matter, the metallic carbonate having been produced by the action of decaying vegetable matter on any protoxide of iron in solution with which it may have been brought in contact. (*Lyell.*) Occurs principally in the coal measures.

2. *Paleont.:* Nodules of clay-ironstone often enclose shells, encrinites, ferns, and other organisms.

clay-kiln, *s.* A kiln or stove for burning clay.

clay-land, clay-soil, *s.* Ground or land composed to a great extent of clay.

clay-loam, *s.* Clay mixed with sand, chalk, and organic matter. It is generally very fertile.

clay-marl, *s.* Marl with the argillaceous element abnormally abundant in it. It is generally white and chalky; marl is a mixture of clay and chalk.

Clay-screening machine: A machine for sifting pulverised clay, so as to prepare it for some of the finer ceramic manufactures. (*Knight.*)

clay-slate, *s.*

1. *Geol.:* A rock, called also Argillaceous Schist. It is often exceedingly fissile, cleaving in directions across the planes of stratification. Its colours vary from greenish or bluish-grey to a leaden hue. It is composed of indurated clay which has been subjected to great pressure. Sometimes particles of mica impart to it a shining and silky lustre. The yellow cubical mineral of metallic lustre often scattered through it is iron pyrites. A great part of it is metamorphic, but some is fossiliferous. The clay-slates of Great Britain belong to the Palæozoic age.

2. *Comm.:* It is the common roofing slate, for which its fissile character renders it well adapted. It is used also for school-boys' slates. Good slates should not imbibe water, if they do so, they will soon be decomposed by the weather.

clay-stone, *s.* & *a.*

A. *As substantive:*

Geol.: A felstone of granular texture, and not containing any imbedded crystals. It is of igneous origin. It varies much in colour, being flesh-tinted, brown, brownish-yellow, green, &c. Formerly specimens of it were often designated, compact felspar. It constitutes the paste, matrix, or basis of the subjoined porphyry.

B. *As adj.:* Having clay-stone, &c., as its basis.

Clay-stone porphyry:

Geol.: An igneous rock consisting of clay-stone with imbedded crystals.

C. *As substantive:*

I. *Ord. Lang.:* The act of covering or dressing land with clay.

II. *Technically:*

1. *Sugar-making:* An operation by which sugar is purified.
"The *claying* now begins: which consists in applying to the smoothed surface of the sugar at the base of its cone a plaster of argillaceous earth, or tolerably tenacious loam, in a pasty state. The water diffused among the clay escapes from it by slow infiltration, and descending with like slowness through the body of the sugar, carries along with it the residuary viscid syrup, which is more soluble than the granulated particles. Whenever the first magma of clay has become dry it is replaced by a second, and this, occasionally, in its turn by a third, whereby the sugar cone gets tolerably white and clean."—*Ure: Dict. of Arts, Manufactures, and Mines: Sugar.*

2. *Mining:* The act of lining the blast-hole with clay to prevent the explosive becoming damp.

claying-bar, *s.*

Mining: A cylindrical bar for driving tenacious clay into the crevices of a blast-hole to prevent percolation of water or the charge.

claying-house, *s.*

Sugar-making: A house for the operation of claying.
"The cones remain twenty days in the *claying house* before the sugar is taken out of them."—*Ure: Dict. of Arts, Manufactures, and Mines; Sugar.*

2. Clarified liquor.

3. *Carp., &c.*: Clear space between two bodies. (Only in the phrase, *in the clear.*)

" Crabb thus distinguishes between *clear*, *lucid*, *bright*, and *vivid*: "These epithets mark a gradation in their sense; the idea of light is common to them, but *clear* expresses less than *lucid*, *lucid* than *bright*, and more than *vivid*. A mere freedom from dullness constitutes *clearness*, the presence of light and consequent removal of darkness constitutes *lucidity*; *brightness* supposes a certain strength of light; *vividness* a freshness combined with the strength and even a degree of brilliancy. . . . These epithets may with equal propriety be applied to colour as well as to light: a *clear* colour is unmixed with any other; a *bright* colour has something striking and strong in it; a *vivid* colour something lively and fresh in it. . . . In their moral application they preserve a similar distinction: a conscience is said to be *clear* when it is free from every spot or stain; a deranged understanding may have *lucid* intervals; a *bright* intellect throws light on everything around it; a *vivid* imagination glows with every image that nature presents." (*Crabb: Eng. Synon.*)

I. *Biol.:* Segmentation of the vitellus; [called ovo- or yolk-cleavage.

2. *Crystallography:*

(1) The act of cleaving or splitting a crystal in a certain direction in which it is easy to do so, the state of being so cleft. This line of easy fissure, as a rule, is parallel to one or more of the faces of the crystal. Cleavage tends to reduce a mineral to the form of its primary or primitive crystal.

(2) The line along which such splitting takes place

"In building up crystals these little atomic bricks often arrange themselves into layers which are perfectly parallel to each other, and which can be separated by mechanical means; this is called the *cleavage* of the crystal." —*Tyndall: Frag. of Science* (3rd ed.), xiv. 407.

3. *Geology:*

(1) The act or capability of cleaving certain slaty rocks into an indefinite number of thin laminæ, parallel to each other but not parallel to the planes of stratification (*Lyell*); the state of being so cleft.

(2) The cleft or fissure which is thus produced. Cleavage is divided into laminar fission, or Flaggy Cleavage, coincident with bedding planes, and Slaty Cleavage, deviating from the direction of the bedding planes. Slaty Cleavage is a fissile structure in certain slaty or other rocks distinct from both stratification and joints, though in some cases liable to be mistaken for one or other of these. It most frequently occurs in clay-slate, or other argillaceous rock, next in frequency to which it is found in gneiss, micaschist, hypogene-limestone, &c. Murchison, in his "Silluria," shows that slaty cleavage exists in the Silurian and other older rocks, and in those of Devonian age. It is not uncommon in the carboniferous rocks of Ireland, but less so in that formation generally. Slaty cleavage, or slaty texture, has been superinduced by the rock having been subjected to great pressure, which also affects any fossils which the rock may contain, squeezing and distorting them to a considerable extent. Flaggy cleavage has been produced by the regular deposition of thin layers of sediment one upon another. Slaty cleavage is seldom met with in rocks of eruptive origin, except in beds of volcanic ash, and occasionally in some of the older lavas. A structure, called Foliation, resembling laminar fission, is found in altered sedimentary rocks. It is due to the segregation of any one mineral component of the rock along a more or less regular plane, and thus differentiating the rock into a series of alternating layers of different composition.

cleavage-cavity, *s.*

Biol.: The cavity of a blastosphere (q.v.).

cleavage-cell, *s.*

Biol.: A blastomere (q.v.). Called also a cleavage-globule.

cleavage globule, *s.* [CLEAVAGE-CELL.]

cleavage-mass, *s.*

Biol.: Any cell of a morula (q.v.).

cleavage planes, *s. pl.*

Crystallog.: Planes along which a mineral may be most easily cleft.

†2. *Of the elements:* Mildness, softness.

"Then in the *clemency* of upward air."—*Dryden.*

¶ Crabb thus distinguishes between *clemency*, *lenity*, and *mercy*: "*Clemency* and *lenity* are employed only towards offenders; as mercy towards all who are in trouble, whether from their own fault or any other cause. *Clemency* lies in the disposition; *lenity* and *mercy* in the act; the former as respects superiors in general, the latter in regard to those who are invested with civil power: a monarch displays his *clemency* by showing *mercy*; a master *lenity* by not inflicting punishment where it is deserving. *Clemency* is arbitrary on the part of the dispenser, flowing from his will independent of the object on whom it is bestowed; *lenity* and *mercy* are discretionary, they always have regard to the object and the nature of the offence, or misfortunes; *lenity* therefore often serves the purposes of discipline, and *mercy* those of justice by forgiveness, instead of punishment; but *clemency* [sometimes] deals as God by forbearing to punish where it is merited." (*Crabb: Eng. Synon.*)

Hooker: *Eccl. Pol.*, bk. v., § 77.

"The progress of the ecclesiastical authority gave birth to the memorable distinction of the laity and of the *clergy* which had been unknown to the Greeks and Romans. The former of these appellations comprehended the body of the Christian people; the latter according to the signification of the word, was appropriated to the chosen portion that had been set apart for the service of religion."—*Gibbon*: *Decl. & Fall*, ch. xv.

II. *Technically:*

1. *Theology:*

(1) The chief New Testament passages to which the word clergy is ultimately traceable back are two. One is 1 Pet. v. 3, where the elders are exhorted not to be lords over God's "heritage" (Auth. Vers.), or lording it over the "charge allotted to you" (Revised Vers.). The words in the Greek are τῶν κλήρων (*tôn klêrōn*), the genit. pl. of κλῆρος (*klêros*), the same word which is used by the Greek ecclesiastical writers for clergy. In the passage in St. Peter it obviously means the whole body of believers in any particular congregation, or in the church collectively viewed as "God's heritage," or as a pastor's charge. The word "God" in the Authorised Version was, as its being spelled in italics shows, inserted by King James's translators; it is not in the original. In the second passage, Acts i. 15—26, the word κλῆρος (*klêros*) is used of the apostolate from which Judas fell, and to which Matthias was elected (verses 17, 25), and the plural κλῆροι (*klêroi*), of the lots cast to decide his election (v. 26).

(2) The verse in St. Peter [No. (1)] doubtless alludes to a multitude of Old Testament passages in which the Israelites are described as the inheritance or heritage of God (Deut. xxxii. 9, Psalms xxviii. 9, lxxviii. 71, Jer. x. 16, Joel ii. 17, &c., &c.); as also is the country of Canaan (1 Sam. xxvi. 19, 2 Sam. xxi. 3, Psalm lxviii. 9, &c., &c.). The word in these and various other passages is κληρονομία (*klêronomía*), a derivative of κλῆρος (*klêros*). Its primary etymological meaning is *lot* (see etym.), and it is used with tacit reference to the distribution to the several tribes of their respective possessions by lots (Num. xxvi. 52—56, Joshua xiv 1–3, xv. 1, xvi. 1, &c., &c.) When the distribution took place, the Levites received no territory as a heritage, God being their inheritance (Num. xviii. 20, Deut. x. 9, xviii. 1, 2), as was also the priesthood of some of them (Joshua xviii. 7); the sacrifices of Jehovah made by fire (Joshua xiii 14), and tithes (Num. xviii. 21—24, Deut. xiv. 28, 29). Reciprocally God claimed them as his special servants, taking them in lieu of the first-born devoted to him when the Egyptian first-born were slain (Exod. xiii. 11, 12, 13, 15, Num. iii. 12, 45, viii. 17, &c.). He said of them "The Levites shall be mine." An analogy being drawn between the special position of the Levites and that of the Christian ministry as alike ordained to spiritual functions, κλῆρος (*klêros*), used originally by metonymy for all church members, became limited to the spiritual chiefs.

2. *Church History:*

(1) *In the Early Church:* St. Paul scarcely anything from those to whom he ministered (Acts xx. 33, 34, and 1 Cor. ix. 1–18), his general practice being to support himself by tent-making (Acts xviii. 3), but he understood that as a rule those who preached the gospel should live of the gospel (1 Cor. ix. 13, 14). This support enabled the presbyters of the several churches at a very early date in Christianity to withdraw from secular occupations and give their whole time to the work of their calling.

(2) *In mediæval times:* Century by century, almost to the time of the Reformation, at least till about 1200 A.D., the power and influence of the clergy went on to increase. In every instance of notorious vice on the part of one discharging sacred functions was found some order to which he belongs, whilst every instance of conspicuous virtue increases it. The clergy never could have obtained the influence which they did unless at least a vast majority of their number had been really spiritual men. They had other advantages of no mean kind. They were the only educated class [BENEFIT OF CLERGY]. They were members of an international society, which wherever Christianity had rooted itself set up side administrators of the sacraments and a confraternity with a chief believed to hold the keys of the kingdom of heaven, the right to every opportunity of rising to the highest power over the imagination, the conscience, and ultimately the earthly possessions of men. Availing themselves of these advantages, they actually rose to a pitch of authority which perhaps no other priesthood except that of the Indian Brahmans ever rivalled. It was for a time an advantage to Europe that knowledge ruling over ignorance, and partial refinement holding in control violence, a ladder by which the humble could climb to great heights of society, while beside the church genius of humble birth prevented from rising, being held down by the weight of feudal chains. But not even the best order of men are to be trusted with absolute power, and at length the priesthood, the clergy converted most civil governments into their thinly disguised foes. [GUELPHS AND GHIBELLINES, &c.] Means were taken to abridge their power, each new scheme, as Blackstone shows, ingeniously evading finally their tyranny and rapacity, rather than their doctrinal views, excited a great part of Europe against them, and brought on the revolt against their domination known as the Reformation. During the mediæval period the monastic orders were looked upon as belonging to the clergy. Abbots, priors, &c., were known as the regular clergy, bishops, deans, priests, &c., as the secular clergy.

(3) *Post-reformation times:* The civil enactments on one hand, and the lay members of several churches on the other, gained back from the clergy, in countries where the Reformation was successful, a great part of what they had lost during times of greater ignorance (for details see REFORMATION, ROYAL SUPREMACY, &c.

"Went to that lith in the *cleve*?"—*Romaunt*, 160.

*** clēv-ēr, * clev-ere,** *s.* [CLEAVER (2).]

clēv-ēr, *a.* [The etymology is doubtful. Wedgwood thinks the word was derived from the notion of seizing, as Latin *rapidus* from *rapio*, Scotch *gleg* = quick of perception, clever, quick in motion, expeditious, from the Gothic *gaa* = to seize, to catch. The Swiss has also *cleik, clak, clauck, clake, claut* (identical with English *clutch*) = a hook, a hold, claw, or talon; to *clak* or *clek* = to catch, snatch, and hence *clenk, clenck* = lively, agile, clever, dexterous, light fingered. One is said to be *clenck* of his fingers who lifts a thing so *cleverly* that bystanders do not observe it. (*Jamieson.*) Now the Old English had a form *clivor* = a claw or clutch, exactly corresponding to the Scotch *clek, clauk*. Hence the Old English to *clever*, Dutch *klauwen, klieven* = to claw oneself up, climb, scramble; and hence also he believes is formed the adjective *clever* in the sense of snatching, catching, in the same way as the Scotch *cleik, clenck*, above mentioned. But *kleverig* = sticky; Low Ger. *kleriek, klafik*; *klefsk finger* = thievish fingers, to which everything sticks." Another derivation is that suggested by Rev. A. B. Palmer (*Leaves from a Wood-hunter's Note-book*, ch. x.), which Prof. Skeat seems inclined to adopt, that it is a modification of Mid. Eng. *deliver* = nimble, active. Prof. Skeat adds that it is not unlikely that this modification has been aided by a Prov. Eng. *clever, clever* = ready to seize.] (DELIVER, *a.*)

1. Dexterous, skilful, expert; possessing skill and talent (*of persons*).

". . . yet no country in Europe contained a greater number of *clever* and selfish politicians."—*Macaulay Hist. Eng.*, ch. xiii.

2. Showing skill and talent, skilful, ingenious (*of things*).

"It was the *cleverest* mockery of the two."—*Sir R. L'Estrange.*

*3. Neat, apt, proper, suitable.

4. Good-natured; possessing an agreeable disposition. (*American.*) (*Webster.*)

[illegible] thus distinguishes between *clever*, [illegible] *expert, dexterous*, and *adroit*: "*Clever* and *skilful* are qualities of the mind; *expert, dexterous*, and *adroit*, refer to modes of physical action. *Cleverness* regards in general the readiness to comprehend; *skill* the maturity of the judgment; *expertness* a facility in the use of things; *dexterity* a mechanical facility in the performance of any work; *adroitness* the suitable movements of the body. A person is *clever* at drawing who shows a taste for it, and executes it well without much instruction; he is *skilful* in drawing if he understands it both in theory and practice; he is *expert* in the use of the bow if he can use it with expedition and effect; he is *dexterous* at any game when he goes through the manœuvres with celerity and an unerring hand; he is *adroit* if by a quick, sudden, and well-directed movement of his body, he effects the object he has in view. . . . *Cleverness* is rather a natural gift; *skill* in *cleverness* improved by practice and extended knowledge; *expertness* is the effect of long practice; *dexterity* arises from habit combined with agility; *adroitness* is a species of *dexterity* arising from a natural agility." cli-măc-tĕr'-ic, * **cli măc'-ter-ick,** *a. & s.* [Eng., &c., *climacter*; *-ic*.]

A. *As adj.*: Critical, dangerous; pertaining to the great climacteric [B.], or to any one of lesser peril.

B. *As subst.*: One of certain periods of a man's life in which his constitution is said to undergo great changes, involving him in danger till they are over. They are multiples of 7 or of 9, as 35, 49, 63. The most perilous of these, called by way of eminence the grand climacteric, is his 63rd year—for $9 \times 7 = 63$. The 7th year of life is also dangerous. The grand climacteric of life is said to have been recognised by Hippocrates.

Climacteric disease:

Med.: A disease affecting both men and women, but more obvious in the former. It may be looked for about the 63rd year of age, but varies in the time of its coming according to the constitution of the individual, the limits being in the one direction 50, and in the other 75. Its most common predisposing cause is mental anxiety or suffering. The expression of the countenance alters for the worse, the pulse becomes accelerated, the flesh wastes away without obvious cause; there are sleepless nights, and wandering pains flit through the head and chest, and sleep is either deficient or brings little refreshment. After a time recovery as a rule takes place, but the countenance never recovers its former aspect, or the constitution its vigour.

* **cli-măc'-tĕr'-i-cal,** *a.* [Eng. *climacteric*; *-al*.] The same as *climacteric* (q.v.).

"One of these, an elderly man, who confessed to having passed the grand *climacterical* year (9 multiplied into 7) of 63. Though he did not say precisely by how many years ..."—*De Quincey: Works* (ed. 1853), vol. ii., p. 147.

* **cli'-măc'-tĕr-y,** *s.* [Eng. *climacter*; *-y*.] The working up to a climax.

* **cli-ma-tăr'-chic,** *a.* [Gr. κλίμα (*klima*), (genit. κλίματος (*klimatos*) = a climate; ἄρχω (*archō*) = to rule, to govern.] Presiding over or regulating the climates.

cli'-mate, * **cli-mat,** * **cly-mat,** * **cly-mate,** *s.* [Gr. κλίμα (*klima*); κλίνω (*klinō*) = to cause to bend or slant. (1) The inclination or slope of ground; (2) a slope imagined by the ancients of the globe from the equator to the pole; (3) a zone or a parallel of latitude, the space between these parallels of latitude held to be synonymous with a climate.]

I. *Ordinary Language:*

* **1.** *In the Greek sense:*

"*Climate*, a portion of the earth contained between two circles parallel to the equator."—*Phillips: The New World of Words.*

2. *In a sense intermediate between the Greek one and that presently in use:* A country, a region.

"The *climate* of Gaul [Galliarum plagam] is enclosed on every side with fences that environ it naturally."—*Holland: Reminiscences*, p. 67.

3. Characteristic condition of a country or district with regard to weather; meteorological conditions viewed as a whole. (**II.**)

II. *Meteorology:*

(1) *Present climate of the several parts of the world:* The most potent causes regulating climate are latitude on the one hand, and elevation above the sea level upon the other, the former cause producing perpetual snow and ice around the North and South Poles, and the latter acting with similar effect on the summits of such mountain chains as the Himalayas or the Andes. Were these the sole causes, lines of equal temperature, or, as they are technically called, isothermal lines, would coincide with circles of latitude; instead of doing this however, they are parallel neither to the equator nor to each other. [ISOTHERMAL.] In addition to the two above-mentioned causes, must be reckoned also the position and direction of the several continents and islands, the position and depth of the seas, and the direction of currents and winds. Our own country is often tacitly assumed to be the normal climate by which all others are to be tested, in reality, being an island, whilst most of the land existing in the world is distributed in continents, its climate is one of an exceptional character. It is of the type called insular, that is, such as exists in an island in which the sea diminishes the difference in temperature between summer and winter and between night and day. The normal type of climate, that existing on continents, is called excessive; in it a great difference exists between the temperature of summer and that of winter, as well as between that of the night and that of the day. Asia and North America are the best existing examples of excessive climates. In Britain an east wind, blowing in winter over the frozen steppes of Russia, is cold and dry; a south wind in summer coming over the continent of Europe, if not [illegible] motely from the Sahara, is hot and dry; [illegible] a south-west wind, bringing heat, [illegible] "depressions" innumerable, and in [illegible] even spent cyclones from the warm [illegible] the Atlantic, is the parent of heat, [illegible]

(2) *Past climate of the several countries of the world:* There is distinct geological [illegible] that the climate of the world has undergone [illegible] time past, being, in Europe and North [illegible] at least, higher at one time and at another [illegible] than now. During the carboniferous [illegible] the vegetation and the animal life too [illegible] uniform from the Arctic zone to the [illegible] that the temperature must have varied [illegible] in different latitudes, and little also [illegible] summer and winter. The temperature [illegible] Permian is doubtful; during a portion [illegible] there may have been a glacial period [illegible] stony corals of the oolite naturally suggest [illegible] tropical or all but tropical climate. The [illegible] perature of the eocene was high. It [illegible] fell, however, during the miocene and [illegible] ober pliocene, till in the upper pliocene [illegible] was for a time absolutely glacial. Since [illegible] comparatively recent geological events [illegible] risen to what we have it now. Sir [illegible] Lyell considered that hygone changes were [illegible] bably produced by different distribution [illegible] land and water over the globe, a glacial [illegible] coming when a great deal of land, and the [illegible] land, was round the poles, and one of great [illegible] when most of the land was round the equator. Mr. Croll, on the contrary, following in the [illegible] tion in which Sir John Herschell led the way, believes that minute alterations on the [illegible] city of the earth's orbit will produce cycles [illegible] of temperature in one direction for 10,500 years, and then in the other for the same length of time. [GLACIAL PERIOD.]

"... the inordinately great change of climate in the prodigious lapse of time, all included in the same glacial period."—*Darwin: Origin of Species* (1859), ch. ix., p. 304.

B. *Trans.:* To ascend by means of the hands and feet, to mount

"The screaming peacock chased in hot pursuit,
And *climbed* the garden trellises for fruit."
Longfellow: Tales of a Wayside Inn: The Student's Tale: The Falcon of Ser Federigo

¶ Crabb thus distinguishes between to *arise* or *rise*, to *mount*, to *ascend*, to *climb*, and to *scale*: "The idea of going upwards is common to all these terms; *arise* is used only in the sense of simply getting up, but *rise* is employed [either in that sense or] to express a continued motion upward: a person *arises* [or *rises*] from his seat or bed; a bird *rises* in the air, the silver [quicksilver] of the barometer *rises*: the three first [first three] of these terms convey a gradation in their sense; to *arise* or *rise* denotes a motion to a less elevated height than to *mount*, and to *mount* that which is less elevated than *ascend*: a person rises from his seat, *mounts* a hill, and *ascends* a mountain. *Arise* and *rise* are intransitive only; the rest are likewise transitive . . . *climb* and *scale* express a species of rising: to *climb* is to rise step by step by clinging to a certain body; to *scale* is to rise by an escalade or species of ladder employed in scaling the walls of fortified towns: trees and mountains are *climbed*; walls are *scaled*" (*Crabb: Eng. Synon.*).

† climb-a-ble (mb as m), *a.* [Eng. *climb*; *-able*.] That may be climbed or ascended.

clo-a-ca (pl. **clo-a-cæ**), *s.* [Lat.]

* I. *Ordinary Language:*

1. A sewer, an underground drain or conduit.

¶ The Roman Cloaca Maxima (the greatest or main sewer) is said to have been constructed, or at least commenced, under the auspices of king Tarquinius Priscus, about B.C. 588. It is still used in the drainage of Rome.

2. A privy, a house of office.

II. *Technically:*

1. *Anat.*: A part of the intestine in which the intestinal, ovarian, and urinary outlets terminate. This structure exists in birds, in reptiles, in the amphibia, and in the mammalian order Monotremata. In the rotifera also the perivisceral cavity terminates in a dilatation or cloaca, which forms the common outlet for the digestive, generative, and water-vascular systems. There is a cloaca also in insects, and one also in the sucal ascidians. The latter is the common cavity into which the atrial chambers open.

In the embryonic development of man there is a period during which a cloaca, like that of the inferior animals, exists.

2. *Pathol.*: The opening, in cases of mortification, leading to the enclosed dead bone.

clo-a-cal, *a.* [Lat. *cloacalis* = pertaining to a cloaca.] Pertaining to or of the nature of a cloaca.

cloak, ***cloke,** *s.* [O Fr. *cloque, cloke, cloche*; from Low Lat. *cloca* = (1) a bell, (2) a horse man's cloak.]

I. *Lit.*: A loose wide outer garment worn over the other clothes; a mantle.

"Then gave him, for a soldier meet,
A soldier's *cloak* for winding sheet."
Scott: Kokeby, vi. 33.

2. *Fig.*: A disguise, a blind, a cover; anything used as a means of concealing one's thoughts or plans.

"Using our liberty for a *cloak* of malicious-ness." *Ussher*, 16.

* Crabb, after showing that *cloak, mask, blind*, and *veil*, when used figuratively, are all employed in a bad sense, thus discriminates between them: "The *cloak*, as the external garment, is the most convenient of all coverings for the purpose of keeping concealed what we do not wish to be seen; a good outward deportment serves as a *cloak* to conceal a bad character. A *mask* only hides the face; a *veil* only serves to conceal only as much as human looks can effect. A *blind* is made to shut out the light and prevent observation; whatever, therefore, conceals the real truth, and prevents suspicion by a false exterior, is a *blind*. A *veil* prevents a person from seeing as well as being seen; whatever, therefore, obscures the mental sight acts as a veil to the mind's eye." (*Crabb: Eng. Synon.*)

cloak-anemone, *s.*

Zool.: [ANEMONIA *sulcata*], commensal with crabs.

***cloak-bag,** *s.* A bag in which cloaks and other clothes were carried; a portmanteau, a travelling-bag.

cloak-pins, *s. pl.*

1. Large pins used to fasten a cloak.

2. The pegs affixed to a rail, on which to hang up cloaks, coats, &c.

"A huge pair of stag's antlers, which . . . served for what we vulgarly call cloak-pins." *—Scott: Monastery*, ch. xiii.

cloak-room, *s.* A room or office at places of public resort, as a railway station, &c., where cloaks, small parcels, &c., can be left in charge for a time.

cloak, † **cloke,** *v.t.* [CLOAK, *s.*]

1. *Lit.*: To cover or dress with a cloak.

clŏck (1), ***cloke,** ***clok,** ***clokke,** *s.* & *a.* [A.S. *clucga*; Icel. *klukka, klukra*; Sw. *klocka*; Dan. *klokke*; Wel. *cloc*; Fr. *cloche*; Dut. *klok*; Ger. *glocke*; Ir. *clog*; all = a clock, a bell. The origin of the word is doubtful, but it is probably connected with *cluck* (q.v.).]

A. *As substantive:*

I. *Ordinary Language:*

1. *Literally:*

(1) In the same sense as II.

"When the *clock* stroke twelf."—*Township Myst.*, p. 113.

"The *clock* has strucken twelve upon the bell."
Shakesp.: Comedy of Errors, i. 2.

* (2) A watch, especially one which strikes the hours.

* (3) The striking or strokes of a clock.

"I told the *clocke* and watch'd the wasting light."
Turbervile.

* (4) *The clock of a stocking:* Flowers or figured work about the ankle, probably because used originally of bell-shaped ornaments.

"His stockings with silver *clocks* were ravished from him." *—Swift.*

(5) The ball-like fruit of the Dandelion, *Leontodon Taraxacum*. Named from the practice of children, who playfully blow away the feathery globe to ascertain "what o'clock it is."

* 2. *Fig.*: A guide, a monitor.

"Reynold had awaked them: and his honour, the *Clock* to itself, knew the true minute when Exception bid him speak, and, at this time, His tongue obeys his hand."
Shakesp.: All's Well that Ends Well, i. 2.

☞ *O'clock* = of the clock, is used as equivalent to *by the clock*; as, *what o'clock is it?* = *what time is it by the clock?*

"What is't *o'clock?*—Upon the stroke of four."—*Shakesp.: Richard III.*, iii. 2.

II. *Technically:*

1. *Horol.*: An instrument differing from a watch in not being adapted to be carried on the person, and having a motive weight or spring, a train of gearing, index hands, and figured dial, and a pulsative device to determine the rate at which the mechanism shall move.

(1) *Hist.*: The dial was an early invention for keeping time. [DIAL.] The clepsydra followed next. [CLEPSYDRA.] One of these latter instruments, that of Plato, B.C. 372, was made to sound upon organ-pipes the hour of the night when the dial could not be seen. Wheel-work set in motion by springs and weights was known in the time of Archimedes, 287–212 B.C., and applied to mechanical engines and toys. Two other appliances were needful to make a clock, viz., to join the wheels to a pointer which traversed the dial, and to contrive a mode of regulating the speed of the going works. When these features were united to complete the mechanism of a clock is not known. About A.D. 1000 Ebn Junis of the Saracenic University of Cordova, in Spain, had a pendulum clock to which it is thought that Gerbert, a student at that seat of learning, and afterwards Pope Sylvester II., added the escapement. In A.D. 1288, a clock was placed in the palace yard, London, and shortly after that date they began to be supplied to cathedrals, churches, palaces, town halls, &c., till at length they became numerous everywhere.

(2) *Kinds of clocks now in use:*

(*a*) A *chamber clock* is called in the trade a tower clock. Its external appearance is familiar to everyone.

(*b*) A *chiming clock*, sometimes called a musical clock, is one in which the hours or fractions are marked by a carillon. These instruments were first made in Germany as early as A.D. 1580.

(*c*) A *regulator* was a watchmaker's clock of superior quality for regulating time-pieces.

(*d*) An *astronomical clock* is one which has a compensating pendulum, and is otherwise of marked quality; it is used in determining time when astronomical observations are being taken.

(*e*) An *electric clock* is one whose movements are regulated by electro-magnetic devices.

2. *Astron.*: [1. *Horol.*].

3. *Elect.*: [1. *Horol.*].

"Move it sometimes with a broom, that the seeds clog not together."—*Evelyn.*

¶ Crabb thus distinguishes between to *clog*, to *load*, and to *encumber*: "*Clog* is figuratively employed for whatever impedes the motion or action of a thing, drawn from the familiar object which is used to impede the motion of animals; *load* is used for whatever occasions an excess of weight or materials. A wheel is *clogged*, or a machine is *clogged*; a fire may be *clogged* with coals, or a picture with colouring. *Clog* and *encumber* have the common signification of interrupting or troubling by means of something irrelevant. Whatever is *clogged* has scarcely the liberty of moving at all, whatever is *encumbered* moves and acts but with difficulty." (*Crabb: Eng. Synon.*)

2. *Arch.:* The square space attached to a regular monastery or large church, with a peristyle or ambulatory round, and usually with a range of buildings over it. The cloister is perhaps *ex vi termini*, the central square shut in or closed by the surrounding buildings. Cloisters are usually square on the plan, having a plain wall on one side, a series of windows between the piers or columns on the opposite side, and arched over with a vaulted or ribbed ceiling. It mostly forms part of the passage of communication from the church to the chapter-house, refectory, and other parts of the establishment. In England nearly all the cathedrals, and most of the collegiate churches and abbeys, were provided with cloisters. On the continent they are commonly appended to large monasteries, and are often decorated with paintings and contain tombs. (*Gwilt.*)

"*Prince Henry.* Here it reigns for ever:
The peace of God, that passeth understanding,
Reigns in these *cloisters* and these corridors."
Longfellow: The Golden Legend, iv.

Layamon, ii. 66.

*** clŏng, * clonge,** *pret. of v.* [CLING.]

*** clŏng-ĕn,** *pa. par.* or *a.* [CLING.]

clŏn ic, *a.* [Low Lat. *clonicus*, from Gr. κλονος (*klonos*) = any violent confused motion.]

Med.: Noting tumultuary inordinate interrupted motion within the bodily frame. It is used specially of the epileptic and convulsive motions. Dr. Cullen and his followers applied the term *clonic convulsions* to what he deemed spasms characterised by involuntary alternate motions of contraction and relaxation such as may be seen in hysteria, and *tonic convulsions* to those characterised by contractions not quickly succeeded by alternate relaxations. Of this class the chief example is tetanus. This terminology is now abandoned.

"In the other form of spasm, the contractions of the affected muscles take place repeatedly, forcibly, and in quick succession; and the relaxation, if or ever is so sudden and frequent. This has been named *clonic spasm*."—*Watson: Lectures on the Principles and Practice of Physic*, lect. xxxii.

clŏof, cloove, clufe, *s.* [Dan. *klov*, Icel. *klauf.*] A hoof.

clŏok, cleuck, *s.* [CLAW. (*Scotch.*)

(5) To grapple with, to engage in a hand-to-hand fight, to join battle.

"If I can *close with* him, I care not for his thrust."—*Shakesp.*: 2 *Hen. IV.*, ii. 1.

6. *To close with the land*:

Naut.: To come near to the land.

¶ (1) Crabb thus distinguishes between to *close* and to *shut*: "*Close* is to *shut*, frequently as the means to the end. To *close* signifies simply to put together; to *shut* signifies to put together so *close* that no opening is left. The eyes are *shut* by *closing* the eyelids; the mouth is *shut* by *closing* the lips. The idea of bringing near or joining is prominent in the signification of *close*; that of fastening or preventing admittance in the word *shut*. By the figure of metonymy, *close* may be often substituted for *shut*; as we may speak of *closing* the eyes or the mouth; *closing* a book or a door in the sense of *shutting*: but they are, notwithstanding, very distinct. Many things are *closed* which are not to be *shut*, and are *shut* which cannot be *closed*. Nothing can be *closed* but what consists of more than one part; nothing can be *shut* but what has or is supposed to have a cavity. A wound is *closed*, but cannot be *shut*; a window or a box is *shut*, but not *closed*. When both are applied to hollow bodies, *close* implies a stopping up of the whole, *shut* an occasional stoppage at the entrance. What is *closed* remains *closed*; what is *shut* may be opened. A hole in a road, or a passage through any place is *closed*; a gate, a window, or a door, is *shut*."

(2) He thus discriminates between to *close*, to *finish*, and to *conclude*: "To *close* is to bring to an end, to *finish* is to make an end: we *close* a thing by ceasing to have anything more to do with it; we *finish* it by really having no more to do to it. We *close* an account with a person with whom we mean to have no farther transactions; we *finish* the business which we have begun. It is sometimes necessary to *close* without *finishing*, but we cannot *finish* without *closing*. The want of time will compel a person to *close* his letter before he has *finished* saying all he wishes. . . . *Close* and *finish* are employed generally, and in the ordinary transactions of life; the former in speaking of times, seasons, periods, &c., the latter with regard to occupations and pursuits; *conclusive* is used particularly on moral and intellectual operations. A reign, an entertainment, an age, a year, may have its *close*; a drawing, an exercise, a piece of work, may be *finished*; a discourse, a story, an affair, a negotiation, may be *concluded*." (*Crabb: Eng. Synon.*)

(3) For the difference between to *close* and to *end*, see END.

II. *Technically:*

1. *Bot.*: Applied to a bird represented with the wings folded closely to the body.

2. *Phonetics*: Applied to a vowel pronounced with a diminished opening of the lips.

¶ Crabb thus distinguishes between the adjectives *close* and *compact*: "Proximity is expressed by both these terms, the former in a general and the latter in a restricted sense. Bodies may be *close* to each other, but a body is *compact* with regard to itself. Contact is essential to constitute *closeness*; but a perfect adhesion of all the parts of a body is essential to produce *compactness*. Lines are close to each other that are separated but by a small space; things are rolled together in a close and compact form that are brought within the smallest possible space." (*Crabb: Eng. Synon.*)

B. *As adverb.*

I. *Of space.*

1. Near, close to, in proximity to.

"Behind her Death

¶ *To keep close to a point*: Not to wander from the matter or subject in question.

¶ Crabb thus distinguishes between *close*, *near*, and *by*: "*Close* is more definite than *near*, which may stand *close* to each other which are not so; men stand *close* when they converse together. *Near* and *night*, which are but variations of each other in etymology, admit of little or no difference in their use, the former however is the most general. People live *near* each other who are in the same street; they live *close* to each other when their houses are adjoining. *Close* is annexed as an adjective; *near* is employed only as an adverb or preposition. We speak of *close* ranks or *close* lines, but not *near* ranks or *near* lines." (*Crabb: Eng. Synon.*)

Music: A method of fingering in lute-playing by which the fingers are removed from the instrument excepting those which it is unavoidable to withdraw. It is called also covert play. (*Barley, Lute Book*; in *Stainer & Barrett.*)

close-quarters, *s. pl.*

Naut.: Certain strong bulkheads or barriers of wood, also called *close-lights*, formerly stretching across a merchant-ship in several places. They were used for retreat and shelter when a ship was boarded by an adversary, and were therefore fitted with loop holes. Powder-chests were also fixed upon the deck, containing missiles which might be fired from the close-quarters upon the boarders. The old slave-ships were thus fitted, in case of the negroes rising, and flat-headed nails were cast along the deck to prevent them walking with bare feet.

At close quarters: In very close proximity, hand-to-hand; with yard-arm touching yard-arm (said of ships of war engaged); in close contact with the enemy.

close reefed, *a.*

Naut.: A term noting that the last reefs of the topsails, or other sails set, have been taken in from stress of weather.

ably long period. The British House of Commons is the model on which all similar deliberative assemblies elsewhere have been formed, yet sooner or later every one of these has found it impossible to carry on the business brought before it unless it has assumed to itself the power of checking when a debate has lasted long enough, and should terminate. Many years went by, and still the good sense and moderation of the successively defeated minorities in the British House of Commons deemed it unnecessary to take any steps for the curtailment of superfluous debate. Not till nearly four fifths of the nineteenth century had run its course, was any serious desire shown on either side of the House to alter this happy state of things. Shortly before that time however, the device of obstructing simply for obstruction's sake began to be cultivated as an art, and was brought in a brief period to such perfection. Day by day time was intentionally wasted by small minorities of the house, and oftener than once when the members wished to go home, a section of the Irish representatives forced upon them "an all-night sitting." New rules were adopted, in 1882, to overcome this difficulty. The first rule gave permission to the Speaker, or to the chairman of a Committee of the whole house, to close debate and go on to vote on a question of which a motion to that effect was carried by a majority, its supporters appeared to amount to 50, or, in the event of the minority being less than 40, to amount to more than 100. These rules were altered in the direction of greater stringency by the Conservatives in 1887. Whatever is under discussion, the usual form for putting the closure now is "that the question be now put," and it is voted upon without debate. The word closure has not been adopted in the Congress of the United States but similar methods of delaying business have long existed, and rules have recently been adopted in the House to overcome them. The old rules exist in the Senate, and obstruction may go on there unchecked.

C. *Technically*:

1. *Botany*: Cloudberry (*Rubus chamæmorus*).

2. *Mythology*:

¶ *Composition of clouds*: A cloud is a mass of vapour condensed into minute drops or vesicles, and differing from fog chiefly in this respect, that fogs occupy the lower whilst clouds float in the upper regions of the atmosphere. Both derive their origin from vapour which rise from the sea, from fresh water, or from the moist earth

¶ *Different kinds of clouds*: In 1803, Mr. Luke Howard divided clouds into four principal kinds, the Cirrus, the Cumulus, the Stratus, and the Nimbus. Two of these are frequently combined, hence he added to the former list of clouds the three following: Cirro-cumulus, Cirro-stratus, and Cumulo-stratus. The Cirrus is a small fibrous or wispike cloud, composed of what are popularly called "Mares' Tails," so high in the heavens that they are probably frozen. Their appearance often precedes a change. The Cumulus, resembling great mountains piled one upon another, is not so high. Several large ones are often seen on a summer morning. If these diminish during the day, the probability is that of fine weather, but if they unite, and become surmounted by Cirri, an indication is of approaching storm. Cumuli in winter are not so frequent or well defined. The Stratus is a large and continuous sheet of dark cloud, seeming to rest on the horizon at sunset, and often vanishing at sunrise. The Stratus is frequent in autumn and early spring. The foregoing three all appear to unite to form the fourth, viz., the Nimbus or rain cloud. Its appearance is well known to all. The Cirro-cumulus is, as its name implies, a combination of the Cumulus and Cirrus. It consists of a series of small masses. The sky covered with these is popularly known as a "Mackerel" sky. It is best seen in warm and dry summer weather. In the Cirro-stratus the Cirri have descended from their airy height and become horizontal. The aspect is like that of sheets of flesh. The Cumulo-stratus is like a cumulus flattened at the top and overhanging its base. Its tendency is to spread, settle down into a stratus, and ultimately disappear in rain.

¶ *Height of clouds in the sky*: The mean height of clouds in winter is from 1,500 to 2,000 yards, and in summer 3,300 to 4,400. Mr. Glaisher observed a cloud in Ethiopia 29,000 yards above the ground; and when Gay Lussac ascended in a balloon to a height of 23,000 yards, there were cirri overhead apparently at a much greater elevation.

(4) *Theories of the formation and suspension of clouds*: According to Hutton, while the temperature of a stratum of air saturated with moisture diminishes in an arithmetical progression the capacity of retaining the moisture in the form of invisible vapour diminishes in a geometrical one: hence, when the temperature of a saturated stratum of air falls, the formerly invisible vapour takes the aspect of a cloud. There are various opinions as to why it floats. Halley and Saussure considered that each vesicle of water in the sky was hollow, and that consequently it floated like a balloon. A more modern view is that the vesicles are carried upwards by ascending currents of air. Clouds also which appear stationary are really descending slowly, but their lower part being dissipated by more heated strata of air, and their upper parts increased by fresh condensation, their descent is disguised so that they appear stationary. (*Ganot: Physics.*)

(5) *Electricity of clouds*: As a rule the clouds are all electrified, some positively and others negatively: in some there is more, in others less, of tension.

I. *Ordinary Language:*

1. A trefoil, especially if used for fodder. [TREFOLIUM.]

2. The name given to various plants more or less resembling the common trefoils.

II. *Technically:*

1. *Agric.:* Many species of clover are native to the United States, and Europe has 20 or more species. Of the several kinds grown, the common red clover (*Trifolium pratense*) is a biennial, and may be sown with barley, oats, or other grain sufficiently advanced in growth not to be suffocated by it. In the second year it gives a full crop.

The white, called also Dutch clover, is a perennial, and is sown with various grasses when it is intended as permanent pasture for sheep. French clover (*Trifolium incarnatum*) is ripened early; it is only an annual. Rye-grass in small quantity is often sown along with clover. A crop of clover, if mown and carried away as hay, so impoverishes the land that it should not be repeated for some years, but if it is eaten off the land by sheep fed on oil-cake it is generally grown every four years. [ROTATION OF CROPS.]

2. *Chem.:* The addition of lime and gypsum to the soil greatly promotes the growth of clover. The ash of clover contains 24·9 potash, 3·0 soda, 12·2 magnesia, 34·9 lime, 7·35 phosphoric acid, 3·7 sulphuric acid, 1·3 silica, 1·5 peroxide of iron, 11·1 chloride of sodium. The dried plants yield 10·58 per cent of ash. Clovers contain about 80 per cent of water.

III. *In special phrases:*

1. *To live in clover:* To live luxuriously.

"Well, Laurent, was the night in clover spent?"
Quell.

2. *To go from clover to rye-grass:* To exchange better for worse. (applied to second marriages).

I. *Literally*:

1. A heavy staff or stick, now generally of wood, thicker at one end than the other, and fitted to be carried in the hand.

"Hamelok hauede with[e] a *clubbe*
Of hise alawen sixti and on sergaunes."
Havelok, 1,927.

2. One of the four suits at cards, representing a trefoil or clover-leaf.

¶ The *same* is a translation of the Span. *bastos* = cudgels or clubs, which is the Spanish name for the suit. The figure by which the clubs are denoted on a card is a trefoil: the Fr. name being *trèfle* = (1) trefoil, (2) a club (at cards). Cf. Dan. *klöver* = (1) clover, (2) a club (at cards); Dut. *klaver* = (1) clover, trefoil, (2) a club (at cards). (*Skeat.*)

3. A round, solid mass; a knot, used of a fashion of dressing the hair.

4. An association or number of persons combined for the promotion of some common object, whether political, social, or otherwise. The use of the word in this sense probably comes from the preceding one (3), as meaning a knot or gathering of men. Another definition, interesting at all events, is suggested by Carlyle in the extract given below.

¶ The earliest London club of any celebrity was established about the beginning of the 17th century, at the Mermaid Tavern, Friday Street. Among its members were Shakespeare, Sir Walter Raleigh, Beaumont, Fletcher, and Selden. Ben Jonson figured at another club, which met at the Devil Tavern, near Temple Bar. Of other clubs, the Literary one, established in the year 1764, had among its members Johnson, Boswell, Burke, and Goldsmith. There are numerous clubs in the cities of the United States, such as social, literary, historical, scientific, military, dramatic, mercantile, agricultural, sporting, political, &c. Some of these were of Colonial origin, and others are based on colonial institutions, but the great majority of them are of recent origin and purpose.

Towards the close of the 18th century, the French political clubs gained world-wide notoriety from the active part which they took in the first French revolution. The most celebrated was the Jacobin Club, founded at Versailles in 1789, and called originally the Breton Club. This and other political French clubs were abolished on September 4th, 1797. They were revived in 1848, but were suppressed again in 1849 and 1850.

"Bodies of Men uniting themselves by a Sacred Vow, 'Gelfilde';—which word and thing have passed over to us in a singularly dwindled condition: 'Club,' we now call it; and the vow, if sacred, does not aim very high."—*Carlyle: Fred. Great*, bk. ii., ch. 4.

5. An association or society of a number of persons for the purpose of providing such of its members as may require it with a temporary residence or resort in a house maintained and reserved for the sole use of such members.

6. The house in which such an association or society of persons meet. [Club-house.]

† 7. The scot, subscription, or share of expense paid or payable by each member of such an association or society.

"A fiddling couple sold ale: their humour was to drink drunk, upon their own liquor; they laid down their *club*, and this they called forcing a trade."—*L'Estrange.*

* II. *Figuratively*:

1. A combination, a union.

"He's bound to vouch them for his own,
Tho' got b' implicite generation,
And general *club* of all the nation."
Hudibras.

2. A clown, a rustic.

Clū-nā-ăc, *a.* & *s.* [Lat. *cluniacensis.*]

A. *As adj.:* Of or pertaining to Cluny, a commune and town of France, in the department of the Saône-et-Loire, 200 miles S.S.E. of Paris, and seat of the monastery described under B.

B. *As subst.:* A monk belonging to the monastery founded at Cluny, or the order which subsequently developed from it. In 910, Guillaume (William) I., Duke of Aquitaine and Count of Auvergne, and Bern or Berno, Abbot of Gigniac, under his auspices, founded in Cluny, then a mere village, an abbey of Benedictine monks. In the 10th century, Odo, a French nobleman, being made Abbot of Cluny about 927, rendered the discipline of the monastery more strict. Many other monasteries followed the example, and the Cluniacensians became celebrated through Europe, and soon acquired great wealth and power. In the 11th century they founded a community or congregation, separate from that of the ordinary Benedictines. In the 12th century they were corrupted by the wealth they had acquired, and their discipline became greatly relaxed.

About 1077 or 1078, William, Earl of Warren, son-in-law of the Conqueror, brought Cluniac monks into England, and erected for them a house at Lewes, in Sussex. In 1525, Cardinal Wolsey dissolved four houses of Cluniacs. The monastery at Cluny itself was three times plundered by the Huguenots, and during the French revolution of 1789 it was almost entirely destroyed.

II. *Technically:*

1. *Vehicles:* A large, close, four-wheeled vehicle, generally constructed to carry four passengers only in the inside, and about twelve outside; used for purposes of state, for pleasure, or for traveling; in this country generally termed a "Tally-ho."

¶ Italy, France, Spain, and Germany all claim the honour of having invented coaches. About 1282, the Queen of Charles of Anjou entered Naples in a *carretta,* which seems, in some respects, to have resembled a modern coach. It is generally believed that the first one used in England was introduced by the Earl of Arundel in 1580. They did not become common till about 1605. In the first half of the century, the greater part of the passenger traffic of this country was conveyed by coaches, and the coaching system had been carried to the very highest state of perfection when it was superseded by railways.

2. *Naut.* (*also written* couch): A sort of chamber or apartment in a large ship of war, just before the great cabin. The floor of it is formed by the aft-most part of the quarter-deck, and the roof of it by the poop; it is generally the habitation of the flag-captain. (*Smith: Sailor's Word-book.*)

"The Levitical priests, in the old law, never arrogated unto themselves any temporal or *coactive* power."—*Raleigh.*

***cō-ăc'-tive** (2), *a.* [Pref. *co* = *con* = with, together, and Eng. *active* (q.v.).] Acting together or in union.

"With what a unreal thou *coactive* art,
And fellow'st nothing . . . ."
Shakesp.: Winter's Tale, i. 2.

***cō-ăc'-tive-ly,** *adv.* [Eng. *coactive* (1); *-ly.*] In a coactive manner, by compulsion or restriction. (*Bp. Bramhall.*)

***cō-ăc-tiv'-i-ty,** *s.* [Eng *coactive*(e) (2); *-ity.*] A working or acting together; unity of action

"... that vital sympathy and *coactivity,* that transmits objects in their exact circumstances to the common perciptent."—*More: Philosophical Writings, Preface.*

cō-ăd-ăp-tā'-tion, *s.* [Pref. *co* = *con* = with, together, and Eng. *adaptation* (q.v.).] Mutual adaptation or suitability.

"... to acquire that perfection of structure and co-*adaptation* which most justly excites our admiration —*Darwin: Origin of Species* (ed. 1859), *Introd.,* p. 3.

cō-ă-dăp'-tĕd, *a.* [Pref. *co* = *con,* and Eng. *adapted* (q.v.).] Adapted to one another; mutually adapted or suited. (*Owen.*)

***cō-ăd-hēr'-ent,** *a.* & *s.* [Pref. *co* = *con,* and Eng. *adherent* (q.v.).]

A. *As adj.:* Clinging together, adhering, adherent

B. *As substantive:*

1. *Ord. Lang.:* An adherent, a supporter.

2. *Ship-building:* The fayed piece called bilge-keel. (*Smyth.*)

†cō-ăd-jā'-cence, *s.* [Pref. *co,* and Eng. *adjacence* (q.v.).] The quality or state of being coadjacent; nearness, closeness of things to each other.

"By similarity, by contrast, by *coadjacence* in space."—*Pop. Exped.* (*Ogilvie.*)

†cō-ăd-jā'-cent, *a.* [Pref. *co,* and Eng. *adjacent* (q.v.).] Mutually adjacent, close to each other.

***cō-ăd'-jū-mĕnt,** *s.* [Pref. *co* = *con;* Lat. *adjumentum,* for *adjumentum* = help; *adjuro* = to help, to aid.] Mutual help or assistance.

cō-ăd-jŭst', *v.t.* [Pref. *co* = *con,* and Eng. *adjust* (q.v.).] To adjust by mutual adaptation.

cō-ăd-jŭs'-tĕd, *pa. par.* or *a.* [Coadjust.]

cō-ăd-jŭst'-mĕnt, *s.* [Eng. *coadjust; -ment.*] The act or process of coadjusting; the state of being mutually adjusted or adapted.

***cō-ăd-jū'-tant,** *a.* & *s.* [Pref. *co* = *con,* and Lat. *adjutans* = helping, assisting.]

A. *As adj.:* Co-operating, assisting.

"Thracius *coadjutant,* and the roar
Of fierce Eurydon."
Philips.

B. *As subst.:* An assistant, a co-operator.

"Oates or some of his *coadjutants.*"—*North: Examen,* p. 292.

***cō-ăd'-jū-tā-tŏr,** *s.* [Pref. *co* = *con,* and Lat. *adjutator* = a helper.] An assistant, a coadjutor.

"I do purpose to act as a *coadjutator* to the law."—*Smollett: Lancelot Greaves,* ch. ii. (*Davies.*)

***co-ad-ju'-ting,** *a.* [Pref. *co* = *con*, and Lat. *adjuto* = to help.] Mutually assisting or aiding; co-operating.

"Those higher hills to view, fair Love that stand,
Her *coadjuting* syringe with much constant behold."
Drayton: Polyolbion, iii.

***co-ad-ju'-tive,** *a.* [Pref. *co* = *con*; Lat. *adjuto* = to help; Eng. suff. *-ive*.] Co-operating, rendering mutual aid.

"There is no mischief we fall into but that we ourselves are at least a *coadjutive* cause."—*Feltham: Resolves*

co-ad-ju'-tor, *s.* [Lat., from *co* = *con*, and *adjuto* = to help, to aid.]

I. *Ordinary Language:*

1. An assistant or helper; a co-operator.

"... my predecessors the pasts, or their records or *coadjutors* the critics."—*Bergson.*

2. One authorised, empowered, or appointed to perform the duties of another

II. *Eccles.* (*Roman Catholic Ch.*): The assistant of a bishop or other prelate, who from age or infirmity is not able fully to do his own duty.

"A bishop that is unprofitable to his diocese ought to be deposed, and no *coadjutor* assigned him."—*Ayliffe.*

¶ Crabb thus distinguishes between a *coadjutor* and an *assistant*: "A *coadjutor* is more noble than an *assistant*: the latter is mostly in a subordinate station, but the former is an equal; the latter performs menial offices in the minor concerns of life, and a subordinate part at all times; the former labours conjointly in some concern of common interest and great importance." (*Crabb: Eng. Synon.*)

co-ad-ju'-tor-ship, *s.* [Eng. *coadjutor*; *-ship.*]

* 1. *Ord. Lang.*: Co-operation; joint assistance.

"I would have tried to fix a day, to meet you at Sir R. W——'s, with his permission and your *coadjutorship*."—*Pope: To Fortescue*, letter. 84.

2. *Eccles.* (*Roman Catholic Ch.*): The position, state, or rank of an assistant to a bishop or other prelate.

***co-ad-ju'-trix, co-ad-ju-trix,** *s.* [Lat. *co* = *con*; *adjutrix* = a female helper.] A female assistant.

"Oh! if I am ever blest with a *co-adjutrix*, a direct-ress let me rather say."—*Colebs*, vol. ii., p. 94.

' Bolingbroke and his *coadjutrix* insinuated that the treasurer was biassed in favour of the dissenters."—*Smollett: Hist. Eng.*, bk. i., ch. ii., § 60. (*Latham.*)

***co-ad-ju-van-cy,** *s.* [COADJUVANT.] Mutual or concurrent help; co-operation; contribution of help. (*Browne.*)

***co-ad-ju-vant,** *s.* & *a.* [Pref. *co* = *con*, and Lat. *adjuvans*, pr. par. of *adjuvo* = to help.]

A. *As substantive:*

Med.: An ingredient in a prescription designed to aid or co-operate with another.

B. *As adj.*: Assisting, helping, co-operating.

co-ad'-nate, † co-ad'-u-nate, *a.* [Lat. *coadunatus* (pa. par. of *coaduno*); from *co* = *con*, and *aduno* = to unite.] [ADUNATION.]

Bot.: United at the base, soldered together. (*Craig.*) The same as CONNATE (q.v.).

¶ Linnæus, in his attempt at a natural system of botanical classification, had an order Coadunatæ, which he made to include the Anona, the Magnolia, Thea, &c.

*** co-ad-u-na'-tion, * co-ad-u-ni'-tion,** *s.* [Pref. *co* = *con*, and Eng. *aduation* (q.v.).] A bringing together of different things so as to form one body; union, consistency.

"They are names of a Church where there is no *co-aduunation*, no authority, no governour."—*Jeremy Taylor: Episcopacy Asserted*, § 8.

"Bodies seem to have an intrinsick principle of, or corruption from, the *coadunation* of particles endued with contrary qualities."—*Hale: Origin of Mankind.*

co-ad'-u-na-tive, *a.* [Eng. *coadunate*, *v.*; *-ive.*] Having the property of combining into one.

*** co-ad-ven'-ture,** *s.* [COADVENTURE, *v.t.*] An adventure in which two or more take a share; a joint risk or venture.

*** co-ad-ven'-ture,** *v.t.* [COADVENTURE, *s.*] To share in a venture or speculation.

"The prince holdeth it no disparagement to *coadventure* and put in his stake with the marchant."—*Howell: Foreign Travel*, viii.

*** co-ad-ven'-tu-rer,** *s.* [Eng. *coadventur(e)*; *-er.*] A fellow-adventurer; one who partakes in the same risk or venture.

"There is a worthy captain in this town, who was *coadventurer* in that expedition."—*Howell: Lett.*, ii. 61.

co-æ'-val, *a.* [COEVAL.]

*** co-af-for-est,** *v.t.* [Pref. *co* = *con*, and Eng. *afforest* (q.v.).] To convert ground into forest, and add it to ground already afforested.

"Henry Fitz Empress (viz., the second) did *co-afforest* much land, . . ."—*Howell: Lett.*, iv 16.

*** co-a-gen-cy,** *s.* [Pref. *co* = *con*, and Eng. *agency* (q.v.).] Joint agency; an acting in common or in partnership.

"Acting as a *co-agency* with unanimous zeal."—*De Quincey: Auteleg, Postcript.*, i. 93. (*Davies.*)

co-a'-gent, *s.* [Pref. *co* = *con*, and Eng. *agent* (q.v.).] An associate; one co-operating with another in any act or work

"... this *coagent* of your mischiefs."
Beaum. & Fl.: Knight of Malta.

*** co-ag'-i-tate,** *v.t.* [Pref. *co* = *con* = with, together, and Eng. *agitate* (q.v.).] To shake, move, or agitate together. (*Blount.*)

*** co-ag-ment,** *v.t.* [Lat. *coagmento* = to join or cement together; from *co* = *con*, and *agmen* = a collected multitude moving forward, *ago* = to drive.] To collect or heap together.

*** co-ag-men-ta'-tion,** *s.* [Lat. *coagmentatio*, from *coagmento* = to join or cement together.] The act of collecting or heaping together; combination, conjunction. (*B. Jons.*)

*** co-ag-ment'-ed,** *pa. par.* & *a.* [COAGMENT.]

*** co-ag-u-la-bil'-i-ty,** *s.* [Eng. *coagulable*; *-ity.*] The quality of being coagulable, or capable of being coagulated.

† co-ag'-u-la-ble, *a.* [Eng. *coagul(ate)*; *-able.*] Capable of being coagulated or concreted.

"An effusion of *coagulable* material."—*Todd & Bowman: Physiol. Anat.*, vol. i., ch. iii., p. 73.

*** co-ag'-u-lant,** *s.* [Lat. *coagulans*, pr. par. of *coagulo* = to coagulate, to concrete.] A substance which coagulates or produces coagulation. (*Dunglison.*)

co-ag'-u-late, *v.t.* & *i.* [Lat. *coagulo*, from *coagulum* = a means of coagulation, from *cogo* (sup. *coactum*) = to drive together; It. *coagulare*, *quagliare*; Sp. *coagular*; Fr. *cogauler* and *cailler*.]

A. *Transitive:*

1. To curd, to clot; to change into a curd-like state.

"The mineral acids have the power of *coagulating* albumen."—*Todd & Bowman: Physiol. Anat.*, vol. i., introd., p. 88.

* 2. To crystallize (*Ogilvie*).

B. *Intransitive:*

1. To congeal, to thicken, to become clotted or curded.

"If the dark rays were absorbed in a high degree by the humours of the eye, the albumen of the humours might *coagulate* along the line of the rays."—*Tyndall: Prog. of Science*, 3rd ed., viii., 9, p. 194.

* 2. To become crystallized.

"Spirit of wine commixed with milk, a third part spirit of wine, and two parts milk, *coagulateth* little, but mingleth; and the spirit swims not above."—*Bacon.*

*** co-ag'-u-late,** *a.* [Lat. *coagulatus*, pa. par. of *coagulo.*] The same as COAGULATED (q.v.).

co-ag'-u-la-ted, *pa. par.* & *a.* [COAGULATE.] Congealed, concreted, curdled.

co-ag'-u-la-ting, *pr. par., a., & s.* [COAGULATE, *v.*]

A. & **B.** *As pr. par. & particip. adj.*: (See the verb).

"So perfect is the *coagulating* power of rennet, that not a particle of caseine in milk submitted to its action will remain *uncoagulated*."—*Todd & Bowman: Physiol. Anat.*, vol. i., ch. i., p. 20.

C. *As subst.*: The act or process of congealing, clotting, or curdling; the state of becoming coagulated.

co-ag-u-la'-tion, *s.* [Lat. *coagulatio*, from *coagulo* = to coagulate.]

1. The act or process of being coagulated, or of changing from a liquid to a curd-like semi-solid state, produced without evaporation and without crystallization. It differs from congelation in not being attended by a fall of temperature in the substance coagulated.

¶ *Coagulation of the blood:*

Anat. & Physiol.: When blood is allowed to stand it emits a "halitus or exhalation, which has a faint smell. In four minutes a film or *crasis* begins commencing at the circumference and gradually spreading to the centre. Two minutes later the lower part of the clot in contact with the vessel, becomes red, and then the whole mass, only about nine minutes being needful for the process from first to last. In about twenty minutes a thin serum begins to exude from it, and goes on to do so for two days. (*Quain.*)

"Acetic acid, which will not precipitate albumen, causes the *coagulation* of caseine." (*Todd & Bowman: Physiol. Anat.*, vol. i., ch. i., p. 20.

"Fibrine is distinguished from the other principles by its remarkable property of spontaneous *coagulation*."—*Todd*, p. 27.

* 2. The process of becoming crystallized.

3. A concretion; a body or substance formed by coagulating.

"As the substance of *coagulations* is saline, nothing dissolves them but what is saline and relishes of the same time."—*Arbuthnot.*

† co-ag'-u-la-tive, *a.* [Lat. *coagulum*, and *-ive.*] Having the power or quality of coagulating, or causing coagulation or concretion; concreting.

"To manifest the *coagulative* power, it curdled in a few minutes in a minute arrested the fluidity of milk, and turned it into a curdled substance.

*** co-ag'-u-la-tor,** *s.* [Eng. *coagulate*; *-or.*] That which coagulates or has the power or quality of coagulating.

"*Coagulators* of the humours, are such as are which expel the most fluid parts."

*** co-ag'-u-la-tor-y,** *a.* [Eng. *coagulate*; *-ory.*] Causing coagulation; coagulating.

"*Coagulatory* effects."—*Ayliffe.*

co-ag'-u-lum, *s.* [Lat.]

I. *Ordinary Language:*

1. A coagulated or concreted mass, &c.

"From the clarified juices of cauliflowers, mangel-wurzel or turnips, a *coagulum* is obtained which cannot be distinguished from the coagulum of serum or the egg."—*Todd & Bowman*, vol. i., ch. i., p. 60.

Any substance or preparation which causes or causes coagulation; a coagulator.

II. *Anat. & Chem.*: A blood-clot, a clot containing albumen, as the white of egg coagulated by heating.

co-ăd', *s.* [Pref. *co* = *con*, and Eng. *aid* (q.v.).] An assistant, one who joins in an act, a co-operator.

"Paris, Deiphobus, Agenor, Jove
(Co-*aids* and captains of the Trojan host)."
Pope: Homer's Il.

co-aï'-ta, *s.* [QUATA.] The Frenchified name of the Quata, a South American monkey, the *Ateles paniscus*, very common in the woods of Surinam and Brazil.

co-aï'-ti, *s.* [COATI.]

*** coak (1),** *s.* [COKE.]

cōak (2), *s.* [Etym. doubtful.]

1. *Carpentry:*

(1) A projection of the nature of a tenon from the general face of a scarf which occupies a recess or mortise in the adjacent part face of the other timber. It is also a tabling, and the mortise is a gain. (*Knight.*)

(2) A joggle or dowel by which two pieces are united to prevent them slipping sideways the other, or to fasten them together.

2. *Mach.*: The hole guarded by the brass sheave through which the pin goes.

3. *Naut.*: A small perforated block with brass inserted into the middle of the sheave (now called *sheave*) of a block, to prevent splitting and galling by the pin as it turns. Called also *bush*, *cock*, and *dowel*. (*Smyth.*)

"*Coaks*, or dowels, &c., are used also in the knees of vessels to prevent their slipping.

cōak, *v.t.* & *i.* [COAK (2), *s.*]

Ship carp.: To perform the process of *coaking* (q.v.)

coak-ing, s. [Coak, v.] Uniting pieces of *spar* by means of tabular projections, formed by cutting away the solid of one piece into a hollow, so as to make a projection in the other fit in correctly; the butts, the pieces from drawing asunder.

coal, * **cosle,** * **col,** * **cole,** * **coole,** * **coyle,** * **coill,** * **coyle,** * **coll** (*pron.*), * **colle,** * **colye** (*pl.*), *s.* & *a.* [A.S. *col*; O. H. Ger. *chol, cholo*; M. H. Ger. *kol*; Ger. *kohle*, Dut. *kool*; Sw. *kol*; Dan. *kul*; L. Ger. *kaal.*]

A. *As substantive:*

I. *Ordinary Language:*

1. Charcoal; a piece of wood or any other combustible, ignited and burning, or charred or extinguished. (Generally qualified by an adjective, as a *live* coal, a *burning* coal, a *dead* coal.)

"Sharp arrows of the mighty, with coals of juniper."
—*Ps.* cxx. 4.

2. In the same sense as II. 1.

¶ *Pit-coal* (Germ. *Steinkohl* = rhone-coal) (*Spenser, Wallis, &c.*); *Sea-coal* (*Shakesp.*); *Ship-coal* (old charters); *Carbo maris, Carbo fossilis, &c.*, used as distinctive terms. [II. 1.]

¶ *To blow a coal:* To fan a quarrel.

"I do believe
You are mine enemy, and make my challenge
You shall not be my judge: for it is you
Have blown this coal betwixt my lord and me;
Which God's dew quench!"
Shakesp.: Hen. VIII., II. 4.

(1) *A small coal to blow at:* A proverbial phrase still commonly used to denote any work not eventually is quite unprofitable. (*Scotch.*)

"If I had no more to look to but your supports, I would have a *cold coal to blow at*."—*M. Bruce's Lectures*, p. 28.

(2) *Precious coals!* An exclamation of surprise. (*Nares.*)

"Let me see how the day goes (hee pulls his watch out): *precious coales*, the time is at hand! . . ."—*Returne from Parnassus* (1606).

(3) *To bring over the coals.* [*To haul over the coals*] (*Scotch*)

"But time that tries such prolicks past,
Brought me out o'er the coals fu' fast."
Forbes: Domestic Depraid, p. 22.

(4) *To carry coals:* To put up with insults, to submit to any degradation. The origin of the phrase is this: that in every family the scullions, the turnspits, the carriers of wood and coals were esteemed the very lowest of menials. The latter in particular were the drudges of all the rest. (*Nares.*)

"Grocery, o' my word, we'll not *carry coals*."—*Shakesp.: Hen. 5 Jul.*, i. 1.

(5) *To carry coals to Newcastle:* To do anything superfluous or unnecessary

(6) *To haul* (or *bring*) *over the coals:* To scold, to call to account.

II. *Technically:*

1. *Min.:* A carbonaceous mineral substance, black, shiny or dull, easily broken, often splintery, inflammable, and used for fuel. It is composed of carbon (75 per cent.), hydrogen, oxygen, and some nitrogen, with silicenus and other earthy impurities (ash). It consists of compressed and chemically altered vegetable matter, chiefly extinct kinds of lycopodiaceous trees. As the successive jungle-growths [Coal-measures] accumulated their stems, leaves, and spores, hydrogen and oxygen were evolved with some of the carbon. The relative proportion of carbon in the mass was increased, the woody fibre reduced in volume to one-ninth, or even one-fifteenth, of its original bulk, and the mass became black, shiny hydrocarbons, with imbedded charcoal ("mother-coal"), due to decomposition of trees lying exposed to the air, or dull black hydrocarbons, resulting from the consolidation of decomposed vegetable pulp, like soft peat.

¶ Dana divides what may be called the species, termed by him Mineral Coal, into the following varieties: (1) Anthracite, (2) Native Coke, (3) Caking Coal, (4) Non-caking Coal, (5) Cannel Coal (Parrot Coal), (6) Torbanite, (7) Brown Coal (Lignite), (8) Earthy Brown Coal, (9) Mineral Charcoal. The first variety has only 3—4½ per cent. of bituminous matter, the second has none, and the rest vary in this respect.

2. *Geol.:* Geologically coal occurs as a stratified rock, interbedded with clays, ironstones, sandstones, and limestones, in what are termed coal-measures. The best coals belong to the Carboniferous series of the Palæozoic system; but much coal of later (Neozoic) ages is found in various parts of the world, though, in that case, either mixed with or passing into lignite, a far less valuable fossil fuel, because little of the hydrogen, oxygen, and nitrogen has been eliminated by chemical change, and thus as much as 90 per cent. of water remains in lignite, while good coal has seldom more than 5 per cent. When lateral pressure has come into operation on the coal-measures, more hydrogen (with some carbon) has been driven off, and the coal metamorphosed into anthracite, which has 90 per cent. of carbon. Some coals have become merely anthracitic. Other coals have had very much carbon ("mother-coal") in them originally. Hence the conditions producing "Steam-coal," that is, either (1) coal good for raising steam quickly, or (2) smokeless coal, suited for steam-ships. According to the decomposition of the vegetable matter, and the resulting combinations of carbon and hydrogen, fossil fuel is more or less bituminous when burnt.

3. *Comm.:* The following are the chief kinds of coal and associated carbonaceous substances used in trade and manufactures:—

(1) Highly bituminous (Gas-coals). Albertite, produced (like rock-oil, &c.) from coal by natural causes; Dysodil or Tasmanite, and "Better-bed" coal, made up of spores; Cannel, Parrot coal, Boghead coal, Torbanite—vegetable matter much altered.

(2) Common bituminous (Household coals), Caking, Coking, Cherry, Splint, and other coals—layers of charcoal ("mother-coal") and hydrocarbon.

(3) Semi-bituminous (Free-burning Steam-coals): (*a*) Charcoal, abundant in original formation; (*b*) Hydrogen and carbon partially lost by chemical changes.

(4) Anthracitic (Steam-coal, &c.): Hydrocarbon nearly all lost by change.

(5) Anthracite: All the hydrocarbon lost by pressure, &c.

(6) Coke: (*a*) Natural, and (*b*) Artificial—hydrocarbon lost by direct heat.

¶ Enormous beds of coal exist in the United States, principally of the bituminous variety, though this country possesses what are probably the largest deposits of anthracite in the world. The entire area of these coal beds is about 200,000 square miles, being 83 times as great as those of the British Islands. The quantity of coal mined in the United States is small in proportion to the size of the beds, but is annually increasing.

A mass of coal when broken splits in three directions: (1) Along the planes of bedding, commonly presenting dull black surfaces which soil the fingers. (2) Vertically across the stratification; the broken surfaces are bright and smooth, and do not soil the fingers; the direction along which these joints run is known as the "face" of the coal. (3) A third set of planes at right angles to both of the other sets, and less perfect, so that the fracture here is more irregular; this direction is called the "end" of the coal. Thus it yields blocks more or less regular in shape, and roughly resembling cubes or dice. (*Huxley: Physiography*, ch. xiv., p. 238, 3rd. ed.)

B. *As adj.:* Consisting of coal; in any way pertaining or relating to coal. (See the compounds.)

¶ Compounds of obvious signification: *Coal-barge, coal-fire, coal-mine, coal-sack, coal-shed.*

coal-backer, s. A man employed to carry coals from a ship to the wagons. (*Mayhew.*)

* **coal-basket,** s. A basket or scuttle for carrying coals.

coal-basin, s

Geol.: A basin-shaped depression with coal-beds deposited in it. It has been almost always produced by subsidence of the strata previous to the deposition of the coal

coal-bed, s.

Geol.: A bed of coal.

coal-black, * **cole-blacke,** * **cole-blak,** a.

1. *Ord. Lang.:* As black as coal; jet-black.

"He hadde a bere a skin *cole-blacke* for old"
Chaucer: C. T., 2,144.

2. *Bot.:* Black a little verging upon blue

coal-boring bit, s. A bit with an entering point and a series of cutting edges of steps of increasing radius (*Knight.*)

* **coal-box,** s. A box for carrying coals to the fire, a coal-scuttle.

coal-brand, s. A name for smut in wheat

coal-brass, s.

Mining: A popular name given to the iron pyrites found in the coal-measures. It contains no brass, but only sulphur and iron. (Iron Pyrites.)

coal-breaker, s. A machine for crushing lump-coal as taken from the mine. Also a building in which coal is broken, sorted and cleaned, usually situated at the mouth of a mine.

coal-breaking, s. & a. (See the compound.)

¶ *Coal-breaking jack:*

Mining: A jack or wooden wedge used for breaking down coal. Jacks are inserted in a small recess in the seam, a few feet of tubing are used to connect this with an adjacent pump, and great pressure being obtained by means of a lever, the coal is brought down in quantities. (*Knight.*)

coal-bunker, s.

Naut.: The closed room around the boiler and engine-room of a steam vessel for keeping the fuel. (*Knight.*)

coal-car, s. A freight-car designed specially for coal; a coal-truck or coal-wagon.

coal-cart, s. A cart used in conveying coals.

coal-chute, s. A spout by which coal in bunkers or elevated boxes is loaded into carts or cars. (*Knight.*)

* **coal-crimp,** s. A factor or middleman who sells ship-loads of coals on commission to wholesale dealers.

coal-cutting, s. & a. (See the compound.)

Coal-cutting machine: A machine for undercutting coal seams in the mine or at the bank.

coal-drop, s. A broad, shallow inclined trough, down which coals are discharged into the hold of a vessel. (*Ogilvie.*)

coal-dumping, s. The act of loading coal or other vessels from a cart. The cart is made to descend by a rail so as to enter the vessel, when it is of course easy to discharge its contents into the hold. (*Knight.*)

coal-dust, s. Small fine coal, the siftings of coal.

"It has been attempted . . . to make the *coal-dust* into bricks which can bear carriage."—*Andrew Short Trip in Hungary and Transylvania*, p. 194.

coal-eyed, a. Black-eyed.

coal-field, s.

1. *Ord. Lang.:* A bed of coal

2. *Ord. Lang. & Geol.:* A district where coal abounds, or which is worked for coal: a number of coal mines worked.

coal-fish, s.

Ichthy.: *Gadus carbonarius*, a native of the Baltic, Northern, and Mediterranean Seas. It is a coarse fish, deriving its name from the dusky pigment which tinges the skin, and which soils the fingers like moist coals. (*Bell.*)

"The *coal-fish* is most decidedly a northern fish, but being a hardy species is not without a considerable range to the southward. It was the only fish found by Lord Mulgrave on the shores of Spitzbergen. This fish has more provincial names than any other species, some of which only refer to it when of a peculiar size. Among the Scotch islands the *coal-fish* is called sillock, piltock, sooth or kuth, harbin, cudden, sethe, sey, and grey-lord. In Edinburgh and about the Forth, the young are called pollocks; at Newcastle the fry are called *coalsey* (*coal-set*), and when twelve inches long poodlers."—*Yarrell: British Fishes.*

coal-fitter, s. A middleman who acts as agent in the sale of coal between the owner of a pit and the shipper.

coal-formation, s.

1. *Geol.:* The same as the Carboniferous formation (q.v.).

2. The same as the COAL-MEASURES.

coal-gas, *s.* A mixture of gases produced by the destructive distillation of coal at regulated temperatures. It is used in lighting streets, houses, &c., and for cooking and heating purposes. Coal-gas is colourless, and has a disagreeable smell. It is purified from H_2S by ferric hydrate, which is moistened with $FeSO_4$ and H_2SO_4 to remove ammonia. The carbon disulphide can be removed by passing it through an iron tube filled with iron turnings and heated to redness. Coal gas consists of a mixture of hydrogen, 40 to 50 per cent., carbon-monoxide about 5 per cent., marsh gas (CH_4) about 40 per cent., which contribute nothing to the illuminating power of the gas; it depends upon the presence of heavy hydro-carbons, principally C_2H_4 ethene, ordinary gas containing about 4 per cent., and cannel gas about 8 per cent. Coal-gas also contains small quantities of acetylene, butylene, &c., and aromatic hydro-carbons, as benzene, &c. The percentage of nitrogen is very variable, and the CO_2 is nearly all removed from gas made in England. When gas is burnt a large quantity of water is formed, hence, if a gas stove is used to dry a room, there must be sufficient ventilation to carry off the aqueous vapour. The sulphur in coal-gas is converted into sulphuric acid when burnt, which greatly damages books, furniture, &c. The escape of coal-gas from pipes into the soil is very injurious to the roots of trees and shrubs. The admixture of a very small quantity of air greatly impairs the illuminating power of coal-gas. Three causes are capable of decreasing the luminosity of flames, viz.: (1) withdrawal of heat, (2) dilution; and (3) oxidation of luminous material. (See FLAME, *Watts: Dict. Chem.*, 3rd Suppt., p. 787.)

coal-gum, *s.* The dust of coal. (*Scotch.*)

coal-head, *s.*

Ornith.: The Cole-tit, or Cole-titmouse, *Parus ater*; also called Coal-mouse (q.v.).

coal-heaver, *s.* A porter employed to carry coal, and especially to discharge it from ships.

"I went to the Jerusalem Coffee House . . . I there saw my captain who looked as much like a captain as he did like a *coal-heaver*."—*Theodora Hook: Gilbert Gurney.*

coal-hough, *s.* A coal-pit. (*Scotch.*)

† **coal-hod,** *s.* A scuttle to hold coals. (*Nuttall.*)

coal-hole, *s.* A hole or cellar where coals and cinders are placed

". . . the types were flung into the *coalhole*, and covered with cinders."—*Macaulay: Hist. Eng.*, ch. xvi.

coal-hood, coally-hood, coal-hoodie, *s.*

Ornithology:

1. A name given to the Bullfinch, *Pyrrhula vulgaris*, from his coal-black hood or cap.

2. The Black-headed Bunting, *Emberiza schœniclus*.

coal-house, *s.* A house in which coals are stored.

"Bonner's convenience made his palace a *coal-house*, and a dungeon."—*Fuller: Ch. Hist. Elizabeth*, p. 312.

coal-man, *s.* A collier.

coal-master, *s.* The proprietor of a colliery; a coal-owner.

coal-measure, *s.*

1. *Ord. Lang.* (*Sing.*): The measure used in ascertaining the quantity of coal.

2. *Geol.* (*Pl.*): Strata of coal with the attendant rocks. If the great Carboniferous formation be separated into three divisions, they in the descending order, are (1) the Coal measures, (2) the Millstone-grit, and (3) the Mountain or Carboniferous Limestone. If by the omission of the Millstone-grit they be reduced to two, then the Coal measures constitute, with the Mountain Limestone already mentioned, the whole Carboniferous formation. In the United States the Coal Measures attain an unusual development, equalled nowhere else in the world. The strata here are divided into two groups. One of these, the Lower or Sub-Carboniferous, corresponds to the Carboniferous limestone of England. The upper groups, comprising the Carboniferous proper, includes the Millstone-grit and the Coal Measures. According to Professor Rogers, the coal-bearing area of North America is approximately as follows:

	Sq. miles.
Rhode Island area	500
Alleghany area	60,000
Michigan area	6,700
Illinois, Indiana, West Kentucky	47,000
Missouri, Iowa, Kansas, Arkansas, Texas	70,000
Nova Scotia and New Brunswick	18,000
Total	200,200

This table does not include the coal fields of the Rocky Mountains and Pacific States, nor those of Vancouver Island, which would add considerably to the sum total. It is worthy of note that Coal Measures have been detected in the Arctic regions, in several localities. The Coal Measures are largely developed in several parts of Europe, in China, and elsewhere. They are large and rich in England, in comparison with the area of the island, and to the coal produced from them is due much of the prosperity of that kingdom. The measures there comprise fresh water beds, including the Upper and the Middle Coal Measures, and Marine Beds, the Gannister Beds or Lower Coal Measures.

"The black shales of the *coal-measures* are here distilled for various mineral oils and paraffin."—*Amateur Short Trip in Hungary and Transylvania*, p. 150.

coal-merchant, *s.* One who trades in coal.

coal-meter, *s.* An official appointed to measure coal.

coal-miner, *s.* One who works in a coal-mine; a collier.

coal-mining, *a.* & *s.*

A. *As adj.:* Adapted for or occupied in mining.

B. *As subst.:* The act or process of mining for coals.

Mining: Coal-beds usually lie at a slight slope, and, when reached from the surface by shafts, are dug out together with sufficient of the upper and under strata to allow of vertical room for the miner. At the foot of the pit long galleries (boards) are cut to the extent of the property, then cross galleries (narrows), marking out square spaces or districts (panels). These are dug away, and the coal picked out and removed; the solid intervals, gradually reduced to walls and pillars, are ultimately removed, wooden props supporting the roof until it is allowed to fall in. This is called the "pillar and stall," or "board and pillar," working, and was invented by Mr Buddle in the beginning of this century. Formerly the coal was removed from the sides of intersecting galleries at the beginning of the mine, or the "rise end" of the seam; and great pillars were left behind comprising nearly sixty per cent. of the coal. Sometimes the hewing is begun at the "rise end" of the "winning," in a gallery all along the edge or face of the coal-seam, which is then cut gradually away, and the roof of the hollow behind is partly supported by stones and timber for roadways, and partly allowed to fall in. This is the "long-way," or "long-wall," plan. The methods and terms vary in different coal-fields. Ventilation is secured by a second shaft (engine-pit or upcast-pit), and by longitudinal divisions (brattices), making double currents, in shafts and galleries; by stoppings and trapdoors regulating the direction of the draught, and by other appliances. Mines are termed "fiery" when carburetted-hydrogen gas issues from the coal. This is frequently continuous; sometimes, when reservoirs are opened, sudden, and then, if the miner has a naked light instead of a Davy or safety lamp, the usual accidents take place.

coal-mouse, colemouse, *s.*

Ornith.: A small species of titmouse, with a black head: the Cole-tit (*Parus ater*).

coal-naphtha, *s.* An oily liquid obtained by the distillation of coal-tar. It is sold as benzole (q.v.). It is purified by agitating with caustic soda to extract the phenol and cresols; then rectified, by which it is separated into a heavy oil containing much naphthalene, and a liquid which is purified by agitation with sulphuric acid and redistilled. By fractional distillation it yields first a mixture of benzene and carbon disulphide, and olefines, &c., at 80° chiefly benzene C_6H_6, about 113° toluene, at 142° [illegible] at 176° impure cumene.

coal oil, *s.* The usual name in this country for PETROLEUM.

***coal-pan, *cole-panne,** *s.* [illegible] or pan for charcoal.

coal-passer, *s.* One who [illegible] supplies coal to the furnace of a steamer.

coal-pipe, *s.*

1. The carbonised bark of a fossil tree.

2. *Mining:*

(1) The cylindrical cast of a tree in solid sandstone, its mass increasing towards the base, and with no [illegible] to support it in its position. When [illegible] of the external layer, which also [illegible] up, is overcome by the force of [illegible] "coal-pipe" falls perpendicularly [illegible] often crushing unhappy miners at [illegible] (*Lyell.*)

(2) A very thin seam of coal.

coal-pit, *s.*

1. A coal-mine; a pit sunk in the [illegible] the purpose of digging out coal. (See MINING.)

"A kind of the polyandry kind. Go and [illegible] of a *coal-pit*."—*Woodward.*

2. A place where charcoal is made [illegible] con.) (*Webster.*)

coal-plants, *s.pl.*

Geol.: Plants, the remains of [illegible] found in the strata of the coal-forma[illegible] from the stems, leaves, roots, &c., [illegible] coal itself has been produced. [illegible] has figured upwards of 300 species, often in a state of high preservation, [illegible] ing the most delicate nervures of [illegible] and cortical markings of the stem, &c.)

¶ Of the most common coal plants [illegible] Stigmaria was conjectured by Prof. [illegible] and Sir William Logan to have [illegible] Sigillaria, and Mr. Binney proved [illegible] roots of that plant by finding the two [illegible] continuity. (*Q. J. Geol. Soc.* II., 1[illegible] p. 370—373.) Mr. Richard Brow[illegible]

coal-rake, * cole-rake, * colrake, *s.* An instrument used for raking out the ashes of a furnace.

"*Ostrale*: ferula, verriculum."—*Cat. A. Anglicum.*

coal-screen, *s.* A sifter for coal. (*Knight.*)

coal-scuttle, *s.* A box or utensil for holding coals for present use.

Coal-scuttle bonnet: A bonnet so called from its resembling a coal-scuttle in shape.

"Glancing from the depths of her *coal scuttle bonnet*."—*Dickens: Nich. Nickleby*, ch. xxiii.

coal shaft, *s.* The shaft forming the entrance to a coal-mine. [SHAFT.]

coal-ship, *s.* A ship employed in carrying coal; a collier.

"The pirate never spends his shot upon *coal ships* but lets fly at the rich merchant."—*Sandys: Rem. Negros*, p. 110.

coal-slack, *s.* Dust or grime of coal; fine coal.

coal-smut, *s.* The same as COAL-SLACK (q.v.).

coal-stalk, *s.*

1. A name given to the vegetable impressions found on stones in coal-mines. (*Scouler.*)

"These impressions abound in coal countries; and are in many places, and improperly known by the name of *Coal stalk*."—*Ure: Hist. Rutherglen*, p. 102.

2. Extended, in its application, to the effects of recent vegetation.

coal-stone, *s.* Anthracite (q.v.)

"*Coal-stone* flames easily, and burns freely; but holds and endures the fire much longer than coal."—[illegible]

coal-tar, *s.* Tar produced in the destructive distillation of bituminous coal. It is a thick, sticky, dark-coloured substance, and is used in the manufacture of printer's ink, for asphalt pavements, coating ships, &c. The composition of coal-tar varies according to the temperature at which the coal is distilled, the higher the temperature the larger being the yield of solid bodies. Coal-tar when distilled first gives off gas, then water containing ammoniacal salts, then a brown light oil which, when purified, is called coal-naphtha (q.v.); at higher temperatures a yellow, heavy, fœtid oil called dead-oil (q.v.), or kreasote oil, then naphthalene (q.v.); afterwards the black residue in the retort solidifies on cooling and forms pitch, which is used to form asphalt, and a black varnish to protect iron from rust. If the distillation is continued the pitch yields a yellow substance like butter, containing anthracene, phenanthrene, fluorene, &c.; afterwards, at red heat, a bright orange powder, consisting chiefly of pyrene $C_{16}H_{10}$ and chrysene $C_{18}H_{12}$; the residue forms a hard, porous coke.

Coal-tar colours: Dyes prepared from aniline (q.v.), naphthalene, phenol (q.v.), and other compounds contained in coal-tar.

coal-tit, *s.*

Ornith.: A species of titmouse (*Parus ater*), also called *coal-head* and *coal-mouse* (q.v.).

coal-tongs, *s.pl.* A pair of tongs for grasping coal in lumps.

coal-trimmer, *s.* One who is employed to trim and stow the coal for the fires of marine steam-engines.

coal-under-candlestick, *s.* A Christmas game mentioned in the "Declaration of Popish Impostures," 1603. (*Nares.*)

coal-viewer, *s.* An overseer or superintendent of a coal-mine.

coal washer, *s.* A machine in which coal which has been broken and assorted is finally washed. (*Knight.*)

coal whipper, *s.* One who raises coal out of the hold of a ship.

"Here were colliers by the score and score with the coal-whippers."—*Pinkerton*

coal-whipping, *s.* The act or occupation of raising coals from the holds of ships.

coal-working, *s.* A place where coal is worked; a coal-mine, a colliery.

"At last we reached the *coal workings*." *Anstead Short Trip in Holland and Transylvania*, p. 104.

coal-wurkes, *s.* A colliery, with the necessary machinery appertaining to it.

"There is a vast treasure in the old English, from whence authors may draw coming[?] supplies; as coal miners make their surest rounds from the *coal work* and the mines."—*Fuller.*

coal-yard, *s.* An enclosure set apart for the deposit of sale of coal.

cōal, *v.t. & i.* [COAL, *s.*]

A. *Transitive*:

* **1.** To burn, char, or reduce to charcoal.

"In finishing [the coal] when it is coaled."—*Sloane: Survey of Scotland.*

2. To supply with coal.

"A steam-vessel is said to be *coaled* when she has received on board the necessary fuel for any voyage."—*Young: Nautical Diet.*

* **3.** To write, mark, or delineate with charcoal.

"Marvailing, he *coaled* out rhimes upon the wall, near to the picture."—*Camden.*

B. *Intrans.*: To take in a supply of coals.

"A good pier has lately been built, alongside of which vessels may lie and *coal* with great facility." *Mackenzie: British Columbia and Vancouver's Island*, [illegible]

* **cōal'-ēr-ȳ,** *s.* [Eng. *coal*; *-ery.*] A coal-pit, a coal-mine now superseded by *colliery* (q.v.)

"Two fine stalactites were found hanging from a black stone, at a deserted vault in Benwell *colliery*."—*Wonderful.*

cō-ą-lēs'ce, *v.i. & t.* [Lat. *coalesco* = to grow together, to coalesce, to unite: *co* = *con*; *alesco* (incept. of *alo*) = to nourish.]

A. *Intransitive*:

I. *Lit.*: To grow together; to unite in masses or groups spontaneously.

"When vapours are raised, they hinder not the transparency of the air, being divided into parts too small to cause any reflection in their superficies; but when they begin to *coalesce*, and constitute globules, those globules become of a convenient size to reflect some colours."—*Newton.*

II. *Figuratively*:

1. To combine, to join, to agree.

"Mathematics and physics have been long accustomed to *coalesce*."—*Tyndall: Progs. of Science*, 3rd ed., vol. vi., p. 116.

2. To join a party, to become one of a party

"He had imagined that, as soon as he chose to *coalesce* with those to whom he had recently been opposed, all his followers would imitate his example."—*Macaulay: Hist. Eng.*, ch. xvi

3. To unite in society in a more general sense; to become incorporated with.

"The Jews were incapable of *coalescing* with other nations."—*Campbell.*

B. *Trans.*: To cause to unite or join.

¶ Crabb thus distinguishes between to *add*, to *join*, to *unite*, and to *coalesce*: "We *add* by putting a part to any body so as to form a whole; we *join* by attaching two whole bodies to each other; we *unite* by putting two bodies to or into one another, so that they become one body; things *coalesce* when their parts mingle together so as to form one substance. . . . *Adding* is opposed to subtracting or diminishing; *joining* to separating, *uniting* to dividing, and *coalescing* to falling asunder." (*Crabb: Eng. Synon.*)

cō-ą-lēs'çed, *pa. par.* or *a.* [COALESCE, *v.*]

cō-ą-lēs'çence, *s.* [Lat. *coalescens*, pr. par. of *coalesco* = to coalesce, to unite.] The act or process of coalescing or combining; union, concretion, combination.

"Like that of salts with lemon-juice.
Which does not yet like that produce
A friendly *coalescence*."
Cowper: Friendship.

* **cō-ą-lēs'-çen-çȳ,** *s.* [Eng. *coalescence*; *-y.*] The same as COALESCENCE (q.v.).

By a happy diffusion and holy *coalescency*."—*Gunton: Fears of the Church*, p. 36 (*Davies*).

† **cō-ą-lēs'çent,** *a. & s.* [Lat. *coalescens*, pr. par. of *coalesco* = to coalesce, to unite.]

A. *As adj.*: Growing together, uniting, combining, coalescing.

"The human and divine nature of Christ being *coalescent* into one person."—*Anson. on Glanville's Last Orient.*, 1663, p. 152.

B. *As subst.*: One who or that which coalesces.

cō-ą-lēs'çing, *pr. par., a., & s.* [COALESCE.]

A. & **B.** *As pr. par. & particip. adj.*: (See the verb)

C. *As subst.*: The act of combining or growing together, coalescence.

* **cōal'-i-ēr,** * **cōall'-i-ēr,** *s.* [COLLIER.]

* **cōal'-ing,** *pr. par., a., & s.* [COAL, *s.*]

A. & **B.** *As pr. par. & particip. adj.*: (See the verb).

C. *As substantive*:

1. The act of supplying or providing with coals.

2. The act of taking in a supply of coals.

* **coalise,** *v.t.* [COALESCE.]

"[illegible] will lead *coalised* armies."—*Carlyle: Fr. Rev.*, pt. iii., bk. ii., ch. i.

* **cō'-ą-līte,** *v.t. & i.* [Lat. *coalitum*, sup. of *coalesco* = to coalesce, to unite.]

A. *Intrans.*: To unite, to coalesce

"Let the friends of liberty lay aside the groundless distinctions which are employed to amuse and to keep them; let them continue to *coalite*."—*Bolingbroke to Sir Patriot*, Let. 19

B. *Trans.*: To unite, to cause to coalesce.

"Time has by degrees in all other places and persons blended and *coalited* the conquered with the conquerors."—*Burke: To Sir H. Langrishe*

cō-ą-lī'-tion, *s.* [Fr. *coalition*; Low Lat. *coalitio*, from *coalitum*, sup. of *coalesco* = to coalesce, to unite.]

1. *Ord. Lang.*: A union or coalescing of separate bodies into one body or mass.

"The world is a mass of heterogeneous consistencies, and every part thereof a *coalition* of distinguishable variation."—*Urquhart.*

2. *Polit.*: A combination for temporary purposes of persons, parties, or states having different interests.

¶ The administration of the Duke of Portland, which commenced on April 2, 1783, and that of the Earl of Aberdeen, which began in December, 1852, were coalition Ministries.

". . . the only effect of a *coalition* between them must have been that one of them would have become the tool of the other."—*Macaulay: Hist. Eng.*, ch. xiii

* **cō-ą-lī'-tion-ēr,** *s.* [Eng. *coalition*; *-er.*] The same as *coalitionist* (q.v.). (*Byron.*)

cō-ą-lī'-tion-ist, *s.* [Eng *coalition*; *-ist.*] One who promotes or joins a coalition.

† **cōal'-lēss,** *a.* [Eng. *coal*; *-less.*] Wanting or destitute of coal

* **cō-ą-lī'-tion,** *pa. par.* or *a.* [COALLY, *v.*]

* **cō-ą-lȳ',** *v.t.* [Pref. *co* = *con*, and Eng. *ally*, *v.* (q.v.).] To join or associate together.

"such civil a unity can never secretly or honorably act with a total disunion and to that *co-allied* religion."—*Warburton: Divine Leg.*: Index.

* **cō-ą-lȳ',** *s.* [Pref. *co* = *con*; *ally*, *s.* (q.v.)] An ally, a co-operator, an assistant.

cōal'-sȳ, *s.* [Eng. *coal*, and Sc. *sey* = coal-fish. (*Jamieson.*)] The coal-fish (q.v.). In some places the name is restricted to the fry.

cōal'-ȳ, *a.* [Eng. *coal*; *-y.*]

1. Of or pertaining to coal, of the nature of or resembling coal.

2. Full of or discoloured by coal; black.

"Or rocky Avon, or of sedgy Lee.
Or *coaly* Tyne, or ancient hallowed Dee."
Milton: Vacation Exercise.

cōam'-ings, *s. pl.* [COMMISS.]

Naut.: Certain raised work, rather higher than the decks, about the edges of the hatch-openings of a ship, to prevent the water on deck from running down. (*Smyth.*)

". . . I threw my legs over the *coamings* . . ."—*Daily Telegraph*, Jan. 29, 1881

* **cō-ąn-nēx',** *v.t.* [Pref. *co* = *con*, and Eng. *annex* (q.v.).] To annex with or attach to something else.

* **coap,** *s.* [COPE.]

1. *Chem.:* A metallic element, atomic weight 59, symbol Co. The metal was first obtained in an impure state by Brandt, in 1733. It occurs as speiss cobalt, or tin-white cobalt $CoAs_2$, and cobalt-glance $CoAsS$. Cobalt occurs in meteoric iron. The ore is first roasted to expel the arsenic, then dissolved in aqua regia, the excess of acid evaporated off, H_2S is then passed through the solution to precipitate copper, bismuth, and the remainder of the arsenic; the filtered liquid is boiled to expel the excess of H_2S, boiled with HNO_3 to convert the iron into a ferric salt; it is then supersaturated with ammonia, which precipitates the iron as $Fe_2(HO)_6$, and the cobalt and nickel remain in solution. Cobalt can be separated from nickel by Rose's process. The solution of the mixed oxides is dissolved in HCl; the solution is diluted with much water, and supersaturated with chlorine gas, which converts the cobaltous chloride $CoCl_2$ into cobaltic chloride Co_2Cl_6, while the nickel is unaltered; excess of barium carbonate $BaCO_3$ is then added, and left to stand for eighteen hours, when the cobaltic oxide is precipitated; the nickel remains in solution. The precipitate is dissolved in boiling HCl, and Na_2SO_3 is added to precipitate the barium as $BaSO_4$, and the cobalt is then precipitated as $Co(HO)_3$ by caustic soda. The metal is obtained by heating cobaltous oxalate in a covered crucible. Metallic cobalt is a hard, magnetic, ductile, reddish-grey metal, with a high melting point. Its sp. gr. is 8·9. It is not easily oxidised by the air, when pure. It is dissolved by dilute HCl or H_2SO_4 with evolution of hydrogen. Cobalt forms two oxides, Cobaltous oxide CoO and Cobaltic oxide Co_2O_3 (q.v.). The alloys of cobalt are unimportant. Zaffre is an impure oxide of cobalt prepared by roasting cobalt ores with twice their weight of sand. Smalt is prepared by fusing partially roasted cobalt ores with a mixture of powdered quartz and potassium carbonate; while hot it is poured into water and then ground to a fine powder. It is used as a pigment; this colour was known to the ancients. The cobaltous salts are the most stable in which cobalt acts as a dyad element. Cobalt compounds give a blue colour to a borax bead.

2. *Min.:* There is no native cobalt known, but many ores of the metal. *Arsenate of Cobalt* = Erythrite; *Arsenical Cobalt* = Smaltite; *Black Cobalt* = Asbolite; *Bright-white cobalt* = Cobalt-glance; *Carbonate of Cobalt* = Remingtonite; *Earthy Cobalt* = Asbolite; *Grey Cobalt* = Smaltite; *Red Cobalt* = Erythrite; *Sulphate of Cobalt* = Bieberite; *Sulphuret of Cobalt* = Syepoorite, Linnæite; *White Cobalt* = Smaltite; *Cobalt and Lead Selenite* = Tilkerodite.

¶ *Cobalt-Ammonia compounds ; Cobalt Bases : Chemistry :*

(1) Ammonia cobaltous salts are formed by the union of cobaltous salts with ammonia in excess, the air being excluded, as, $CoCl_2{\cdot}6NH_3$, rose-coloured crystals.

(2) Ammonia cobaltic salts are formed when an ammoniacal solution of cobalt is exposed to the air, as—Tetrammonio-cobaltic salts, as $Co_2Cl_6{\cdot}4NH_3$. Hexammonio-cobaltic salts, as $Co_2Cl_6{\cdot}6NH_3$. Oxy-octammonia-cobaltic (fusco-cobaltic) salts, as $Co_2OCl_4{\cdot}8NH_3$. Decammonio-cobaltic (rosseo- and purpureo-cobaltic) salts, as $Co_2Cl_6{\cdot}10NH_3$. Dinitro-decammonio-cobaltic (xantho-cobaltic) salts, $Co_2(NO_2)_2Cl_4{\cdot}10NH_3$. Dodecammonio-cobaltic (luteo-cobaltic) salts, $Co_2Cl_6{\cdot}12NH_3$. (For preparation and properties of these compounds see *Watts's Dict. Chem.*, and *Suppls.*)

cobalt arseniate, *s.*

Min.: The same as ERYTHRINE.

cobalt arsenide, *s.*

Min.: The same as SMALTITE. (*Brit. Mus. Cat.*)

cobalt-bloom, *s.*

Min.: Acicular arsenate of copper. The same as ERYTHRINE (*Brit. Mus. Cat.*), or ERYTHRITE (*Dana*).

cobalt blue, *s.* Also called COBALT-ULTRAMARINE. A fine blue pigment prepared by adding an alkaline carbonate to a solution of pure alum mixed with pure cobalt salt. The precipitate is washed and ignited. It is a compound of oxides of aluminium and cobalt. *Thénard's blue* is prepared by heating in a closed vessel freshly precipitated phosphate of cobalt, with five times its bulk of gelatinous aluminium hydrate $Al_2(HO)_6$, and heating the mixed precipitates in a closed vessel. The presence of iron or nickel gives these pigments a greenish tint.

cobalt-crust, *s.* Earthy arsenate of copper.

cobalt-glance, *s.*

Min.: An isometric brittle mineral, with cubic cleavage, occurring also massive. The hardness is 5·5, the sp. gr. 6—6·3 ; the lustre is metallic ; the colour silver-white, inclining to red, steel-grey with a violet tinge, or greyish-black, the streak being of the last-named hue. Compos.: Sulphur, 19·06 to 20·86 ; arsenic, 42·53—44·75 ; cobalt, 8·67—35·10 ; and iron, 1·63—24·99. Dana makes two varieties, (1) the ordinary, and (2) ferriferous. [FERROCOBALTITE.] It is found in Cornwall, in Sweden, Norway, &c. In the British Museum Catalogue cobalt-glance figures as the accepted name of the mineral described by Dana as Cobaltite. (*Brit. Mus. Cat. of Min.* ; also *Dana : Min.*)

cobalt-green, *s.* A permanent green pigment prepared by precipitating a mixture of sulphates of cobalt and zinc, by carbonate of sodium, washing and igniting the precipitate. Also called Rinman's green.

cobalt-hygrometer, *s.* A hygrometer, made by dipping unsized paper into a solution of cobaltous chloride, sodium chloride, and a little gum-arabic. It is slightly hygroscopic, and will absorb the moisture from the atmosphere. It changes colour as follows :—Rose-red indicates rain ; pink, very damp ; bluish pink, moist ; lavender, slightly damp ; violet, dry ; blue, very dry. It may also be used to test whether a room, &c., is damp. Artificial flowers are often dipped in this solution.

cobalt-manganese, *s.*

¶ *Cobalt-manganese spar :*

Min.: The same as RHODOCHROSITE (q.v.).

cobalt nickel, *s.*

¶ *Cobalt-nickel pyrites :*

Min.: The same as LINNÆITE.

cobalt-ochre, *s.*

Min.: The red variety is the same as ERYTHRITE ; the black one as asbolite, the latter a variety of wad. (*Dana.*) The same as WAD. (*Brit. Mus. Cat.*)

cobalt-pyrites, *s.*

Min.: The same as LINNÆITE.

cobalt sulphate, *s.*

Min.: The same as BIEBERITE.

cobalt sulphide, *s.*

Min.: The same as COBALT-GLANCE (q.v.).

cobalt-ultramarine, *s.* [See COBALT-BLUE.]

cobalt-vitriol, *s.*

Min.: The same as BIEBERITE.

cobalt-yellow, *s.* A beautiful permanent yellow pigment prepared by gradually adding a concentrated solution of potassium nitrite KNO_2 to an acid solution of cobalt nitrate. Its composition varies.

cō-bal'-tic, *a.* [From Eng., &c. *cobalt* ; *-ic.*] Having more or less of cobalt in its composition ; pertaining to cobalt.

cobaltic oxide, *s.*

Chem.: Cobaltic oxide, or sesquioxide of cobalt, Co_2O_3, is obtained as a black hydrate $Co_2(OH)_6$ by suspending cobaltous oxide in a solution of potassium hydrate and passing a stream of chlorine gas through the liquid. It is rendered anhydrous by a gentle heat. At higher temperatures it is converted into a black oxide Co_3O_4, which is insoluble in aqua regia. It is used as a pigment in enamel painting.

cobaltic salts, *s. pl.*

Chem.: Cobaltic salts are prepared by dissolving cobaltic oxide in acids. They are not important, and easily decompose. Cobalt acts as a tetrad in these compounds, the two atoms of Co being united to each other by one pair of bonds.

cō-bal-ti-cy-an-ide, *s.* [Eng., &c. *cobalt* ; *-i* connective ; and *cyanide.*] [COBALTICYANOGEN.]

Chem.: Cobalticyanide of potassium $K_6Co_2(CN)_{12}$ is obtained by dissolving cobaltous cyanide $Co(CN)_2$ in excess of potassium cyanide KCN and boiling it for some time. Cobalticyanide of potassium crystallises in anhydrous flattened yellow prisms, which are soluble in water ; it is not decomposed by dilute acids. It gives precipitates with most metallic salts. Cobalticyanide of cobalt is light red ; of nickel, a light green-blue ; copper sky-blue ; ferrous, mercurous, manganous, silver, zinc, and stannous, white. Cobalticyanides of lead, ferric and mercuric, are soluble in water. Cobalticyanide of hydrogen or hydrocobaltic acid $H_6Co_2(CN)_{12}$ is obtained by decomposing the copper salt by H_2S. It crystallises in colourless deliquescent needles ; its aqueous solution is not decomposed by boiling. No corresponding nickel compound has been formed, the double cyanide of nickel and potassium being decomposed by HCl.

cō-bal-ti-cy-an-ō-gĕn, *s.* [Eng., &c. *cobalt* ; *-i* connective ; and *cyanogen.*] A radical contained in cobalticyanides.

cō-bal'-tine, *s.* [Eng. *cobalt* ; *-ine* (*Min.*).] The same as COBALT-GLANCE (q.v.).

cō-bal-tite, *s.* [Eng. &c. *cobalt*, and suff. *-ite* (*Min.*) (q.v.).]

Min.: Dana's name for a mineral, the same as COBALT-GLANCE (q.v.) ; see also COBALTINE.

cō-bal-tō, *in compos.* [Eng. &c. *cobalt*, and *o* connective.]

cobalto cyanide, *s.* [COBALTO-CYANIDE OF POTASSIUM.]

Cobalto-cyanide of potassium

Chem.: $K_3Co'CN_6$, a red, deliquescent, easily decomposed substance. It can be formed by the reduction of cobaltic cyanide of potassium. (See *Watts : Dict. Chem.*)

cobalto-cyanogen, *s.* A radical contained in cobalto-cyanides.

cō'-bal-tous, *a.* [Eng. *cobalt*, and suff. *-ous.*] [COBALT.]

Chem.: Belonging to cobalt

cobaltous chloride, *s.*

Chem.: $CoCl_2$. Obtained as a blue anhydrous volatile substance by passing chlorine over metallic cobalt, also in solution by dissolving cobaltous oxide CoO in HCl, its solution is pink, but when concentrated it turns blue. It is used as a sympathetic ink, the writing becoming blue on the paper being exposed to heat, and fading away on absorbing moisture from the air.

cobaltous nitrate, *s.*

Chem.: $Co(NO_3)_2{\cdot}6H_2O$. Prepared by dissolving CoO in nitric acid ; a red crystalline deliquescent salt, used in blowpipe reactions.

cobaltous oxide, *s.*

Chem.: CoO, obtained by igniting the hydrate $Co(OH)_2$, or the carbonate $CoCO_3$, out of contact with the air. It is a greenish-grey powder which, when heated in the air, takes up oxygen and is converted into a black mixed oxide Co_3O_4, which at a stronger heat gives off oxygen. It is used in preparing blue pigments for china painting.

cobaltous salts, *s. pl.*

Chem : Cobaltous salts are precipitated by sulphide of ammonium as CoS (see analysis), and can be separated from other sulphides of this group, except nickel sulphide, by the insolubility of CoS in dilute HCl. Potash precipitates a blue basic salt, which turns green on exposure to the air ; on heating the precipitate it is converted into the red hydrate $Co(HO)_2$, which is insoluble in excess of RHO, but soluble in ammonia, forming a red brown solution. Small quantities of cobalt salts can be detected by adding cyanide of potassium in excess, then nitrite of potassium, and afterwards acidifying with acetic acid, an intense red cherry juice coloured liquid is formed. Cobalt salts give a blue colour to a borax bead.

cobaltous sulphate, *s.*

Chem.: $CoSO_4{\cdot}7H_2O$. Cobalt vitriol, obtained by dissolving CoO in H_2SO_4. It crystallises in red rhombic prisms isomorphous with magnesium sulphate. It forms double salts.

Zool.: A species of snake, the *Coluber Naja* of Linnæus, now called *Naja* or *Naia tripudians*. It belongs to the family Viperidæ. The head has nine plates behind and is broad, the neck is very expansile, covering the head like a hood, the tail round. The colour is brown above and bluish-white beneath. When the disc is dilated the hinder part of it exhibits dark markings like a pair of spectacles reversed, or rather a pair of barnacles,

COBRA.

whence it is sometimes called the Spectacle Snake. The common name is, however, the Portuguese one, *Cobra*, *Cobra capella*, *Cobra de* or *di capello*, borrowed from our predecessors in India. The Hindoos call it Nag, a word which occurs in Nagpore, a city formerly the capital of the Bhonsla dynasty of Mahrattas in Central India. It is from two to four or even six feet long, is common in India, and is so venomous that it causes the death of more people than does the tiger. Notwithstanding this, it is kept in various temples, fed with milk and sugar, and worshipped. Many cobras are killed and eaten by a small mammal, one of the Viverridæ, *Herpestis griseus*, called in India the Mungoos

cobra-mœil, *s.*

Zool.: *Dabaia russellii*, from the East Indies. Called also Russell's Viper. [Ticholonga.]

cobra poison, *s.*

Chem.: The poison of the Cobra de Capello (*Naja tripudians*) may be obtained by pressing the parotid glands of the snake while its fangs are erected. It has been examined by A. Pedler and by A. W. Blyth. It is an amber coloured, syrupy frothy liquid. Sp. gr. 1·096. It has a feeble acid reaction. The cobra poison contains albumen, a minute trace of fat, and a crystalline body called Cobric acid (q.v.). It dries up, on exposure to the air, to a yellow acrid pungent powder.

cō'-brĕs, *s.* [Sp.]

Comm.: A superior kind of indigo, prepared in South America.

cō'-bric, *a.* [Eng. *cobr(a)*; *-ic.*] Pertaining to, or derived from, the cobra.

cobric acid, *s.*

Chem.: An acid obtained by dissolving the yellow powder (Cobra poison) in water and coagulating the albumen by alcohol, filtering, the alcohol evaporated off at a gentle heat, the liquid concentrated to a small bulk and precipitated by basic acetate of lead; the precipitate is washed, and decomposed by H_2S, filtering off the lead sulphide, and evaporating. Cobric acid crystallises in needles, which are deadly poisonous. It forms also 10 per cent. of the snake poison. It forms a platinum salt, having the composition $(C_{17}H_{29}N_4O_7{\cdot}HCl)_2\,PtCl_4$. The platinum salt is much less poisonous. The addition of potassium permanganate is said to destroy the physiological activity of the poison.

cō'-brĭ-form, *a.* [Eng. *cobr(a)*, and *form.*] Resembling or connected with the cobra, having the poison-fangs erected.

cŏb'-stōne, *s.* [Eng. *cob*, and *stone.*] A rounded stone, a cobble or cobble-stone.

***cŏb-swăn,** *s.* [Eng. *cob*, and *swan.*] The head or leading swan; a male swan.

"I am not taken
With a cobswan, or a high-mounting bull,
As foolish Ledа and Europa were."
Ben Jonson: Cynthia, ii. 1.

cō'-bûrg, cō'-bŏorg, *s.* [From *Coburg*, in Germany.]

Fabric: A thin material of worsted and cotton, or worsted and silk, twilled on one side, for ladies' dresses; intended as a substitute for merino. (*Ogilvie.*)

cō-bûr-gĭa-ą, *s.* [Named after the Prince of Saxe-Coburg, afterwards King of the Belgians.]

Bot.: A genus of Amaryllidaceæ. It consists of handsome plants from South America, with scarlet, vermilion, or orange-red flowers.

cŏb'-wĕb, *cop-webbe, *s.* & *a.* [Either from Wel. *cob* = a spider, and Eng. *web*; or a shortened form of *attercop-web*, from Mid. Eng. *atterop* = a spider. (*Skeat.*)] [ATTERCOPPE.]

A. *As substantive:*

I. *Lit.:* The web or net of a spider.

***II.** *Figuratively:*

1. Any trap or snare; especially such as may be calculated or likely to catch the inexperienced or unwary.

"I cannot but lament thy splendid wit
Entangled in the cobwebs of the schools."
Cowper: The Task, bk. iv.

2. Anything light and worthless.

3. Anything that tends to overcloud or confuse the mind, as cobwebs do the outline of a room.

***B.** *As adj.:* Light, thin, flimsy, or worthless, with the implied idea of ensnaring or entrapping; deceitful.

"Break through such tender *cobweb* niceties,
That oft entangle those blind buzzing flies."
More: Philos. Poems, p. 329.

***cobweb-lawn,** *s.* A kind of very fine transparent lawn.

"Item, a charm surrounding fearfully
Your partie-per-pale picture one half drawn
In solemn cypress, th' other *cobweb lawn.*"
B. Jonson: Epig.

***cobweb-learning,** *s.* Light, worthless learning.

"... all other knowledge is but *cobweb-learning.*"—*Bacon: Letters.*

cobweb micrometer, *s.* A micrometer (q.v.) in which cobweb threads are used.

cŏb'-wĕbbed, *a.* [Eng. *cobweb*; *-ed.*]

1. *Ord. Lang.:* Covered with or full of cobwebs.

"The *cobwebb'd* cottage, with its ragged wall
Of mouldering mud, is royalty to me."
Young: Night Thoughts, i.

2. *Bot.* (*applied to leaves, peduncles, &c.*): Covered with a thick interwoven pubescence, consisting of thin hairs like the web of a spider; arachnoid.

†cŏb'-wĕb bär-ỹ, *a.* [Eng. *cobweb*; *-ery.*] Flimsy, cobwebby argument.

"Logical *cobwebbery* shrinks itself together."—*Carlyle: French Rev.*, pt. ii., bk. i., ch. 2.

†cŏb'-wĕb bỹ, *a.* [Eng. *cobweb*; *-y.*]

I. *Literally:*

1. Of the nature of or resembling a cobweb.

2. Covered with cobwebs; cobwebbed.

II. *Fig.:* Flimsy, light, or worthless.

cŏb'-wŏrm, *s.* [Eng. *cob*, and *worm.*] The name given by farmers to the larva of the Cockchafer (*Melolontha vulgaris*).

***coc (I),** *s.* [COCK.]

***coc (II),** *s.* [COOK.]

cō-ca, *s.* [Sp.]

Bot. & Pharm.: The dried leaf of *Erythroxylon Coca*, a shrub, 4—8 feet high, growing wild in Peru, and cultivated there on the Andes, between 2,000 and 5,000 feet high. It constitutes a stimulant which tends to enslave those who use it to a greater extent, it is said, than opium in China or strong liquor here. It is used chiefly by the Peruvian miners, who chew its leaves mixed with the ashes of *Chenopodium quinoa.* It is said to give them great power of enduring fatigue on a scanty supply of food; thirty million pounds of the dried leaves are consumed annually. The leaves contain an alkaloid Cocaine (q.v.), a variety of tannic acid, and a waxy substance called Cocawax $C_{32}H_{66}O_2$, which melts at 70°.

Cō-âgûe (*g* silent), *s.* [COCHAYNE.]

cō'-eą-ine, *s.* [Sp. *coca*; and suff. *-ine.*]

Chem.: An alkaloid, $C_{17}H_{21}NO_4$, extracted from the leaves of the coca plant by alcohol acidified with a small quantity of sulphuric acid. Cocaine, which is odourless, and has a bitter taste, crystallises in white monoclinic prisms, which melt at 93°, and are very soluble in ether, but only sparingly so in water. It is extensively used as a local anæsthetic in minor operations, especially, of the eye.

cō'-eą-in-işm, *s.* [Eng. *cocain(e)*; *-ism.*]

1. The habit of using cocaine as a stimulant.

2. The morbid condition induced by such habit.

cō-eą-in-i-zā'-tion, *s.* [Eng. *cocainiz(e)*; *-ation.*] The act or process of subjecting to the influence of cocaine.

cō'-eą in-ize, *v.t.* [Eng. *cocain(e)*; *-ize.*]

1. To anæsthetize by means of cocaine.

2. To subject to the influence of cocaine; to impregnate with cocaine.

co-eąl-lēr'-ą, *s.* [Brazilian.]

Pharm.: One of the names for a decoction of *Croton perdicipes*, used in Brazil as a cure for syphilis, and as a diuretic.

† cŏc'-ą-lūn, *s.* [Gr. κόκκαλος (*kokkalos*) = a kernel.]

Entom.: A large cocoon of a weak character. (*Ogilvie.*)

*** cŏc'-ą-triçe, * cŏc-ą-trỹce,** *s.* [COCKATRICE.]

cŏc-çăl'-ąng, *s. pl.* [Named from John Coccelius, or Cocken, who was born at Bremen, on August 9, 1603, and died, Professor of Divinity at Leyden, in 1669.]

Ch. Hist.: The followers of John Coccelius [etym.] He believed that the whole Old Testament history mirrored forth the history of our Saviour and of His Church. It was said that Coccelius finds Christ everywhere and Grotius nowhere in the Old Testament. The statement about Coccelius was correct; that regarding Grotius was not so. The followers of Coccelius were for a considerable time numerous and influential. (*Mosheim: Ch. Hist., Cent. XVII., &c.*)

cŏc'-çi-dæ, *s. pl.* [From Lat. *coccum*; Gr. κόκκος (*kokkos*) = a kernel, the cochineal berry, *i.e.* insect, and fem. pl. adj. suff. *-idæ.*]

Entom.: A family of Homopterous insects, called by Latreille Gallinsecta, *i.e.*, Gall Insects. They have apparently but one joint to the tarsi, and it furnished with only a single claw. The males have no rostrum but two wings, which when at rest lie horizontally on the body; the females are provided with a rostrum and are wingless. The species live on trees or plants, a different species on each. Their larvæ are like oval or round scales, on which account they are sometimes called Scale Insects. Many are British. [COCCUS.]

cŏc-çid i-ăm (pl. **cŏc-çid'-i-ą**), *s.* [Gr. κοκκις (*kokkis*), genit. κοκκίδος (*kokkidos*), dimin. of κοκκος (*kokkos*).] [COCCUS.]

Bot.: A form of conceptacle consisting of a globular tubercle with a free or confluent cellular wall, and not as a rule opening by a terminal pore. It occurs in the rose-spored Algæ.

cŏc-çĭf'-ĕr-oŭs, *a.* [Lat. *coccum*; Gr. κόκκος (*kokkos*) = a berry, and Lat. *fero* = to bear.] Bearing or producing berries; baccíferous.

cŏc-çī'-ną, *s. pl.* [Mod. Lat. *coccus* (q.v.), and neut. pl. adj. suff. *-ina.*]

Entom.: A tribe of the sub-order Homoptera, type Coccidæ.

*** cŏc-çin'-ĕ-ąn,** *a.* [Lat. *coccineus.*] Dyed scarlet or crimson colour. (*Blount.*)

cŏc-çin-ĕl'-la, *s.* [Dimin. of Lat. *coccinum*, *s.* = scarlet.]

Entom.: A genus of Beetles, the typical one of the family Coccinellidæ. They are generally beautifully coloured, having as a rule the elytra red with white spots. Sharpe enumerates eighteen species as British. *Coccinella septempunctata* is the Common Lady-bird.

cŏc-çin-ĕl'-li-dæ, *s. pl.* [Mod. Lat. *coccinella* (q.v.), and fem. pl. adj. suff. *-idæ.*]

Entom.: A family of Beetles, tribe Trimera, *i.e.*, having apparently only three joints to the tarsi. They are so convex above, while flat below, as to resemble little hemispheres. The antennæ areclavate. The animals when taken feign death. They are known as Lady-birds, and sometimes appear in large numbers. They are not merely harmless but useful to man, feeding on the Aphides, or Plant-lice, which destroy the plants. Sharpe enumerates twelve genera and forty-one species as British.

cŏc-çin'-i-ăl-ine, *a.* [Mod. Lat. *coccinella*, and Eng. suff. *-ine.*] Pertaining to, or characteristic of the Coccinellidæ (q.v.).

cŏc-çin'-i-ą, *s.* [Lat. *coccineus*, *coccinus* = scarlet.]

Bot.: A genus of Cucurbitaceæ, with dioecious flowers, having five stamens united into a column; the anthers in three parcels. The fruit is oblong, and has on it ten white lines. The fruit of *Coccinia indica*, a common wild Indian species, is eaten by the natives in their curries.

cŏc'-çin-in, *s.* [From Mod. Lat. *coccus*, and suff. *-ine* (*Chem.*).]

Chem.: $C_{14}H_{12}O_5$. A substance obtained by fusing carmine-red with potash, and dissolving the mass in water, acidifying with sulphuric acid, agitating the filtrate with ether and evaporating. Water extracts from the residue oxalic and succinic acids, and leaves Coccinin undissolved; it crystallizes from hot alcohol in microscopic rectangular tablets, which are very soluble in dilute alkalies, forming a yellow solution which on exposure to the air turns green, violet, and purple-red.

cŏc'-çin-ite, *s.* [In Ger. *coccinit*, from Lat. *coccinus*, *coccineus*; Gr. κόκκινος (*kokkinos*) = scarlet, and suff. *-ite* (*Min.*) (q.v.).]

Min.: A mineral of adamantine lustre and doubtful composition, occurring in reddish brown particles on selenid of mercury. (*Dana.*)

cŏc cŏb'-rỹ ŏn, *s.* [Gr. κόκκος (*kokkos*) = a kernel . . . the cochineal insect, and βρύον (*bruon*) = a mossy sea-weed, a lichen, a catkin.]

Bot.: A genus of plants, order Piperaceæ. *Coccobryon cupense* is used at the Cape as a stomachic.

cŏc-cō-car'-pi-dæ, *s. pl.* [Gr. κόκκος (*kokkos*) = . . . the cochineal insect; καρπός (*karpos*) = fruit, and Lat. pl. adj. suff. *-idæ.*]

Bot.: An Algals, order Ceramiaceæ (Rose-tangles), sub-order Cryptonemeæ.

cŏc-cō-chlōr'-i-dæ, *s. pl.* [Mod. Lat. *coccochloris*, and fem. pl. adj. suff. *-idæ.*]

Bot.: A family of Confervaceæ, sub-order Palmelleæ. They have the slimy substratum evident.

cŏc-cō-chlōr'-is, *s.* [Gr. κόκκος (*kokkos*) = . . . the cochineal insect, and χλωρός (*chlōros*) = pale green.]

Bot.: A genus of Algals, the typical one of the family COCCOCHLORIDÆ (q.v.). There are several species spreading on the ground, in moist situations or aquatic.

cŏc-cō-cỹp -sĕl ŭm, *s.* [Gr. κόκκος (*kokkos*) = a kernel, and κυψελη (*kupselē*) = a hollow vessel.]

Bot.: A genus of Cinchonads, with a vase-like fruit. *Coccocypselum repens* is a creeper with bluish-purple berries, a native of the West Indies, but cultivated here.

cŏc-cŏg'-nic, *a.* [From Gr. κόκκος (*kokkos*) = a kernel, and Lat. *gnidium*, with *gramm* understood = the seed of the Mezereon, from *Gnidius* = pertaining to Gnidus or Cnidus, a town of Caria, now in ruins.]

coccognic acid, *s.*

Chem.: An acid contained in the seeds of *Daphne gnidium.* It crystallizes in colourless prisms.

cŏc-cŏg'-nin, *s.* [From Gr. κόκκος (*kokkos*) = a kernel, and Lat. *gnidium.*]

Chem.: A crystalline colourless substance $C_{20}H_{32}O_6$, contained in the seeds of *Daphne Mezereum.* It is sparingly soluble in water and sublimes when heated.

cŏc-cŏl'-ite, *s.* [Fr. *coccolite*; from Gr. κόκκος (*kokkos*) = a berry; λίθος (*lithos*) = a stone.]

Min.: A white or green granular variety of pyroxene arranged by Dana under his variety Lime Magnesia Pyroxene or Malacolite (q.v.). The British Museum Catalogue makes it a variety of Diopside (q.v.)

cŏc'-cō-lĭth, *s.* [Gr. *κόκκος* (*kokkos*) = a kernel . . . the cochineal insect, and *λίθος* (*lithos*) = a stone.]

Biol. (*pl.*): The name given in 1858, by Prof Huxley, to one of certain minute oval or globular calcareous bodies found in countless numbers in the ooze of the Atlantic, either detached or adherent to small pieces of protoplasm. They have since been dredged up from other places, and found in chalk, and, according to Guembel, in limestone of all ages. It is now generally considered that they are Unicellar Algæ.

cŏc-cō-lō'-bă, *s.* [Gr. *κόκκος* (*kokkos*) = a kernel . . . the cochineal berry, now known to be an insect and not a berry, and *λοβός* (*lobos*)=a lobe, with reference to the character of the fruit.]

Bot.: A genus of plants, order Polygonaceæ. The calyx is 5-parted and ultimately becomes succulent; the corolla is wanting; the stamens are five, united by thin filaments into a ring; the styles 3; the stigma simple; the one-seeded nut being enveloped in the succulent enlarged calyx. *Coccoloba uvifera* is the Sea-side Grape, which grows on the shores of the West Indian Islands, Bermuda, and the continent of America. It has large glossy green leaves with red veins. The berries are eatable. It is an evergreen. It helps to bind together the sandy sea-coast, and protect it against the destructive effects of wind and sea. The wood is used for cabinet work. A red colouring matter in it is employed as a dye. The wood, leaves, and bark are astringent, and a decoction of them evaporated forms *Jamaica Kino.*

cŏc-cō-mĭl'-I-ō, cŏc-ō-mĭgl'-I-ō (*g* silent), *s.* [Ital.] A kind of plum growing in Calabria, the bark of which especially of the root—is highly esteemed by the Neapolitan faculty for its virtues in intermittent fever. (*Ogilvie.*)

cŏc'-cō-nēin, *s.* [From Gr. *κόκκος* (*kokkos*) = a kernel . . . a berry, and *νῆις* (*nēis*) = unpractised in a thing . . . powerless, feeble (?)]

Bot.: A genus of Diatomaceæ. Various species are British, some fresh-water, others marine.

cŏc-cō-nē'-mă, *s.* [From Gr. *κόκκος* (*kokkos*) = a kernel . . . a berry, and *νῆμα* (*nēma*) = that which is spun, yarn.]

Bot.: A genus of Diatomaceæ. *Cocconema lanceolatum* and *C. cistula* are common in fresh water.

cŏc-cō-sphēre, *s.* [Gr. *κόκκος* (*kokkos*) = a berry; Eng. *sphere* (q.v.).] The name given by Wallich and Huxley to a spherical mass of sarcode, or protoplasm, enclosed in a delicate calcareous envelope, and bearing coccoliths on its external surface. They are found in profusion in deep-sea ooze, or floating in tropical countries.

cŏc-cŏs'-tē-ŭs, *s.* [From Gr. *κόκκος* (*kokkos*) = a kernel . . . the berry like the cochineal insect, and *ὀστέον* (*osteon*) = a bone.]

Paleont.: A genus of ganoid fishes, section Placodermata, sub-order Ostracoidei. They have, however, affinities, as Prof. Huxley has pointed out, to the Teleostean Siluroids, with which, perhaps, they should be placed. There is a cephalic buckler covered with small hemispherical tubercles, the notochord was persistent, but the rays of the dorsal and ventral fins, as well as the neural and hæmal spines, are ossified. The tail was heterocercal. Coccosteus is a very characteristic organism of the Old Red Sandstone, occurring at Gamrie, in Orkney, Caithness, &c. It is found also in the Eifel country and in the Harts. The genus seems to have come into existence, however, in the Upper Silurian; species of that age having been found by M. Barrande in Bohemia.

cŏc-cō-thrāus'-tēs, *s.* [From Gr. *κόκκος* a kernel . . . a berry, and *θραύω* (*thrauō*), fut. *θραύσω* (*thrausō*) = to crush.]

Ornith.: Grosbeak. A genus of birds, the typical one of the sub-family Coccothraustinæ. There are two British species: *Coccothraustes vulgaris* (the Hawfinch) and *C. chloris* (the Greenfinch or Green Grosbeak). (See these English words.)

cŏc-cō-thrāus-tī'-næ, *s. pl.* [From Mod. Lat. *coccothraustes* (q.v.), and fem. pl. adj. suff. *-inæ* (q.v.).]

Ornith.: A sub-family of Conirostral Birds, family Fringillidæ. It contains the Grosbeaks. As their names import, they have thick bills fitted to crush berries. They have large wings, short tails, and stout feet. [Coccothraustes.]

• **cŏc-cow,** *s.* [Cuckoo.]

cŏc'-cŭle, *s.* [Dimin. of Gr. *κόκκος* = . . . a berry.] (For def. see extract.)

"Cocculus, a pericarp of dry elastic pieces, or *cocculus*, as in Dioscor. Dictamnus, Euphorbia." — *London Journal of Botany*, iii. 1. ch. ii.

cŏc'-cŭ-lŭs, *s.* [Coccule.]

Bot.: A genus of plants, order Menispermaceæ. Sepals 6 in 2 whorls, petals 6, stamens 3 or 6, ovaries 3, 6, or more; drupes one-celled, one-seeded. The genus consists of climbing plants with small, generally white or green, dioecious flowers and heart-shaped leaves. In general the species are bitter febrifuges. *Cocculus crispus*, a twining species with tubercles or warts on the stem, found in Sumatra and the Moluccas Islands, is used by the Malays in intermittent fevers. The root of what was formerly called *Cocculus palmatus* but is now designated *Jateorhiza palmata*, found in Mozambique and Oibo, is the Calumba-root of commerce, from which a bitter is obtained. [Calumba.] A decoction of the fresh roots of *C. villosus*, with a few heads of long pepper in goat's milk, is administered by the Hindoos in rheumatism and old venereal complaints, as is a green jelly for heat of urine. An ink is made from its fruit. In Arabia a spirit is distilled from the acrid berries of *C. Cebatha.*

cocculus indicus, *s.*

Comm., &c.: A popular name given to a species of Menispermaceæ, which furnishes certain dried berries constituting an article of commerce. They are imported into this country from the East Indies. There is no botanical species with this exact name. The plant which furnishes the berries, the *Menispermum Cocculus* of Linnæus, was called by De Candolle *Cocculus suberosus*, but Wight and Arnott have since removed it from the cocculus genus, and term it *Anamirta Cocculus.* The drupe resembles a round berry, the size of a pea or larger, wrinkled externally, and with a brittle husk. The kernel is intensely bitter. It contains about one-fiftieth of its weight of a powerful bitter narcotic poison called Picrotoxin (q.v.), also bases called Menispermine $C_{18}H_{24}N_2O_6$, a crystalline base, Paramenispermine, and several organic acids, &c. *C. indicus* is a deadly poison, is used to give a bitter taste to beer, and is thrown into rivers to kill the fish. It has been used in form of ointment in certain skin diseases. The popular notion that these berries were used to increase the intoxicating properties of porter is said, on the authority of an eminent analyst, to be erroneous.

cŏc'-cŭm, *s.* [Lat. *coccum* = a berry; Gr. *κόκκος* (*kokkos*).] [Coccus.]

Bot.: Gærtner's name for a kind of fruit, the same as Coccus, 2 (q.v.).

cŏc'-cŭs, *s.* [Gr. *κόκκος* (*kokkos*) = a kernel, . . . the cochineal insect, the female of which is so like a berry that it was long mistaken for one.]

1. *Entom.:* The typical genus of the family Coccidæ (q.v.). Many species are hurtful to plants in greenhouses and elsewhere. Gardeners call them bugs. *Coccus adonidum* (the Mealy Bug) does damage in hothouses, as does *C. Testudo. C. Vitis* (the Vine-scale) injures vines, and *C. Hesperidum* oranges. They may be destroyed by painting the branch on which they congregate with spirits of turpentine, or fumigating them with turpentine, tobacco, or sulphur. Others, however, are of value as dyes. *C. Cacti*, found on the Cactuses, is the Cochineal Insect. [Cochineal., *C. Ilicis*, found on *Quercus coccifera*, an evergreen oak in the south of France, furnishes a crimson dye which has long been known to mankind. *C. Polonicus* is used by the Turks as a red dye. *C. Lacca* yields lac. [Lac.]

2. *Bot.:* A shell; a carpel separating elastically from an axis common to it and the carpels. (*Treas. of Bot.*)

cŏc cyg'-ē-ăl, *a.* [Lat. *coccyx* (genit. *coccygis*) = Gr. *κόκκυξ* (*kokkux*) = a cuckoo; so from its resemblance to a cuckoo's bea

Anat.: Pertaining to or connected with coccyx, as the coccygeal bones, the coccygeal artery, the anterior and posterior coccygeal nerves, &c.

coccygeal gland, *s.*

Anat.: A gland varying in size from a lentil to that of a small pea, occupying a hollow at the tip of the coccyx.

cŏc-cyg'-ē-ăn, *a.* [Coccygeal.]

Anat.: The muscle which retains the coccyx in its place, and prevents it from being bent backward during the expulsion of the fæces. (*Dunglison.*)

cŏc-cyg'-gō-morph, *s.* & *a.* [Coccygomorphæ.]

A. *As adj.:* Belonging to or characteristic of the Coccygomorphæ (q.v.).

B. *As subst.:* Any individual of the Coccygomorphæ.

cŏc-cyg'-gō-mor'-phæ, *s. pl.* [Mod. Lat. from Gr. *κόκκυξ* (*kokkux*), gen. *κόκκυγος* (*kokkugos*) = a cuckoo, and *μορφή* (*morphē*) = form.]

Zool.: In Huxley's classification, a group corresponding to the Picarian birds, viz. the swifts, goatsuckers, and woodpeckers.

cŏc-cyg'-gō-mor'-phic, *a.* [Eng. *coccygomorph*; *-ic.*] The same as coccygeal (q.v.).

• **cŏc'-cyn,** *s.* [Lat. *coccinum.*] A scarlet colour.

"The marchaundises of purpur and cyn and . . ." —*Wyclif's Apocal.* xviii. 12.

cŏc-cyx-tēs, *s.* [From Gr. *κόκκυξ* (*kokkux*) a cuckoo.]

Ornith.: A genus of birds, family Cuculidæ, sub-family Cuculinæ. *Coccystes glandarius*, the Great Spotted Cuckoo, is a native of Africa, but a straggler has been met with in Ireland.

cŏc'-cyx, *s.* [Lat. *coccyx*; Gr. *κόκκυξ* (*kokkux*) = a cuckoo, the beak of which it resembles.]

Anat.: The lowermost portion of the vertebral column, consisting of four, or more rarely five or three, divided terminal vertebræ, which become more or less united into one with advance of age. They have been called *vertebræ.*

cŏc-cyg'-nī-næ, *s. pl.* [From Mod. Lat. *cygnus*, and fem. pl. adj. suff. *-inæ.*]

Ornith.: Hooked-billed Cuckoos, a family of birds, family Cuculidæ (Cuckoos). The nostrils are linear, the bill curved, the margin of the upper mandible dentated, the tarsus is naked and lengthened; the toes very long and cuneated.

cŏc cyg'-nŭs, *s.* [From Gr. *κόκκυξ* (*kokkux*) a cuckoo.]

Ornith.: The typical genus of the family Coccyzinæ (q.v.). The species are natives of America. *Coccyzus americanus* is the American Yellow-billed Cuckoo, has occasionally visited Britain.

• **cōch'-ēr,** *s.* [Mid. Eng. *coche* = coach.] A coachman.

• **cōch'-ēr-lĭngs,** *s.* [Cosherings.]

cōch'-I-nēal, *s.* [In Fr. *cochenille*, *coccinelle*, from Lat. *coccinus* = of a scarlet colour; *coccus* = a berry, kermes (q.v.).]

1. *Comm.:* Properly the dried female Cochineal insect, *Coccus cacti* [Coccus, insect.] A single pound of cochineal is supposed to contain no fewer than 70,000 dried individuals. It is used in dyeing scarlet, in the manufacture of scarlet and carmine, the colour being brought out and fixed by oxide of tin.

2. *Hist. & Law:* The Spaniards first discovered its value in 1518. It was introduced into Europe about 1523 and into India in 1795. Formerly there was a duty on cochineal

ported into England, but by 8 and 9 Vict., c. 93, passed in 1845, it was abolished.

cochineal fig, *s.* A cactus, *Opuntia cochinellifera*.

cochineal insect, *s.*

Entom.: *Coccus cacti*, the cactus insect being the *Cactus opuntia*, which grows in Mexico and other parts of Central America. *Cactus cochinifera* is another plant on which the insect feeds. The cochineal insect has been introduced from America into Spain and Algeria.

COCHINEAL INSECT ON CACTUS.

coch-lē-ą, *s.* [Lat. *cochlea* = a snail, a snail's shell; from Gr. κόχλος (*kochlos*) = a mollusc with a spiral shell, used for dyeing purple, murex.]

1 *Mach.*: An ancient engine of a spiral form; a screw jack.

2 *Hydraul.*: A spiral pump for raising water, introduced by Archimedes into Egypt.

3 *Anat.*: The anterior division of the internal ear. It consists of a gradually tapering spiral tube, the inner wall of which is formed by a central column or modiolus, around which it winds. (*Quain.*)

coch-lē-ga, *s.* [Mod. Lat. *cochlea*(a) (q.v.), and Eng. suff. *-ea*.] The same as COCHLEAR (q.v.).

coch-lē-ar, *s.* From Lat. *cochlear* = a spoon.]

1. *Anat.*: Pertaining in any way to the cochlea (q.v.).

2. *Bot.*: (*Of estivation*): A term used when one piece being larger than the other, and hollowed like a helmet or bowl, covers the rest, as in Aconitum, some species of perianate plants, &c. (*Lindley.*)

coch lē ar i-a, *s.* [From Lat. *cochlear* = a spoon, which the hollowed out leaves somewhat resemble.]

Bot.: A genus of plants, order Cruciferæ, sub-order Pleurorhizeæ, and the tribe Alyssineæ. The seed vessel (a silicule) is oval or globose, with turgid valves, having a prominent nerve in the middle; the seeds are many, not margined, tuberculate; the calyx is patent. Two very distinct species are British *Cochlearia Armoracia*, the Horse-radish, and *C. officinalis*, the Scurvy-grass. Two other supposed species have been added, *C. anglica* and *C. danica*, but they are properly only varieties of *C. officinalis*. The name Scurvy-grass was given because it was supposed to be of great value as an antiscorbutic. If eaten fresh it is stimulant and diuretic, but is feeble if allowed to dry before being taken.

cochlearia oil, *s.*

Chem.: The essential oil of Common Scurvy grass, *Cochlearia officinalis*. It boils at 160°, and consists of methyl-ethyl-thio-carbimide $S\overset{CS}{\diagdown\!\diagup}CH(CH_3)(C_2H_5)$.

coch-lē-ar i-form, *a.* [Lat. *cochlear* = a spoon, and *forma* = form, shape.]

Bot., Anat., &c.: Spoon-shaped.

Cochleariform process, processus cochleariformis:

Anat.: A small passage which lodges the tensor tympani muscle of the ear.

***coch-lē-ar-y,** *s.* [From Lat. *cochlearium* = a shell, a snail.] The same as COCHLEATE (q.v.)

"That at St. Denis, near Paris, hath wreathe spires, and *cochlearie* turnings about it."—*Browne: Vulgar Errours.*

coch-lē-ate, cōch-lē-at-ed, *a.* [Lat. *cochleatus* = spiral or screw-formed.]

1. *Ord. Lang.*: Circular, spiral.

2. *Bot.*: Twisted in a short spire so as to resemble the convolutions of a snail shell, as the legume of *Medicago cochlearis*, or the seed of Salicornia. (*Lindley.*)

cōch-lē-ōid, *a.* [Lat. *cochlea* (q.v.), and Eng. suff. *-oid*.] Spiral like a shell snail; cochleate. (*Durham.*)

cōch-lī-dī-ō-spēr-māte, *s.* [Gr. κοχλίδιον (*kochlidion*) = a small snail, and σπερμα (*sperma*) = a seed.]

Bot. (*Of seeds*): Concave on one side and convex on the other.

cōch-lī-ō-dōn'-tōid, *a.* & *s.* [From the stem of the second element of *cochliodus*; suff. *-oid*.]

A. *As adj.*: Pertaining to, or characteristic of the genus Cochliodus.

B. *As subst.*: Any individual of the genus.

cōch-lī-ō-dūs, *s.* [Gr. κοχλος (*kochlos*) = a shell-fish, and οδους (*odous*) = a tooth.]

Palæont.: A genus of sharks with lateral teeth, marked with sub-spiral ridges, and grooved like a univalve shell. They are found in the Carboniferous Limestone of Armagh and Bristol.

cōch-lō-spēr-mūm, *s.* [Gr. κόχλος (*kochlos*) = a mollusc with a spiral shell, and σπερμα (*sperma*) = seed.]

Bot.: A genus of plants, order Cistaceæ. *Cochlospermum Gossypium* is an Indian tree with large and magnificent bright yellow flowers, five-lobed, and five to six inches long. Royle says that it yields the gum Kuteera, which in the N.W. provinces of India is substituted for tragacanth. A decoction of the roots of *C. insigne* is used in Brazil in internal pains, especially if these have been produced by falls or accidents; it is also given to heal abscesses. *C. tinctorium* is prescribed in amenorrhœa, besides furnishing a yellow dye. (*Lindley.*)

* **cock-cure,** *s.* [Mid. Eng. *cocke* = couch; *cure* = *er*.] One who lies on a couch.

"He makyth me to swelle both flesshe and veyne,
And kepith me low lyke a *cockcure*."
Nugæ Poetica, p. 36

cō-çin'-ic, *a.* [From Eng., &c., *cocoa* (1), and suff. *-inic*.] Pertaining to or derived from cocoa or the cocoa-nut.

* **cocinic acid,** *s.* [COCOA-NUT OIL.]

1. *Ord. Lang.*: Any species of the subfamily of birds described under No. 2.

2. *Ornith.* (*pl.* Cockatoos): The name given to the birds of the family Psittacidæ, subfamily Cacatuinæ, the same that was called by Swainson Plyctolophinæ. They have a large head, ornamented with a folding or procumbent crest, a short very broad bill with the culmen of it very much curved. The tail is lengthened and broad, the feathers not narrowed. Besides their peculiar utterance "cockatoo," from which they derive their name, screamed out harshly, they are not able to acquire more than a few words, their imitative power being but slight. They inhabit Australia and the Eastern Islands, living in woods, and feeding chiefly on seeds and fruits, which their bills are well adapted to crush. They also eat insects. The species most frequently brought to England are the Great Sulphur-crested Cockatoo, *Cacatua galerita*, and the Small Sulphur-crested Cockatoo, *C. sulphurea*. They are white with yellow crests. They become thoroughly domesticated.

"Here are also—in the Mauritius] herons white and beautiful. . . *cacatoes*, a sort of parrot, whose nature may well take name from narrow soles, it is so fierce and so indomitable." *—Sir T. Herbert: Travels*, p. 333.

cŏck-ă-trĭce, * **cŏc'-ă-tryce,** * **kŏk'-ă-trĭce,** *s.* [O. Fr. *cocatrice* = a crocodile; from Low Lat. *cocatricem*, acc. of *cocatris* = a crocodile, a basilisk: a corruption of Low Lat. *crocodrillus* = a crocodile. "The *r* being dr-ped, as in Sp. *cocodrilo*, Mid. Eng. *cokedrill*, the fable that the animal was produced from a cock's egg was invented to account for the name." (*Skeat.*)] [BASILISK, CROCODILE.]

I. *Ordinary Language*:

1. *Lit.*: A basilisk, a fabulous serpent supposed to have been produced from a cock's egg hatched by a serpent. Its breath and even its look were believed to have been fatal to any who came within their influence.

"*Cocatrypes. Basiliscus, cocodrillus.*"—*Prompt. Parv.*

"For, behold, I will send serpents, *cockatrices*, among you, which will not be charmed, and they shall bite you, saith the Lord."—*Jer.* viii. 17.

*2. *Figuratively*:

(1) Anything venomous or deadly.

"This was the end of this little *cockatrice* of a king, that was able to destroy those that did not espy him first."—*Bacon.*

(2) A courtesan, a harlot.

II. *Technically*:

1. *Her.*: For the difference between a basilisk and an amphisien cockatrice, see BASILISK.

2. *Scrip*: The word "cockatrice" occurs four times in the text and once in the margin of the authorised version of the Bible. In four of these passages, viz., Prov. xxiii. 32 (margin), Isa. xi. 8, lix. 5, Jer. viii. 17, the word is "ְפֶתֶן (*tsiphōnî*), and in one, viz., Isa. xiv. 29, it is צֶפַע (*tsepha*). Tsiphoni means that which is generated from a serpent, hence a serpent itself. Tsepha, which is from the same root, is a serpent's progeny. It evidently means a very venomous serpent, but it will be observed that no countenance is given in Scripture to the fable about the origin of the cockatrice, or to any other of the myths that of old clustered so thickly around that animal of now fallen fame.

Cŏck-ăyne, * **Coc-agne,** *s.* [Fr. *cocagne*; O. Fr. *cocaigne*; Ital. *cuccagna, cuccagna*; from *cucca* = dainties, sweetmeats; from Lat. *coquo* = to cook; from the belief that the houses in this fabulous land were covered with cakes.]

1. A fabulous or imaginary land, the home of luxury and idleness.

I. *Ordinary Language:*

1. The popular name of the shells classed by naturalists under the genus Cardium, or the family Cardiidæ. Their appearance is familiar. Forbes and Hanley enumerated thirteen species of Cardium as British. The most common one is *Cardium edule*: it is the one to which the name cockle is most frequently applied. It is found in sandy bays near low water. A small variety is met with in the brackish water of the Thames as high as Gravesend. The name is also loosely applied to some other bivalves. In the Hebrides *Mya truncata* is so called, and, more fully, the lady-cockle. It is sometimes used of the scallop, and was formerly used of the oyster.

*** 2.** A ringlet, a curl.

"To curl the *cockles* of her new-bought head."

Entom.: Generally, any insect of the family Blattidæ, or, at least, of the genus Blatta; and *specially Blatta orientalis*, so common in houses, particularly in seaport towns. The Cockroach is said to have come originally from India, through the Levant. It is often called the Blackbeetle, an erroneous name, for it is not a beetle at all, but an orthopterous insect. [ORTHOPTERA.] When the male is mature it has wings half the length of the body, while those of the female are but rudimentary. It is nocturnal in its habits. Its appetite is omnivorous. It leaves an unpleasant smell on provisions which it has been unable to devour. The eggs are deposited in horny cases, in which they are arranged with much regularity, in two rows, with a central partition, and smaller ones isolating each egg from the other. [BLATTA, BLATTIDÆ.]

cō-cō (2), *s.* [COCOA (2).]

¶ *Le Petit Coco:* A name given in San Domingo to a tree, *Theophrasta Jussieui*, from the pounded seeds of which bread is prepared.

cō-cōa (1), *s.* [In Fr. *coco*, but Littré considers that the French word comes from the English one; Port. *coco*, probably a contraction of *macaco*, *macaco* = a kind of monkey, to the face of which the cocoa-nut, with the three scars upon one end of it, was thought to bear a resemblance.]

1. *Of the forms* cocoa *and* coco (but of these *coco* exists only in the compound *coco-nut*, *cocoa-nut*): The fruit of the palm described under 2. [COCOA-NUT.]

2. One of the best known and the most prized of all the palm-trees. It is the *Cocos nucifera* of botanists. [COCOS.] Its appropriate habitat is the coast of islands or continents, between 25° of Northern and the same parallel of Southern latitude; thus it abounds along the coasts of the South Sea Islands, of India, of South America, and other places. It is sometimes found inland, even to the elevation of 2,900 feet above the sea, but it does not abound or flourish away from the sea; thus while there are many millions of them along the sea-coast of India, considerable regions in the interior may be traversed without more than two or three cocoa-nuts being seen. The tree rises to the height of sixty to ninety feet. The stem is slender and marked by transverse rings, being the scars left by leaves now fallen. At Bombay and elsewhere the natives may be seen climbing up the cocoa-nut trees by means of those rings, and descending again with the fruit, their frail support against falling being a rope made into a large loop encircling their waist and the stem of the tree. Some palms have fan-shaped leaves, others are "feathery palm-trees." The cocoa-nut belongs to the latter category; its leaves, generally 12—15 in number, like gigantic ostrich-feathers, exist in a bunch or tuft at the summit of the unbranched stem. A tree produces about 80 or 100 nuts annually. The uses of the cocoa-nut tree are innumerable. For those of the
